What Weed Control district do you live in? DISTRICT 2

Visit www.snoco.org, search "weed control districts" for a map.

Or go to this direct link: <https://snohomishcountywa.gov/6580/Noxious-Weed-Control-Districts-Map>.

Please provide a brief description of your background, including your experience with or involvement in agricultural production activities:

Having raised goats, sheep and horses for 20 years while growing up on a small family farm, I am well versed in livestock/animal husbandry and pasture management. I have continued to expand my knowledge and skills during the stewardship of our current 5-acre farm in Arlington, where we keep horses, goats and gardens for pleasure. I was first introduced to the value of local resources for landowners by working with the Snohomish Conservation District to develop a Farm Plan and renovate our newly purchased property, nearly 15 years ago. Having subsequently attended Pasture Management courses and by utilizing other county resources in identifying and mitigating invasive weeds and insects, I have developed a strong belief in the value of local resources in educating and empowering property owners to be responsible stewards of their land.

Lastly, I was exposed to the horticultural and nursery trades from a young age via my mother's landscape design company and went on to own a custom event-floristry company for 10 years. Through my business, I personally grew some specialty cut-floral material and regularly visited sustainable, specialty cut-flower farms (primarily in the Skagit Valley.) Having gardened since childhood, I now keep perennial and annual ornamental gardens, as well as a vegetable garden alongside our grazing pastures and bordering forested land. I am familiar with the origin of many invasive weed species as escaped ornamentals, as well as the potential for spread (as we have personally experienced) within agricultural products such as grain, seed and hay. I have a basic understanding of plant classification, identification, and growth cycles/propagation which I employ on our own farm, where we use mechanical methods of weed control/removal whenever possible, utilizing chemical control only when absolutely necessary, and avoiding Persistent Herbicides entirely.

Please explain why you are interested in becoming a member of the Snohomish County Noxious Weed Control Board:

As an owner of grazing livestock, member of the equestrian community and neighbor to similar rural residential and agricultural properties, I have a personal interest in the elimination of toxic, mechanically injurious, and ecologically harmful plant species. I have first-hand experience with rural-residential property maintenance and the process by which you must continually monitor, identify, and research control methods for harmful plant species in order to prevent their spread. I understand the significant time, labor and potential economic investments landowners must make when an invasive weed species is introduced and I aim to use that experience to represent the perspective of rural landowners. I believe that education and assistance with identification is the most important tool, and that enforcement is the final step only if needed to protect natural resources, ecosystems, and agricultural productivity. I've also experienced the impacts of invasive weeds spreading from neighboring properties and contaminated feedstuffs, and so understand the importance of prompt control. It is my hope that my particular perspective can be of value to the greater, shared goal of a safe, enjoyable, ecologically sound and productive county and state for citizens from all locations and backgrounds.

Please include at least ten (10) signatures of registered voters in your district who support your application to serve on the Noxious Weed Control Board:

Lynne Sheppard John Sheppard Margot D Grim
Nicole Anderegg James Richard Anderegg Megan Stelljes
Jeremy Apland
