# METAL GRID, MOISTURE CONTROL SYSTEM (MCS)

The Brick-It™ Moisture Control System (MCS) is the only system in the world that was especially designed to answer all moisture concerns and for which was awarded a US & Canada Patent. Brick-It™ MCS is the best way to install exterior thin brick because the metal grid was designed to:

- Brick It MCS system is the only thin brick veneer installation system that was awarded US Patent for its water and moisture drainage capabilities.
- High impact drainage mat provides rapid exit for water which is naturally absorbed by brick.
- Create perfectly aligned brick veneer every time, and the interlocking feature and structural panel shape provides equal weight distribution of the bricks, reinforces the building corners and gives additional support to the wall itself.
- Offset panel weep holes redirect 100% of water every 8 inches (vertically) from the front to the back of the panel.
- Drainage mat drains the water and keeps it free air flow between the veneer and the wall.
- Compartmentalized channels promote pressure equalization.
- Rectangular weep holes punched from the front of the panel assure that water goes in to it and not around it.

## COMPLETE SYSTEM

**Moisture Control Panel (MCS)** is now available to accommodate all thin brick sizes; 2 1/4" H (Modular, Standard, Norman, Saxon), 2 1/2" H (Modified Standard, Modified Norman), 2 5/8" H (Queen) 2 3/4" (King, Kingston), 3 5/8" H (Closure/Econo, Utility, Titan), 7 5/8" H (8-Square, Double Utility).

**BRICK - IT™**  
MOISTURE CONTROL SYSTEM (MCS)
