ANTI-RAM RATINGS

The U.S. Department of State published SD-STD-02.01 Certification Standard: Test Method for Vehicle Crash Testing of Perimeter Barriers and Gates during 1985. The standard was comprised of three vehicle speeds and reported three static penetration distances measured from the front bumper of a medium duty truck of ≤ 3.3 ' (L3), ≤ 20 ' (L2) & ≤ 50 ' (L1). Revised in 2003, the standard was updated to measure kinetic pentation from leading edge of truck bed and only recognized a penetration distance of ≤ 3.3 LF (L3).

ASTM International introduced F2656 Standard Test Method for Vehicle Crash Testing of Perimeter Barriers during 2007. This comprehensive standard includes six test vehicles with as many as four speed variations per vehicle and three penetration zones that report distances greater than 98LF. The DOS has adopted the use of F2656 thus no longer requiring their standards.

PAS 68 IWA-14 EUROPEAN STANDARDS

The British Standards Institution developed PAS 68 as its first impact test specification during 2005. Similar to F2656, the PAS 68 standard allows for multiple test vehicles at various speeds, yet indicates the specific vehicle penetration distance and debris measurement.

In 2013, several agencies collaborated to develop the IWA-14 standard, this standard combines elements from F2656 and PAS 68. The distinct differences being minor vehicle weight variations, the location point for measuring at the barrier and no debris value.
