Review Note for Page No.	School District Sign-Off	Suggested Correction(s)/Potential Issues
Pg 4		Map does not include Stillaguamish Valley School, supportive services location or transportation facility. Additionally, map shows the vicinity of schools, but is not precise enough to show facility locations. To meet requirements of Appendix F, either a more detailed map should be provided or the map could be supplemented with a table listing the addresses of the school facilities.
Pg 6		"Handicapped" is outdated/potentially offensive language to refer to people with special needs/disabilities.
Pg 9 Table 1		Table 1 Site acreage does not add up. (23.70+10.1+12.4+20.60=66.8 not 66.62)
Pg 10		Text on page 10 regarding number of relocatable classrooms (11) doesn't match the total of 13 shown in Table 4
Pg 11		Appendix F requires the location and description of all district owned or leased sites and properties. Location of transportation site is missing. Is the Old HS A bldg. located on the same site as current Arlington High School or a different location?
Pg 12		On page 12, first paragraph, the Lakewood School District is incorrectly referred to instead of the Arlington School District
Pg 12 Table 6, Page 15 Table 8B, Appendix A		Table 6 on Page 12 reports total actual district enrollment as of October 2021 of 5374. Table 8B on Page 15 reports enrollment total of 5301 with Elementary enrollment at 2265, Middle enrollment at 1219 and High School at 1817. Appendix A reports Actual Enrollment as of October 2021 total of 5,305 (K-5 2247, 6-8 1279, 9-12 1779). Why are the numbers different? Which is correct?
Pg 12		Text references OFM projections and refers reader to Appendix A. Appendix A contains only OSPI projections (A-1) and FLO projections (A-2)
Pg 15 Table 8B		Table 8B. According to Appendix A-2, the 2021 enrollment for middle school was 1,292 not 1,219. Therefore the surplus is 77 not 150.
Pg 15, Table 8B		Middle School – 2027 column should be 0 for surplus.
Pg 18, Table 9		Title should say "Costs in thousands," not millions
Pg 20

Review Note for Page, No.	School District Sign-Off	Suggested Correction(s)/Potential Issues
Page 8, Table 1		Please include a comparison of your OSPI and FLO Analytics 2021-2027 student enrollment projections (Table 1 on page 8) with the results of a student enrollment projection through 2027 using a ratio method with the county's OFM total population projection for the Edmonds District. And then provide a rationale for the enrollment projection selected for CFP purposes. A comparison of this information with the District's selected student enrollment projection (an average of the OSPI and FLO Analytics projections) would be important to see since the OFM-based total population projection for the Edmonds SD shows significant population growth of 25,144 (14.2%) between 2020 (177,466) to 2027 (202,610).
Page 5, 2 nd paragraph		The CFP should be developed in accordance with GMA and the County Code chapter 30.66C that includes a Appendix F (requirements for school CFPs). Missing is a bullet for future enrollment forecasts and a bullet for minimum level of service (LOS) and how the District is meeting that LOS. Please use Appendix F as a guide for what the CFP should contain: Attached is a copy of Appendix F.
Page 8		Using data from the 2019 Flo Analytics report is not using the most up to date information – there has been a lot of development in and near the Edmonds school district boundaries.
P8, Table 2		Totals for 2023 and 2026 do not match listed total (10,772+3,003+6,436= 20,211, not 20,212 and 10,618+3,037+6,309= 19,979 not 19,978)
Page 8, Table 2		The Totals for 2023 and 2026 are incorrect. For the 2020 Edmonds CFP, there was an "Enrollment Committee" that help to draft the projected student enrollment to 2038 – did that committee not convene for this CFP update?
Page 12, 4th paragraph		The CFP states, "The application of these classroom staffing ratios and capacity standards to the District's current educational program causes average classroom utilization to be approximately 90%." However, on Tables

		4-6, and 11 capacity is based on maximum capacity. Is using maximum capacity realistic for calculating capacity?
Page 13 – 1 st sentence		States that, "...In the event of overcrowding, the District may remediate by using facilities differently or continue adding relocatable classrooms." Can you please show how the use of portables or using facilities is being used for addressing capacity issues.
Pages 12 & 13 -		Minimum Levels of service – should be a specific number, please update the Minimum LOS with a specific number and perhaps include a table with MLOS and how it is currently being met – see other school districts CFP for examples. Under minimum levels of service, the plan reports maximum total capacity by school type (elementary, middle, high). Level of service for schools is reported in terms of maximum class size (which is different than the educational standard that was discussed earlier in the plan). What is the minimum level of service for each grade level? Is the district meeting its levels of service? <ul style="list-style-type: none"> The District's student to classroom teacher ratio for staffing purposes for grades K-1 is 21.5 students, 24 students for grades 2-6. Current capacity for new elementary schools is based upon a District-wide Educational Specification which assigns a range of approximately 21-27 classrooms for K-6 or K-8 basic educational program and two or more classrooms for self-contained resource or program-specific activities.
P19, Table 4		The Meets Facility Service Standard column is blank.
P20, Table 6		Total Site Size (acres) is incorrect ($28.5+40.4+40.0+33.2=142.2$ not 141.2)
P 21		Appendix F asks for information on portables to include information on remaining useful life (as appropriate to educational standards).
Page 23, Table 11		Table 11 – There are computation errors in the table – please recalculate. Is there a capacity issue at the high school level? Table 11 uses the maximum capacity from Tables 4-6; however, is this realistic? Can you please include in Table 11 how portables are used to address capacity – understanding that portables are not a considered a permanent solution. Adding in the current temporary (relocatable) capacity listed in Table 7 for the high school level (1 relocatable classroom at Edmonds-Woodway High and 4 at Meadowdale High with a total student capacity of 120 student) and the high school level still appears to be showing a significant shortfall. Future growth is projected to increase this shortfall. None

		of the capital projects listed in this capital facility plan are for the high school level. How is the District planning on addressing the high school shortfall in capacity during the next 6 years? for capacity issues.

Review Note for Page No.	School District Sign-Off	Suggested Correction(s)/Potential Issues										
Pg 19 Table 10		Proposed Chain Lake Expansion listed in 'Improvements adding Permanent Capacity' for Elementary Schools total cost \$7.75+\$6=13.75, not \$11.75 as listed										
Pg 19 Table 10		In the 'Improvements Not Adding Capacity' under Elementary Schools, 'Proposed Chain Lake Elementary Expansion' should be changed to 'Proposed Chain Lake Elementary Modernization' like the other projects listed.										
Pg 24 Table 12 Impact Fee Variables		Chain Lake Elementary Expansion total cost of \$13,750,000 not included in Projected Student Capacity for Facility or in Facility Construction. However, it is listed on page 19 Table 10 in Planned Construction adding Permanent Capacity with costs in 2026 and 2027. Page 16 lists Chain Lake under 'Anticipated Future Bond Projects' to add new capacity of 88 students to be completed 2027-28. Table 11 Capacity Analysis for Elementary Schools has a note that 'Anticipated capacity additions at Chain Lake are not included at this time though they may come on line in 2027 or shortly thereafter.' Consider removing reference to Chain Lake expansion or add it consistently to reference tables and impact fee calculations.										
Pg 20, Table 11		High School enrollment for 2027 does not match number in Appendix A-1, surplus will need to be recalculated										
Pg 24, Table 12		High school total facility square footage is incorrect (245,122 +7,560 =252,682 not 255,862)										
Pg 25		Table 13 – is the fee of \$2112 supposed to be applied to MF 2+ BR as indicated in page D-5? If so it is listed in MF one BR not in the MF 2+ BR.										
Pg 25		Footnote should refer to Table 13, not Table 10										
Pg 25		Would the proposed impact fee for Multi-family also include Townhomes? The County impact fee table has a separate category for Townhomes. Historically, the County has applied the MF+2 impact fee to the Townhome column : <div>Table 30.66C.100(1) School Impact Mitigation Fees</div> <table><tr><td>SCHOOL DISTRICT</td><td>SINGLE FAMILY per dwelling unit</td><td>MULTI-FAMILY 1-BEDROOM per dwelling unit</td><td>MULTI-FAMILY 2+ BEDROOMS per dwelling unit</td><td>DUPLEXES AND TOWNHOMES per dwelling unit</td></tr><tr><td></td><td></td><td></td><td></td><td></td></tr></table>	SCHOOL DISTRICT	SINGLE FAMILY per dwelling unit	MULTI-FAMILY 1-BEDROOM per dwelling unit	MULTI-FAMILY 2+ BEDROOMS per dwelling unit	DUPLEXES AND TOWNHOMES per dwelling unit					
SCHOOL DISTRICT	SINGLE FAMILY per dwelling unit	MULTI-FAMILY 1-BEDROOM per dwelling unit	MULTI-FAMILY 2+ BEDROOMS per dwelling unit	DUPLEXES AND TOWNHOMES per dwelling unit

Chapter 30.66C

SCHOOL IMPACT MITIGATION

Sections:

30.66C.010	Purpose and applicability.
30.66C.020	School impact fee eligibility.
30.66C.030	Expiration of district plans.
30.66C.035	Updating of district plans.
30.66C.040	Minimum requirements for district capital facilities plans.
30.66C.045	Impact fee calculation formula.
30.66C.050	Department review and transmittal.
30.66C.055	District capital facilities plan and fee adoption.
30.66C.060	Correction of deficiencies.
30.66C.065	Delays.
30.66C.100	Fee required.
30.66C.110	Impact fee schedule - exemptions.
30.66C.120	Service areas established.
30.66C.130	Impact fee limitations.
30.66C.150	Credit for in-kind contributions/existing lots.
30.66C.160	SEPA mitigation and other review.
30.66C.200	Collection and transfer of fees.
30.66C.210	Use of funds.
30.66C.220	Refunds.
30.66C.230	Reimbursement for county administrative costs, legal expenses, and refund payments.
30.66C.300	Administrative adjustment of fee amount.
30.66C.310	Appeals of decisions - procedure.
30.66C.320	Arbitration of disputes.

30.66C.010 Purpose and applicability.

(1) The purpose of this chapter is:

- (a) to ensure that adequate school facilities are available to serve new growth and development; and
 - (b) to require that new growth and development pay its proportionate share of the costs of new school facilities.
- (2) This chapter shall apply to all development, except for the following:
- (a) Development that
 - (i) was the subject of a prior SEPA threshold determination that resulted in the imposition of school mitigation conditions under chapter [30.66C](#) SCC as codified prior to January 1, 1999; and
 - (ii) has not undergone modifications or other administrative revisions following issuance of the SEPA threshold determination. An applicant subject to a prior version of this chapter may consent in writing to the application of this chapter.
 - (b) Permits for attached or detached accessory dwelling units.
 - (c) Permits for remodeling or renovation.
 - (d) "Housing for Older Persons" as defined by [42](#) U.S.C. § [3607\(2\)](#), when guaranteed by a restrictive covenant.
 - (e) Permits for temporary dwellings.
 - (f) Permits for new single-family detached units and duplexes constructed on legal lots created prior to May 1, 1991.
 - (g) Building permits for residential development on or located within:
 - (i) existing lots recognized through the administrative lot status process pursuant to SCC [30.41A.030](#) or SCC [30.41B.025](#);
 - (ii) unrecorded short plats filed with the county prior to September 12, 1972, and pursuant to SCC [30.41B.025\(2\)](#); and
 - (iii) exempt subdivisions or large tract subdivisions, including five acre segregations pursuant to SCC [30.41A.030\(1\)](#) or SCC [30.41B.025\(1\)\(a\)](#), 20-acre segregations pursuant to SCC [30.41A.030\(2\)](#) or [30.41B.025\(1\)\(b\)](#), and 80-acre segregations pursuant to SCC

[30.41A.020\(7\)](#) or SCC [30.41B.020\(7\)](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 04-140, Jan. 12, 2005, Eff date Jan. 29, 2005; Amended by Amended Ord. 21-018, June 9, 2021, Eff date June 19, 2021).

30.66C.020 School impact fee eligibility.

(1) Any district serving the county shall be eligible to receive school impact fees upon adoption by the council of a capital facilities plan for the district by reference as part of the capital facilities element of the comprehensive plan.

(2) A condition of eligibility shall be that a district must provide documentation that it has petitioned every other city and/or county served by that district to establish a school impact fee or mitigation program. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.030 Expiration of district plans.

For purposes of impact fee eligibility, a district's capital facilities plan shall expire two years from the date of its adoption by the council, or when an updated plan, as required in Appendix F of the comprehensive plan, is adopted by the council, whichever date first occurs. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.035 Updating of district plans.

(1) A district's capital facilities plan shall be updated by the district and transmitted to the county by the district at least 60 days prior to its biennial expiration date. The district's updated plan shall be submitted by the department to the council for its consideration within forty-five (45) days of the department's receipt of complete and accurate information as required in Appendix F of the comprehensive plan. In the event any district desires to amend its capital facilities plan prior to the biennial expiration date, the district may propose an amendment to be considered by the county pursuant to the procedures established by Appendix F. Such amendments shall be considered by the county no more than once per year unless the board of directors of such district declares, and the county finds, that an emergency exists.

(2) A district's updated capital facilities plan may include revised data for the fee calculation and a corresponding modification to the impact fee schedule, consistent with the comprehensive plan and SCC [30.66C.040](#) through [30.66C.065](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.040 Minimum requirements for district capital facilities plans.

To be eligible for school impact fees, districts must submit capital facilities plans to the county pursuant to the procedure established by this chapter. District capital facilities plans shall contain data and analysis necessary and sufficient to meet the requirements of the GMA and Appendix F of the comprehensive plan. The plans must provide sufficient detail to allow computation of school impact fees according to the formula contained in SCC [30.66C.045](#). Additional elements may be contained within a school district capital facilities plan, provided that any such additional elements are consistent with those mandatory elements outlined in Appendix F. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.045 Impact fee calculation formula.

(1) *General.* The formula in this section provides the basis for the impact fee schedule for each district serving the county. District capital facilities plans shall include a calculation of its proposed impact fee schedule, by dwelling unit type as provided in SCC [30.66C.100\(1\)](#), utilizing this formula. In addition, a detailed listing and description of the various data and factors needed to support the fee calculation is included herein.

(2) *Determination of projected school capacity needs.* Each district shall determine, as part of its capital facilities plan, projected school capacity needs for the current year and for not less than the succeeding five-year period. The capital facilities plan shall also include estimated capital costs for the additional capacity needs, and those costs provide the basis for the impact fee calculations set forth in this section.

(3) *Cost calculation by element.* The fees shall be calculated on a "per dwelling unit" basis, by "dwelling unit type" as set forth below.

(a) *Site acquisition cost element.*

$$\{[B_{(2)} \times B_{(3)}] \div B_{(1)}\} \times A_{(1)} = \text{Site Acquisition Cost Element}$$

Where:

$B_{(2)}$ = Site Size (in acres, to the nearest 1/10th)

$B_{(3)}$ = Land Cost (Per Acre, to the nearest dollar)

$B_{(1)}$ = Facility Design Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added with the result being the "Total Site Acquisition Cost Element" for purposes of the final school impact fee calculation below.

(b) *School construction cost element.*

$$[C_{(1)} \div B_{(1)}] \times A_{(1)} = \text{School Construction Cost Element}$$

Where:

$C_{(1)}$ = Estimated Facility Construction Cost

$B_{(1)}$ = Facility Design Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added and multiplied by the square footage of permanent facilities divided by the total square footage of school facilities, with the result being the "Total School Construction Cost Element" for purposes of the final school impact fee calculation below.

(c) *Relocatable facilities (portables) cost element.*

$$[E_{(1)} \div E_{(2)}] \times A_{(1)} = \text{Relocatable Facilities Cost Element}$$

Where:

$E_{(1)}$ = Relocatable Facilities Cost

$E_{(2)}$ = Relocatable Facilities Student Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added and multiplied by the square footage of relocatable facilities divided by the total square footage of school facilities, with the result being the "Total Relocatable Facilities Cost Element" for purposes of the final school impact fee calculation below.

(4) *Credits against cost calculation - mandatory.* The following monetary credits shall be deducted from the calculated cost elements defined above for purposes of calculating the final school impact fee below.

(a) *State match credit.*

$D_{(1)} \times D_{(3)} \times D_{(2)} \times A_{(1)}$ = State Match Credit

Where:

$D_{(1)}$ = Boeckh Index

$D_{(3)}$ = Square footage of school space allowed per student, by grade span, by the Office of the Superintendent of Public Instruction

$D_{(2)}$ = State Match Percentage

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added with the result being the "Total State Match Credit" for purposes of the final school impact fee calculation below.

(b) *Tax payment credit.*

$\{[(1 + F_{(1)})^{10}] - 1\} \{F_{(1)}(1 + F_{(1)})^{10}\} \times F_{(2)} \times F_{(3)}$ = Tax Credit

Where:

$F(1)$ = Interest Rate

$F(2)$ = District Property Tax Levy Rate

$F(3)$ = Average Assessed Value (for each dwelling unit type)

(5) *Adjustments against cost calculation - elective by district.* Recognizing that the availability of other sources of public funds varies among districts, each district may provide an additional credit against school impact fees which the district determines will provide the best balance in system improvement funding within the district, between school impact fees and other sources of local public funds available to the district. This adjustment may reduce, but may not increase, the school impact fee from the amount determined by application of the elements identified above. The adjustment, if any, applied by the district shall be specified within the district's capital facilities plan adopted by the county.

(6) *Calculation of total impact fee.*

(a) The total school impact fee, per dwelling unit, assessed on a development activity shall be the sum of:

Total Site Acquisition Cost Element

Total School Construction Cost Element

Total Relocatable Facilities Cost Element minus the sum of:

Total State Match Credit

Total Tax Payment Credit

Elective Adjustment by District expressed in Total Dollars per Dwelling Unit, by Dwelling Unit Type.

(b) The total school impact fee obligation for each development activity pursuant to the school impact fee schedule of this ordinance shall be calculated as follows:

Number of Dwelling Units, by Dwelling Unit Type multiplied by School Impact Fee for Each Dwelling Unit Type less the value of any in-kind contributions proposed by the school developer and accepted by the school district, as provided in SCC [30.66C.150](#). (Added by

Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 15-005, Mar. 18, 2015, Eff date Apr. 2, 2015).

30.66C.050 Department review and transmittal.

- (1) Upon receipt of a district's capital facilities plan (or amendment thereof) the department shall determine whether the plan meets the following requirements:
 - (a) the required plan contents and plan performance criteria outlined in Appendix F of the comprehensive plan are included in the document;
 - (b) The analysis contained within the district capital facilities plan is consistent with current data developed pursuant to the requirements of the GMA and Appendix F;
 - (c) Any school impact fee proposed in the district's capital facilities plan has been calculated using the formula contained in SCC Table 30.66C.050(1) of this chapter; and
 - (d) The district capital facilities plan has been adopted by the district's board of directors.
- (2) Upon finding that these requirements have been satisfied, the department shall transmit the district capital facilities plan to the planning commission.
- (3) The director is authorized to adopt policies and procedures for the establishment and operation of a technical review committee to assist the department in its review of capital facilities plans and the student factor methodologies used to support the plans. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.055 District capital facilities plan and fee adoption.

Any school district capital facilities plan adopted by the county council shall be incorporated into the capital facilities element of the county's comprehensive plan. Adoption of the district capital facilities plan shall constitute adoption of the schedule of school impact fees specified in the district's capital facilities plan as modified by SCC [30.66C.100](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.060 Correction of deficiencies.

Prior to its adoption by the council, should the department find a district's capital facilities plan to be deficient in any way, the department shall notify the district of the deficiency, identifying the specific matters found to be deficient, and shall indicate the standard for correction. The district shall then have forty-five (45) days (or such longer period as may be necessary to comply with applicable legal requirements) to correct the deficiencies and resubmit its revised, adopted capital facilities plan. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.065 Delays.

If a district fails to submit its biennial update of the district capital facilities plan at least 60 days before the expiration date, or if the department notifies a district of deficiencies in the district's proposed capital facilities plan and the district fails to correct identified deficiencies within 45 days (or such longer period as may be necessary to comply with applicable legal requirements), the department shall endeavor, but shall not be obligated, to complete review prior to the plan expiration date. If an updated district capital facilities plan has not been adopted by the council prior to the existing plan's expiration date due to the district's failure to submit an updated plan, the district shall be ineligible to receive school impact fees until the updated plan has been adopted by the council. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.100 Fee required.

- (1) Each development, as a condition of approval, shall be subject to the school impact fee established pursuant to this chapter. The school impact fee shall be calculated in accordance with the formula established in SCC [30.66C.045](#).
- (2) The fees listed in Table [30.66C.100\(1\)](#) represent one-half of the amount calculated by each school district in its respective capital facilities plan in accordance with the formula identified in SCC [30.66C.045](#).
- (3) The payment of school impact fees will be required prior to issuance of building permits, except as provided in SCC [30.66C.200\(2\)](#). The amount of the fee due shall be based on the fee

schedule in effect at the time of filing a complete application for development. For building permit applications received by the department more than five years after the filing of a complete application for development, the amount of the fee due shall be based on the fee schedule in effect at the time of building permit application.

(4) The department shall maintain and provide to the public upon request a table summarizing the schedule of school impact fees for each school district within the county.

(5) The fees set forth in Table [30.66C.100\(1\)](#) apply to developments that vest to county development regulations from January 1, 2021, to December 31, 2022.

(6) Building permits submitted after January 1, 1999, for which prior plat approval has been obtained under chapter [30.66C](#) SCC as codified prior to January 1, 1999, shall be subject to the school impact fees established pursuant to this chapter, as set forth in this section, except as provided in SCC [30.66C.010\(2\)](#).

Table 30.66C.100(1) School Impact Mitigation Fees

SCHOOL DISTRICT	SINGLE FAMILY per dwelling unit	MULTI-FAMILY 1-BEDROOM per dwelling unit	MULTI-FAMILY 2+ BEDROOMS per dwelling unit	DUPLEXES AND TOWNHOMES per dwelling unit

30.66C.110 Impact fee schedule - exemptions.

The council may, on a case-by-case basis, grant exemptions to the application of the fee schedule for low-income housing as defined in SCC [30.91H.220](#) and in accordance with the conditions specified under RCW [82.02.060\(2\)](#). To qualify for the exemption, the developer shall submit a petition to the director for consideration by the council prior to application for building permit. Conditions for such approvals shall meet the requirements of RCW [82.02.060\(2\)](#) and include a requirement for a covenant to assure the project's continued use for low-income housing. The covenant shall be an obligation that runs with the land upon which the housing is located, and shall be recorded against the title of the real property. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 15-005, Mar. 18, 2015, Eff date Apr. 2, 2015).

30.66C.120 Service areas established.

For purposes of calculating and imposing school impact fees, the geographic boundary of each district constitutes a separate service area. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.130 Impact fee limitations.

- (1) School impact fees shall be imposed for district capital facilities that are reasonably related to the development under consideration, shall not exceed a proportionate share of the costs of system improvements that are reasonably related to the development, and shall be used for system improvements that will reasonably benefit the new development.
- (2) School impact fees must be expended or encumbered for a permissible use within the time limits established in chapter [82.02](#) RCW.
- (3) To the extent permitted by law, school impact fees may be collected for capital facilities costs previously incurred to the extent that new growth and development will be served by the previously constructed capital facilities, provided that school impact fees shall not be imposed to make up for any existing system deficiencies.
- (4) A developer required to pay a fee pursuant to RCW [43.21C.060](#) for capital facilities shall not be required to pay a school impact fee pursuant to RCW [82.02.050](#) - [82.02.090](#) and this title for the same capital facilities. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 18-012, Mar. 14, 2018, Eff date Mar. 29, 2018).

30.66C.150 Credit for in-kind contributions/existing lots.

- (1) A developer may request, and the director may grant a credit against school impact fees otherwise due under this chapter for the value of any dedication of land, improvement to, or new construction of any capital facilities identified in the district's capital facilities plan provided by the developer. Such requests must be accompanied by supporting documentation of the estimated value of such in-kind contributions. All requests must be submitted to the department in writing prior to its determination of the impact fee obligation for the

development. Each request for credit will be immediately forwarded to the affected school district for its evaluation.

(2) Where a school district determines that a development is eligible for a credit for a proposed in-kind contribution, it shall provide the department and the developer with a letter setting forth the justification for and dollar amount of the credit, the legal description of any dedicated property, and a description of the development activity to which the credit may be applied. The value of any such credit may not exceed the impact fee obligation of the development.

(3) Where there is agreement between the developer and the school district concerning the value of proposed in-kind contributions, their eligibility for a credit, and the amount of any credit, the director may approve the request for credit and adjust the impact fee obligation accordingly, and require that such contributions be made as a condition of development approval. Where there is disagreement between the developer and the school district regarding the value of in-kind contributions, however, the director may render a decision that can be appealed by either party pursuant to the procedures in SCC [30.66C.300](#) - [30.66C.310](#).

(4) For any development subject to the provisions of this title that is sited on one or more legal lots created prior to May 1, 1991, a credit equal to the applicable impact fee for a single-family dwelling times the number of such pre-existing lots shall apply to the fee obligation of the development.

(5) For subdivisions, PRDs and other large-scale developments where credits for in-kind contributions or pre-existing lots are proposed or required, it may be appropriate or necessary to establish the value of the credit on a per-unit basis as a part of the development approval. Such credit values will then be recorded as part of the subdivision or other instrument of approval and will be used in determining the fee obligation - if any - at the time of building permit application for the development activity. In the event that such credit value is greater than the impact fee in effect at the time of permit application, the fee obligation shall be considered satisfied, and the balance of the credit may be transferable to future developments by the applicant within the same school district by agreement with the school district. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.160 SEPA mitigation and other review.

(1) The county may condition or deny development approval pursuant to the SEPA as necessary or appropriate to mitigate or avoid significant adverse impacts to school services and facilities, to assure that appropriate provisions are made for schools, school grounds, and safe student walking conditions, and to ensure that development is compatible and consistent with each district's services, facilities and capital facilities plan.

(2) Impact fees required by this chapter shall constitute adequate mitigation for impacts on capital facilities identified in the district's capital facilities plan; except that nothing in this chapter prevents issuance of a determination of significance under SEPA and conditioning or denial of the project based on specific adverse environmental impacts identified during project review. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.200 Collection and transfer of fees.

(1) An applicant must pay school system impact fees prior to building permit issuance, except as provided in subsection [\(2\)](#) of this section.

(2) An applicant may request a deferral of the payment of school impact fees. The deferral of school impact fees shall be allowed only for single-family attached and detached residential construction by a property owner having a contractor registration number or other unique identification number. The amount of impact fees that may be deferred under this subsection shall be determined by the fees in effect at the time the applicant applies for a deferral.

(a) For this subsection:

(i) "Applicant" means the property owner which includes an entity that controls, is controlled by, or is under common control with the applicant.

(ii) "Common control" means two or more entities controlled by the same person or entity.

(iii) "Control" means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether through the ownership of voting shares, by contract, or otherwise.

- (b) An applicant wishing to defer the payment of a school impact fee shall:
 - (i) Submit a signed and notarized deferred impact fees application and completed lien form signed by all owners of the property subject to the lien concurrent with the building permit application for the building subject to the impact fees. Multiple deferrals can be included on one application as long as the building permit applications are located within the same development and the applicant pays a separate administrative fee as required below for each single-family dwelling unit whether detached or attached;
 - (ii) Submit a signed and notarized certification that the applicant has requested deferral of impact fees for no more than a total of 20 building permits in the calendar year within unincorporated Snohomish County; and
 - (iii) Pay a non-refundable \$250.00 administration fee for each deferred impact fee application.
- (c) The lien shall:
 - (i) Be in a form approved and provided by the county;
 - (ii) Include the legal description, property tax account number, and address for each lot or unit the lien will encumber and identify the type and amount of the deferred impact fees;
 - (iii) Be binding and subordinate on all successors in title after the recording;
 - (iv) Be junior and subordinate to a first mortgage for the purpose of construction upon the same real property granted to the applicant who applied for the deferral of impact fees, but in no case shall the lien be in less than second place; and
 - (v) Be signed by all owners of the property, with all signatures acknowledged as required for a deed.
- (d) The lien shall be recorded prior to the issuance of the building permit for the building subject to the impact fees.

- (e) Each applicant eligible to defer impact fees shall only be entitled to receive deferrals for no more than a total of 20 building permits in unincorporated Snohomish County during each calendar year.
- (f) The applicant or property owner shall be responsible for the payment of recording fees.
- (g) The deferred impact fees for each single-family dwelling unit whether detached or attached shall be paid in full prior to whichever of the following occurs first:
 - (i) Scheduling final inspection;
 - (ii) Issuance of a certificate of occupancy;
 - (iii) The closing of the first sale of the property occurring after the recording of the lien; or
 - (iv) Eighteen months from the date of building permit issuance.
- (h) If the building for which the deferral of the impact fees is requested will be located within a subdivision or short subdivision, the subdivision or short subdivision shall be recorded prior to recording the lien for impact fees and issuance of the building permit.
- (i) Upon receipt of final payment of all deferred impact fees for a building permit, the county shall execute a release of the deferred impact fee lien. The applicant or property owner is responsible for submitting a lien release application to PDS. The applicant, at their own expense, will be responsible for recording the lien release after all deferred impact fees associated with a lot or unit subject to a lien have been paid.
- (j) Compliance with the requirements of the deferral option shall constitute compliance with subdivision or short subdivision conditions pertaining to the timing of the impact fee payment.
- (k) If deferred impact fees are not paid in accordance with terms authorized by state law and this section, the county may initiate foreclosure proceedings for the unpaid impact fees and all costs associated with the collection of the unpaid impact fees.
- (l) A request to defer school impact fees under this section may be combined in one application with a request to defer park and recreation impact fees under SCC [30.66A.020\(4\)](#) and road system impact fees under SCC [30.66B.340\(5\)](#).

(3) Districts eligible to receive school impact fees collected by the county shall establish an interest-bearing account separate from all other district accounts. The county shall deposit school impact fees in the appropriate district account within 10 days after receipt, and shall provide the receiving district with a notice of deposit.

(4) Each district shall institute a procedure for the disposition of impact fees and providing for annual reporting to the county that demonstrates compliance with the requirements of RCW [82.02.070](#), and other applicable laws. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Amended Ord. 16-060, Aug. 24, 2016, Eff date Sept. 12, 2016).

30.66C.210 Use of funds.

(1) School impact fees may be used by the district only for capital facilities that are reasonably related to the development for which they were assessed and may be expended only in conformance with the district's adopted capital facilities plan.

(2) In the event that bonds or similar debt instruments are issued for the advance provision of capital facilities for which school impact fees may be expended, and where consistent with the provisions of the bond covenants and state law, school impact fees may be used to pay debt service on such bonds or similar debt instruments to the extent that the capital facilities provided are consistent with the requirements of this title.

(3) The responsibility for assuring that school impact fees are used for authorized purposes rests with the district receiving the school impact fees. All interest earned on a school impact fee account must be retained in the account and expended for the purpose or purposes for which the school impact fees were imposed, subject to the provisions of SCC [30.66C.220](#) below.

(4) Each district shall provide the county an annual report showing the source and the amount of school impact fees received by the school district and the capital facilities financed in whole or in part with those school impact fees. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.220 Refunds.

(1) School impact fees not spent or encumbered within the time limits established in chapter [82.02](#) RCW shall be refunded pursuant to RCW [82.02.080\(1\)](#). For purposes of this chapter, "encumbered" means school impact fees identified by the district to be committed as part of the funding for capital facilities for which the publicly funded share has been assured, development approvals have been sought or construction contracts have been let.

(2) When the county seeks to terminate any or all impact fee requirements under this section, all unexpended or unencumbered funds, including interest earned, shall be refunded in accordance with RCW [82.02.080\(2\)](#).

(3) Refunds provided for under this section shall be paid only upon submission of a proper claim pursuant to county claim procedures. Such claims must be submitted within one year of the date the right to claim the refund arises, or the date that notice is given, whichever is later. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Amended Ord. 12-018, May 2, 2012, Eff date May 21, 2012; Amended by Ord. 18-012, Mar. 14, 2018, Eff date Mar. 29, 2018).

30.66C.230 Reimbursement for county administrative costs, legal expenses, and refund payments.

Each participating school district shall enter into an agreement with the county for reimbursement of the actual administrative costs of assessing, collecting and handling fees for the district, any legal expenses and staff time associated with defense of this chapter against district-specific challenges, and payment of any refunds provided under SCC [30.66C.220](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.300 Administrative adjustment of fee amount.

(1) Within 14 days of acceptance by the county of a building permit application, a developer or school district may appeal to the director for an adjustment to the amount of or an elimination of fees imposed under this chapter by submitting a written explanation of the basis for the appeal. The director may adjust the amount of or eliminate the fee, in consideration of studies

and data submitted by the developer and the affected school district, if one of the following circumstances exists:

- (a) The school impact fee assessment was incorrectly calculated;
- (b) Unusual circumstances exist that demonstrate the school impact fee is unfair as applied to the specific development;
- (c) A credit for in-kind contributions by the developer, as provided for under SCC [30.66C.150](#) above, is warranted;
- (d) Any other credit specified in RCW [82.02.060\(1\)\(b\)](#) is warranted; or
- (e) The school impact fee assessment was improper under RCW [82.02.020](#) or RCW [82.02.050](#) et seq.

(2) To avoid any delay pending resolution of the appeal, school impact fees may be paid under written protest in order to obtain development approval. Such written protest must be submitted at or prior to the time fees are paid, and will relate only to the specific fees identified in the protest. Failure to provide such written protest at the time of fee payment shall be deemed a withdrawal of any appeal to the director.

(3) Failure to file a written protest and to seek a timely appeal to the director shall preclude any appeal of the school impact fee pursuant to SCC [30.66C.310](#).

(4) Refunds approved under this section, or following an administrative appeal as provided in SCC [30.66C.310](#), shall be made to the current property owner at the time the refund is authorized, unless the current property owner releases the county and the school district from any obligation to refund the current property owner.

(5) The developer or the school district may appeal the director's decision as provided in SCC [30.66C.310\(1\)](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.310 Appeals of decisions - procedure.

(1) Any person aggrieved by a decision to impose, impose modifications, or waive an impact fee under this chapter may appeal the decision to the hearing examiner. Where there is an

administrative appeal process for the underlying development approval, appeals of an impact fee under this chapter must be combined with the administrative appeal for the underlying development approval. Where there is no administrative appeal for the permit, then appeal of the impact fee shall proceed as a Type 1 appeal pursuant to chapter [30.71](#) SCC.

(2) The impact fee may be modified or refunded if paid under written protest in accordance with SCC [30.66C.300](#), upon a determination based on the application of the criteria contained in SCC [30.66C.300](#). Appeals shall be limited to application of the impact fee provisions to a specific development. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.320 Arbitration of disputes.

With the consent of the developer and the affected district, a dispute regarding imposition or calculation of a school impact fee may be resolved by arbitration. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

The Snohomish County Code is current through legislation passed November 9, 2021.

Review Note for Page No.	School District Sign-Off	Suggested Correction(s)/Potential Issues
Pgs 7, 9		Appendix F requires an inventory of on portables to include information on remaining useful life (as appropriate to educational standards). Do the portables have adequate useful remaining life?
Pg 12 Table 4		Table 4 Total number of teaching stations is incorrect ($25+19+16+19+0=79$ not 70)
Pg 13 Table 5		Appendix F requires the location and description of all district-owned or leased sites and properties. Where are the Administration building and the Bus Barn located? Other districts provide a graphic/map to show the locations of all the schools and buildings or state the physical address. Please provide either graphic or state the physical location of all schools and buildings for the District.
Pg 17 Table 8		Total permanent capacity is incorrect ($610+375+275=1,260$ not 1228)
Pg 17 Table 9		Total permanent capacity is incorrect ($610+375+275=1,260$ not 1228), Total unhoused students is incorrect ($569+179+399=1,147$ not 1,179), Total %age of Unhoused Students above 2021 will also have to be recalculated
Pg 18 Table 10		Existing Capacity for Elementary schools of 686 on table 10 does not match capacity of 610 reported on Tables 8 and 9. Existing Capacity for Middle schools of 480 on table 10 does not match capacity of 375 reported on Tables 8 and 9. Is the difference the use of non-permanent portables?
Pg 23		Why isn't the \$5 million site acquisition included in the impact fee calculation? It is in Table 11, and the box is checked for impact fees.
		Footnote should refer to Table 12, not Table 10
Appendix C		The tax payment credit is rounded. The District Property Tax Levy Rate is 0.5217122469 not 0.52 which leads to a difference in the calculation of impact fees.
Pg 23		Would the proposed impact fee for Multi-family also include Townhomes? The County impact fee table has a separate category for Townhomes. Historically, the County has applied the MF+2 impact fee to the Townhome column :

		Table 30.66C.100(1) School Impact Mitigation Fees

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington Growth Management Act (GMA) outlines thirteen broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. The public school districts serving Snohomish County residents have developed capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This Capital Facilities Plan (CFP) is intended to provide the Lake Stevens School District (District), Snohomish County, the City of Lake Stevens, the City of Marysville and other jurisdictions a description of facilities needed to accommodate projected student enrollment at acceptable levels of service over the next twenty-two years (2044), with a more detailed schedule and financing program for capital improvements over the next six years (2022-2027). This CFP is based in large measure on the 2015 Facilities Master Plan for the Lake Stevens School District.

When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan¹. This part of the plan establishes the criteria for all future updates of the District CFP, which is to occur every two years. This CFP updates the GMA-based Capital Facilities Plan last adopted by the District in 2020.

In accordance with GMA mandates and Chapter 30.66C SCC, this CFP contains the following required elements:

Element	See Page	Table
Future enrollment forecasts for each grade span (elementary, middle, mid-high and high).	5-2	5-2
An inventory of existing capital facilities owned by the District, showing the locations and student capacities of the facilities.	4-2	4-1
A forecast of the future needs for capital facilities and school sites; distinguishing between existing and projected deficiencies.	6-1 6-2	6-1 6-2
The proposed capacities of expanded or new capital facilities.	6-3	6-3

¹ See Appendix F of this CFP

Element	See Page	Table
A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.	6-3	6-3
A calculation of impact fees to be assessed and support data substantiating said fees.	Appendix A	
A report on fees collected through December 2021 and how those funds were used.	6-5	6-4

In developing this CFP, the guidelines of Appendix F of the General Policy Plan² were used as follows:

- Information was obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information is to be consistent with the State Office of Financial Management (OFM) population forecasts and those of Snohomish County.
- Chapter 30.66C SCC requires that student generation rates be independently calculated by each school district. Rates were updated for this CFP by The BlueLine Group (See Appendix C).
- The CFP complies with RCW 36.70A (the Growth Management Act) and, where impact fees are to be assessed, RCW 82.02.
- The calculation methodology for impact fees meets the conditions and test of RCW 82.02. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources if impact fees are not available due to action by the state, county or the cities within their district boundaries.

Adoption of this CFP by reference by the County and cities of Marysville and Lake Stevens constitutes approval of the methodology used herein by those entities.

Overview of the Lake Stevens School District

The Lake Stevens School District is located six miles east of downtown Everett and encompasses most of the City of Lake Stevens as well as portions of unincorporated Snohomish County and a small portion of the City of Marysville. The District is located south of the Marysville School District and north of the Snohomish School District.

The District currently serves a student population of 9,256³ with seven elementary schools, two middle schools, one mid-high school, one high school and one homeschool partnership program (HomeLink).

² See Appendix G of this CFP

³ April 2022 Headcount Report

Elementary schools provide educational programs for students in kindergarten through grade five. Middle schools serve grades six and seven, the mid-high serves grades eight and nine and the high school serves grades ten through twelve. HomeLink provides programs for students from kindergarten through eighth grade. The District employs 616 certificated staff members and 606 classified staff for a total of 1,222.

Significant Issues Related to Facility Planning in the Lake Stevens School District

The most significant issues facing the Lake Stevens School District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Continued housing growth in the District;
- The need to have unhoused students before becoming eligible for state construction funding;
- The implementation of reduced class sizes at the K-3 level at all elementary schools;
- Uneven distribution of growth across the district and an imbalance in growth in the north and south ends of the district, requiring facilities to balance enrollment;
- Increased critical areas regulations, decreasing the amount of developable areas on school sites;
- Discounted school impact fees and changes to how and when these fees are calculated and paid, none of which supports mitigating the true impact of development;
- The need for additional property and lack of suitable sites within Urban Growth Area (UGA) boundaries to accommodate school facilities;
- The elimination of the ability to develop schools outside of UGAs;
- The inability to add temporary capacity with portable classrooms on school sites without costly stormwater and infrastructure improvements;
- Aging school facilities;
- Projected permanent capacity shortfall by 2027 for K-5 of 1,633 students (with no improvements).

These issues are addressed in greater detail in this Capital Facilities Plan.

SECTION 2: DEFINITIONS

Note: Definitions of terms preceded by an asterisk (*) are provided in Chapter 30.9SCC. They are included here, in some cases with further clarification to aid in the understanding of this CFP. Any such clarifications provided herein in no way affect the legal definitions and meanings assigned to them in Chapter 30.9 SCC.

*Appendix F means Appendix F of the Snohomish County Growth Management Act (GMA) Comprehensive Plan, also referred to as the General Policy Plan (GPP).

*Average Assessed Value average assessed value by dwelling unit type for all residential units constructed within the district. These figures are provided by Snohomish County. The current average assessed value for 2022 is \$485,760 for single-family detached residential dwellings; \$169,461 for one-bedroom (*Small*) multi-family units, and \$239,226 for two or more bedroom (*Large*) multi-family units.

*Boeckh Index (See Construction Cost Allocation)

*Board means the Board of Directors of the Lake Stevens School District (“School Board”).

Capital Bond Rate means the annual percentage rate computed against capital (construction) bonds issued by the District. for 2022, a rate of 2.45% is used. (See also “Interest Rate”)

*Capital Facilities means school facilities identified in the District’s capital facilities plan that are “system improvements” as defined by the GMA as opposed to localized “project improvements.”

*Capital Facilities Plan (CFP) means the District’s facilities plan adopted by its school board consisting of those elements required by Chapter 30.66C SCC and meeting the requirements of the GMA and Appendix F of the General Policy Plan. The definition refers to *this* document, which is consistent with the adopted “2015 Facilities Plan for the Lake Stevens School District,” which is a separate document. Construction Cost Allocation (formerly the Boeckh Index) means a factor used by OSPI as a guideline for determining the area cost allowance for new school construction. The Index for the 2022 Capital Facilities Plan is \$246.83, as provided by Snohomish County.

*City means City of Lake Stevens and/or City of Marysville.

*Council means the Snohomish County Council and/or the Lake Stevens or Marysville City Council.

*County means Snohomish County.

*Commerce means the Washington State Department of Commerce.

*Developer means the proponent of a development activity, such as any person or entity that owns or holds purchase options or other development control over property for which development activity is proposed.

*Development means all subdivisions, short subdivisions, conditional use or special use permits, binding site plan approvals, rezones accompanied by an official site plan, or building permits (including building permits for multi-family and duplex residential structures, and all similar uses) and other applications requiring land use permits or approval by Snohomish County, the City of Lake Stevens and/or City of Marysville.

*Development Activity means any residential construction or expansion of a building, structure or use of land or any other change of building, structure or land that creates additional demand and need for school facilities but excluding building permits for attached or detached accessory apartments, and remodeling or renovation permits which do not result in additional dwelling units. Also excluded from this definition is “Housing for Older Persons” as defined by 46 U.S.C. § 3607, when guaranteed by a restrictive covenant, and new single-family detached units constructed on legal lots created prior to May 1, 1991.

*Development Approval means any written authorization from the County and/or City, which authorizes the commencement of a development activity.

*Director means the Director of the Snohomish County Department of Planning and Development Services (PDS), or the Director’s designee.

District means Lake Stevens School District No. 4.

*District Property Tax Levy Rate (Capital Levy) means the District's current capital property tax rate per thousand dollars of assessed value. For this Capital Facilities Plan, the assumed levy rate is .00152.

*Dwelling Unit Type means (1) single-family residences, (2) multi-family one-bedroom apartment or condominium units (“*small unit*”) and (3) multi-family multiple-bedroom apartment or condominium units (“*large unit*”).

*Encumbered means school impact fees identified by the District to be committed as part of the funding for capital facilities for which the publicly funded share has been assured, development approvals have been sought or construction contracts have been let.

*Estimated Facility Construction Cost means the planned costs of new schools or the actual construction costs of schools of the same grade span recently constructed by the District, including on-site and off-site improvement costs. If the District does not have this cost information available, construction costs of school facilities of the same or similar grade span within another District are acceptable.

*FTE (Full Time Equivalent) is a means of measuring student enrollment based on the number of hours per day in attendance at the District’s schools. A student is considered one FTE if they are enrolled for the equivalent of a full schedule each full day.

*GFA (per student) means the Gross Floor Area per student.

*Grade Span means a category into which the District groups its grades of students (e.g., elementary, middle, mid-high and high school).

Growth Management Act (GMA) - means the Growth Management Act (RCW 36.70A).

*Interest Rate means the current interest rate as stated in the Bond Buyer Twenty Bond General Obligation Bond Index. For this Capital Facilities Plan an assumed rate of 2.45% is used, as provided by Snohomish County. (See also “Capital Bond Rate”)

*Land Cost Per Acre means the estimated average land acquisition cost per acre (in current dollars) based on recent site acquisition costs, comparisons of comparable site acquisition costs in other districts, or the average assessed value per acre of properties comparable to school sites located within the District. In 2022 the District estimates land costs to average \$200,000 per acre.

*Multi-Family Dwelling Unit means any residential dwelling unit that is not a single-family unit as defined by Chapter 30.66C. SCC³

*OFM means Washington State Office of Financial Management.

*OSPI means Washington State Office of the Superintendent of Public Instruction.

*Permanent Facilities means school facilities of the District with a fixed foundation.

*R.C.W. means the Revised Code of Washington (a state law).

*Relocatable Facilities (also referred to as portables) means factory-built structures, transportable in one or more sections, which are designed to be used as an education space and are needed:

- to prevent the overbuilding of school facilities,
- to meet the needs of service areas within the District, or
- to cover the gap between the time that families move into new residential developments and the date that construction is completed on permanent school facilities.

*Relocatable Facilities Cost means the total cost, based on actual costs incurred by the District, for purchasing and installing portable classrooms.

*Relocatable Facilities Student Capacity means the rated capacity for a typical portable classroom used for a specified grade span.

*School Impact Fee means a payment of money imposed upon development as a condition of development approval to pay for school facilities needed to serve the new growth and development. The school impact fee does not include a reasonable permit fee, an application fee, the administrative fee for collecting and handling impact fees, or the cost of reviewing independent fee calculations.

*SEPA means the State Environmental Policy Act (RCW 43.21C).

*Single-Family Dwelling Unit means any detached residential dwelling unit designed for occupancy by a single-family or household.

*Standard of Service means the standard adopted by the District which identifies the program year, the class size by grade span and taking into account the requirements of students with special needs, the number of classrooms, the types of facilities the District believes will best serve its student population and other factors as identified in the District's capital facilities plan. The District's standard of service shall not be adjusted for any portion of the classrooms housed in relocatable facilities that are used as transitional facilities or from any specialized facilities housed in relocatable facilities.

*State Match Percentage means the proportion of funds that are provided to the District for specific capital projects from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the maximum percentage of the total project eligible to be paid by the State.

*Student Factor (Student Generation Rate [SGR]) means the number of students of each grade span (elementary, middle, mid-high and high school) that the District determines are typically generated by different dwelling unit types within the District⁴. Each District will use a survey or statistically valid methodology to derive the specific student generation rate, provided that the survey or methodology is approved by the Snohomish County Council as part of the adopted capital facilities plan for each District. (See Appendix C)

*Subdivision means all small and large lot subdivisions as defined in Section 30.41 of the Snohomish County Code.

*Teaching Station means a facility space (classroom) specifically dedicated to implementing the District's educational program and capable of accommodating at any one time, at least a full class of up to 30 students. In addition to traditional classrooms, these spaces can include computer labs, auditoriums, gymnasiums, music rooms and other special education and resource rooms.

*Unhoused Students means District enrolled students who are housed in portable or temporary classroom space, or in permanent classrooms in which the maximum class size is exceeded.

*WAC means the Washington Administrative Code.

⁴ For purposes of calculating Student Generation Rates, assisted living or senior citizen housing are not included.

SECTION 3: DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables). Educational Program Standards are the same as the minimum level of service as required by Appendix F of the Growth Management Comprehensive Plan.

In addition, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional or special programs such as special education, English as a second language, remediation, alcohol and drug education, preschool and daycare programs, computer labs, music programs, etc. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities.

Examples of special programs offered by the Lake Stevens School District at specific school sites include:

- Behavioral Program
- Bilingual Program
- Career and Technical Education
- Community Education
- Conflict Resolution
- Contract-Based Learning
- Credit Retrieval
- Drug Resistance Education
- Early Learning Center, which includes ECEAP and developmentally delayed preschool
- Highly Capable
- Home School Partnership (HomeLink)
- Language Assistance Program (LAP)
- Life Skills Self-Contained Program
- Multi-Age Instruction
- Multi-tiered Systems of Support
- Occupational and Physical Therapy
- Running Start
- Speech and Language Pathologists
- Structured Learning Center Self-Contained Program
- Summer School
- Title 1
- Title 2

Variations in student capacity between schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space, which can reduce the regular classroom capacity of some of the buildings housing these programs. Some students,

for example, leave their regular classroom for a short period of time to receive instruction in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program requirements will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, state funding levels and use of new technology, as well as other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

In addition, districts are wrestling with the outcomes from the McCleary decision and additional funding and requirements from OSPI and the state Legislature. Many of these outcomes, like full-day kindergarten and reduced class sizes at the elementary level and new graduation requirements at the high school level can have significant impacts to the use of facilities. These will need to be incorporated into the District's facility capacities and uses.

The District's minimum educational program requirements, which directly affect school capacity, are outlined below for the elementary, middle, mid-high and high school grade levels.

Educational Program Standards for Elementary Grades

- Average class size for kindergarten should not exceed **19** students.
- Average class size for grades 1-3 should not exceed **20** students.
- Average class size for grades 4-5 should not exceed **25** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is **12** students.
- All students will be provided music instruction in a separate classroom.
- Students may have a scheduled time in a computer lab.
- Optimum design capacity for new elementary schools is 550 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Educational Program Standards for Middle, Mid-High and High Schools

- Class size for secondary grade (6-12) regular classrooms should not exceed **27** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is 12 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a workspace during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 83% at the high school, mid-high and middle school levels.
- Some Special Education services for students will be provided in a self-contained classroom.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Resource Rooms (i.e., computer labs, study rooms).
 - Special Education Classrooms.
- Program Specific Classrooms:

- Music
- Physical Education
- Drama
- Family and Consumer Sciences
- Art
- Career and Technical Education

Optimum design capacity for new middle schools is 750 students. Optimum design capacity for new high schools is 1,500 students. *Actual* capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Program Standards

The Lake Stevens School District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system.

The Lake Stevens School District has set minimum educational program standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. If there are 25 or fewer students in a majority of K-5 classrooms, the standards have been met; if there are 27 or fewer students in a majority of 6-12 classrooms, the minimum standards have been met. The Lake Stevens School District meets these standards at all grade levels.

Table 3-1 – Minimum Educational Program Standards (MEPS) Met

Grade level	Classrooms above MEPS	Total Classrooms	% Meeting MEPS
Total Elementary	21	194	89%
Total Secondary	30	163	82%
District Total	51	357	86%

It should be noted that the minimum educational program standard is just that, a minimum, and not the desired or accepted operating standard. Also, portables are used to accommodate students within District standards, but are not considered a permanent solution. (See Chapter 4).

SECTION 4: CAPITAL FACILITIES INVENTORY

Capital Facilities

Under GMA, public entities are required to inventory capital facilities used to serve the existing populations. Capital facilities are defined as any structure, improvement, piece of equipment, or other major asset, including land that has a useful life of at least ten years. The purpose of the facilities inventory is to establish a baseline for determining what facilities will be required to accommodate future demand (student enrollment) at acceptable or established levels of service. This section provides an inventory of capital facilities owned and operated by the Lake Stevens School District including schools, portables, developed school sites, undeveloped land and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards (see Section 3). A map showing locations of District school facilities is provided as Figure 1.

Schools

The Lake Stevens School District includes: seven elementary schools grades K-5, two middle schools grades 6-7, one mid-high school grades 8-9, one high school grades 10-12, and an alternative K-8 home school partnership program (HomeLink).

The Office of the Superintendent of Public Instruction (OSPI) calculates school capacity by dividing gross square footage of a building by a standard square footage per student. This method is used by the State as a simple and uniform approach for determining school capacity for purposes of allocating available State Match Funds to school districts for school construction. However, this method is not considered an accurate reflection of the capacity required to accommodate the adopted educational program of each individual district. For this reason, school capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted education program. These capacity calculations were used to establish the District's baseline capacity and determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 4-1.

Table 4-1 – School Capacity Inventory

School Name	Site Size (acres)	Bldg. Area (Sq. Ft.)	Teaching Stations - Regular	Teaching Stations - SPED	Perm. Student Capacity*	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility
Elementary Schools								
Glenwood Elementary	9.0	42,673	22	2	473	598	1992	Yes
Highland Elementary	8.7	49,727	19	4	433	633	1999	Yes
Hillcrest Elementary	15.0	49,735	23		503	753	2008	Yes
Mt. Pilchuck Elementary	22.0	49,833	18	3	407	557	2008	Yes
Skyline Elementary	15.0	42,673	22	2	484	669	1992	Yes
Stevens Creek Elementary	20.0	78,880	26	2	560	560	2018	Yes
Sunnycrest Elementary	15.0	46,970	25		514	614	2009	Yes
Elementary Total	104.7	360,491	155	13	3,374	4,384		
Middle Schools								
Lake Stevens Middle School	25.0	86,374	28	6	647	839	1996	Yes
North Lake Middle School	15.0	90,323	29	5	707	909	2001	Yes
Middle School Total	40.0	176,697	57	11	1,354	1,748		
Mid-High								
Cavelero Mid-High School	37.0	224,694	60	7	1,382	1,382	2007	Yes
Mid-High Total	37.0	224,694	60	7	1,382	1,382		
High Schools								
Lake Stevens High School	38.0	207,195	91	6	2,104	2,104	2021	Yes
High School Total	38.0	207,195	91	6	2,104	2,104		
District Totals	219.7	969,077	363	37	8,214	9,618		

*Note: Student Capacity is exclusive of portables and includes adjustments for special programs.

Leased Facilities

The District does not lease any permanent classrooms.

Relocatable Classrooms (Portables)

Portables are used as interim classroom space to house students until funding can be secured to construct permanent classroom facilities. Portables are not viewed by the District as a solution for housing students on a permanent basis. The Lake Stevens School District currently uses 86 portable classrooms at various school sites throughout the District to provide interim capacity for K-12 students. This compares with 75 portables used in 2020. A typical portable classroom can provide capacity for a full-size class of students. Current use of portables throughout the District is summarized on Table 4-2.

Table 4-2 – Portables

School Name	Portable Classrooms	Capacity in Portables	Portable Area (ft²)
<u>ELEMENTARY SCHOOLS</u>

High School Total	0	0	0
District K-12 Total	86	1,404	77,056

The District will continue to purchase or move existing portables, as needed, to cover the gap between the time that families move into new residential developments and the time the District is able to complete construction on permanent school facilities.

Support Facilities

In addition to schools, the Lake Stevens School District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided in Table 4-3.

Table 4-3 – Support Facilities

Facility	Site Acres	Building Area (sq.ft.)
Education Service Center	1.4	13,700
Grounds	1.0	3,000
Maintenance	1.0	6,391
Transportation	6.0	17,550
Support Facility Total	9.4	40,641

Land Inventory

The Lake Stevens School District owns five undeveloped sites described below:

Ten acres located in the northeast area of the District (Lochsloy area), west of Highway 92. This site will eventually be used for an elementary school (beyond the year 2027). It is presently used as an auxiliary sports field.

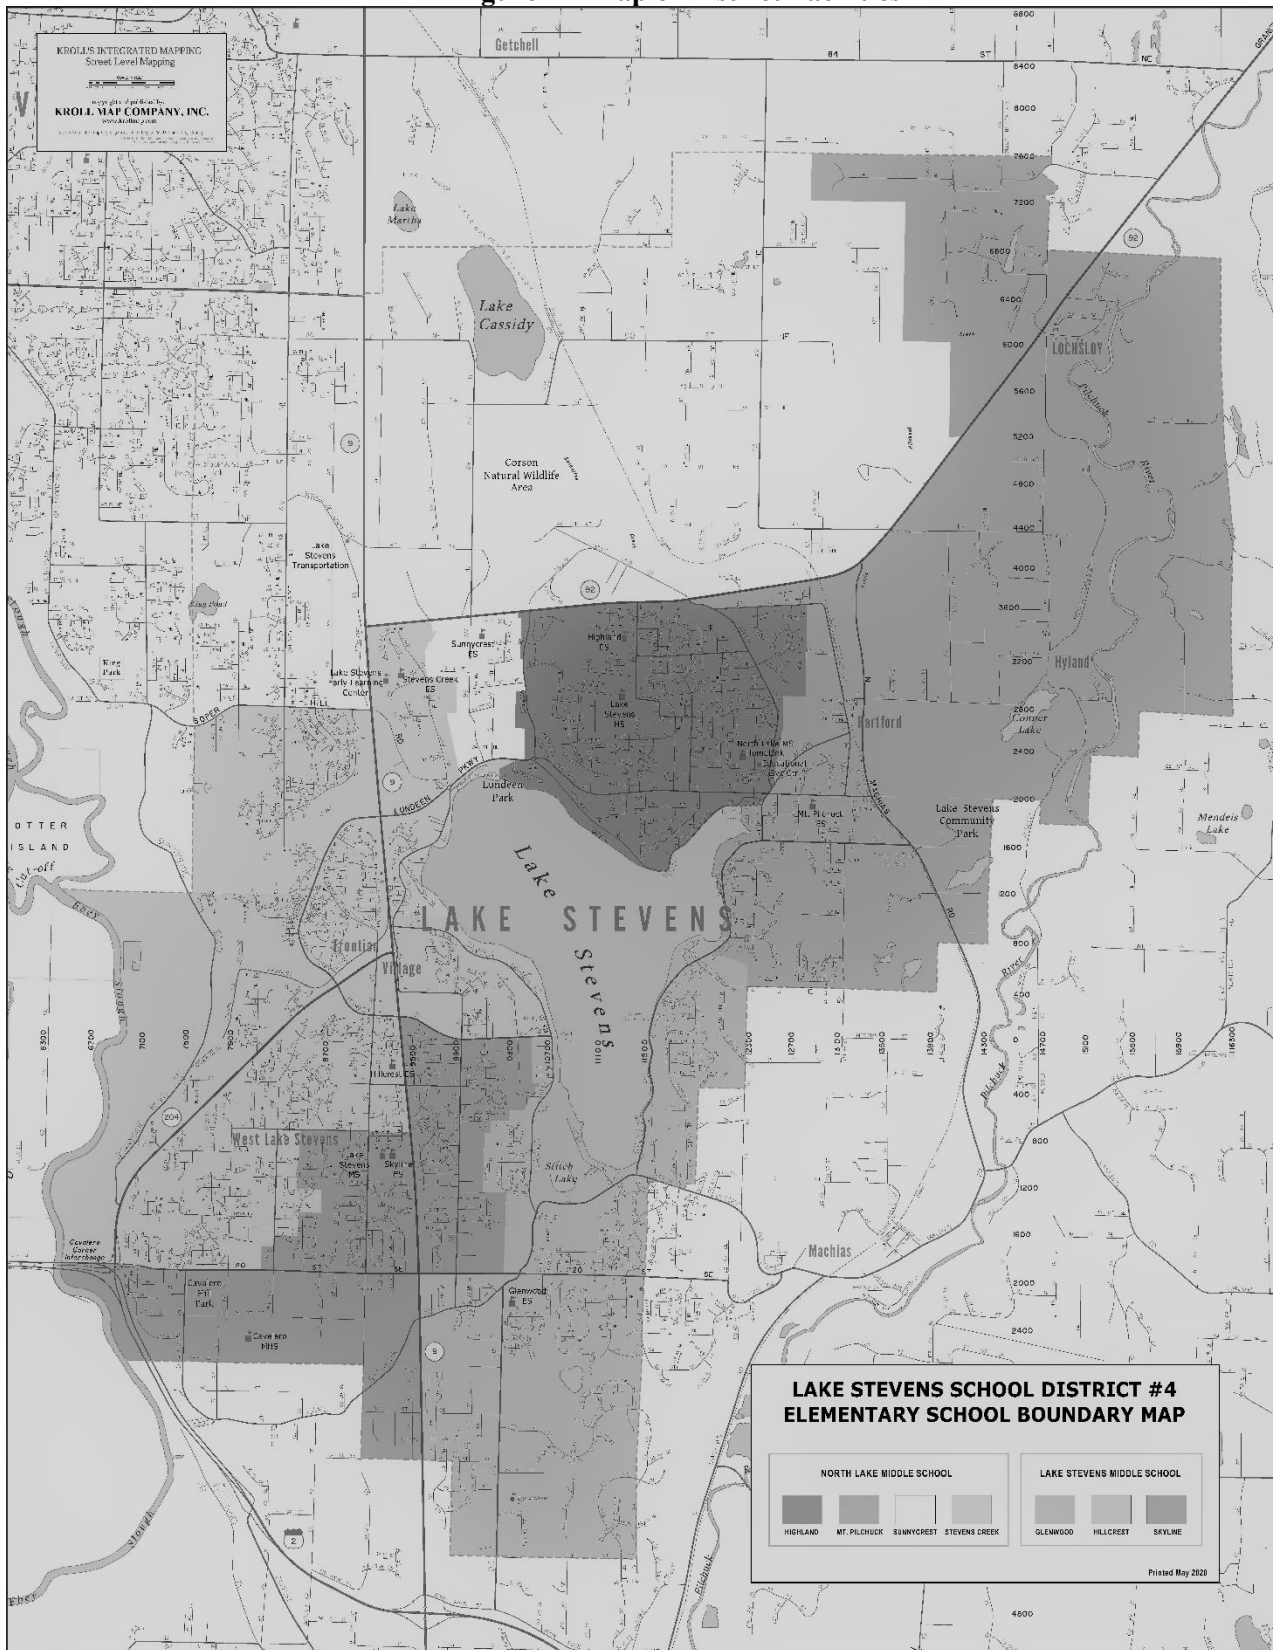

An approximately 35-acre site northeast of the intersection of Highway 9 and Soper Hill Road bordered by Lake Drive on the east. This is the site of the district's newest elementary school and early learning center. The remainder of the site is planned for a future middle school.

A parcel of approximately 23 acres located at 20th Street SE and 83rd Street. This property was donated to the School District for an educational facility. The property is encumbered by wetlands and easements, leaving less than 10 available acres. It is planned to be a future elementary school.

A 20 ft. x 200 ft. parcel located on 20th Street SE has been declared surplus by the Lake Stevens School Board and will be used in exchange for dedicated right-of-way for Cavelero Mid-High.

A 2.42-acre site (Jubb Field) located in an area north of Highway #92 is used as a small softball field. It is not of sufficient size to support a school.

Figure 1 – Map of District Facilities

SECTION 5: STUDENT ENROLLMENT TRENDS AND PROJECTIONS

Historic Trends and Projections

Student enrollment in the Lake Stevens School District remained relatively constant between 1973 and 1985 (15%) and then grew significantly from 1985 through 2005 (approximately 120%). Between 2012 and 2021, student enrollment increased by 1,338 students, over 16%. Overall, there was a 2.5% increase countywide during this period, with seven districts losing enrollment. The District has been and is projected to continue to be one of the fastest growing districts in Snohomish County based on the OFM-based population forecast. Population is estimated by the County to rise from 50,461 in 2020 to almost 67,294 in Year 2044, an increase of 33%.

Figure 2 – Lake Stevens School District Enrollment 2012-2021

Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, economic conditions and demographic trends in the area affect the estimates. Monitoring population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projections. Table 5-1 shows enrollment growth from 2012 to 2021 according to OSPI and District records.

Table 5-1 - Enrollment 2011-2019

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Elementary	3,658	3,783	3,917	3,971	4,030	4,083	4,207	4,362	3,998	4,354
Middle	1,307	1,328	1,261	1,314	1,398	1,405	1,414	1,556	1,468	1,426
Mid-High	1,313	1,283	1,318	1,331	1,312	1,344	1,426	1,448	1,476	1,524
High School	1,709	1,732	1,757	1,776	1,871	1,814	1,828	1,834	1,912	2,021
Total	7,987	8,126	8,253	8,392	8,611	8,646	8,875	9,200	8,854	9,325

The District has used either a Ratio Method for its projections or accepted the projections from the State Office of the Superintendent of Public Instruction (OSPI). The Ratio Method (See Appendix C) estimates future enrollments as a percentage of total population, which is tracked for past years, with assumptions being made for what this percentage will be in future years. Between 2010-2021, the average percentage was 18.6%. For future planning, a level rate of 18.5% was used through 2027 and for Year 2044. These assumptions recognize a trend toward lower household sizes offset by significant growth anticipated in the Lake Stevens area. OSPI methodology uses a modified cohort survival method which is explained in Appendix B.

Ratio Method estimates are found in Table 5-2. These have been adopted as part of this Capital Facilities Plan.

Table 5-2 - Projected Enrollment 2022-2027

	2021*	2022	2023	2024	2025	2026	2027
Elementary School	4,354	4,536	4,648	4,737	4,884	5,031	5,007
Middle School	1,426	1,464	1,530	1,563	1,554	1,520	1,681
Mid-High School	1,524	1,506	1,470	1,480	1,543	1,574	1,553
High School	2,021	2,106	2,101	2,107	2,044	2,038	2,060
Total	9,325	9,612	9,750	9,888	10,026	10,164	10,302

*October 2021 Headcount

Figure 3 - Projected Lake Stevens School District Enrollment 2022-2027

In summary, the Ratio Method estimates that headcount enrollment will total 10,302 students in 2027. This represents a 10.5% increase over 2021. The District accepts the Ratio Method estimate for its 2022 CFP planning.

2044 Enrollment Projection

The District projects a 2044 student enrollment of 12,449 based on the Ratio method. (OSPI does not forecast enrollments beyond 2027). The forecast is based on the County's OFM-based population forecast of 67,294 in the District. Although student enrollment projections beyond 2027 are highly speculative, they are useful for developing long-range comprehensive facilities plans. These long-range

enrollment projections may also be used in determining future site acquisition needs.

Table 5-3 - Projected 2044 Enrollment

Grade Span	Projected 2044 FTE Student Enrollment
Elementary (K-5)	5,824
Middle (6-7)	2,017
Mid-High (8-9)	1,984
High (10-12)	2,625
District Total (K-12)	12,449

The 2044 estimate represents a 33.5% increase over 2021 enrollment levels. The total population in the Lake Stevens School District is forecasted to rise by 31%. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle school, mid-high school and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle, mid-high and high school levels.

Again, the 2044 estimates are highly speculative and are used only for general planning purposes. Analysis of future facility and capacity needs is provided in Section 6 of this Capital Facilities Plan.

SECTION 6: CAPITAL FACILITIES PLAN

Existing Deficiencies

Current enrollment at each grade level is identified in Table 5-2. The District currently (2021) has 980 unhoused students at the elementary level, 72 unhoused students at the middle school level and 142 unhoused students at the mid-high level. It has excess capacity high school (83) level.

Facility Needs (2022-2027)

Projected available student capacity was derived by subtracting projected student enrollment from 2021 permanent school capacity (excluding portables) for each of the six years in the forecast period (2022-2027). The District's enrollment projections in Table 5-2 have been applied to the existing capacity (Table 4-1). If no capacity improvements were to be made by the year 2027 the District would be over capacity at the elementary level by 1,633 students, 327 students at the middle school level and 171 students at the mid-high school level.

These projected future capacity needs are depicted on Table 6-1. This table compares actual future space needs with the portion of those needs that are "growth related." RCW 82.02 and Chapter 30.66C SCC mandate that new developments cannot be assessed impact fees to correct existing deficiencies. Thus, any capacity deficiencies existing in the District in 2021 must be deducted from the total projected deficiencies before impact fees are assessed.

Table 6-1 - Projected Additional Capacity Needs 2022 – 2027

Grade Span	2021*	2022	2023	2024	2025	2026	2027

* October 2021 enrollment							

Figures assume no capital improvements.

Forecast of Future Facility Needs through 2044

Additional elementary, middle, mid-high and high school classroom space will need to be constructed between 2022 and 2044 to meet the projected student population increase. The District will have to purchase additional school sites to facilitate growth during this time frame. By the end of the six-year forecast period (2027), additional permanent student capacity will be needed as follows:

Table 6-2 –Additional Capacity Need 2027 & 2044

Grade Level	2022 Capacity	2027 Enrollment	2027 Additional Capacity Needed	2044 Enrollment	2044 Additional Capacity Needed
Elementary	3,374	5,007	1,633	5,824	2,450
Middle School	1,354	1,681	327	2,017	663
Mid-High	1,382	1,553	171	1,984	602
High School	2,104	2,060	0	2,625	521
Total	8,214	10,302	2,132	12,449	4,235

Planned Improvements (2022 - 2027)

The following is a brief outline of those projects likely needed to accommodate unhoused students in the Lake Stevens School District through the Year 2027 based on OSPI enrollment projections.

Elementary Schools: Based upon current enrollment estimates, elementary student population will increase to the level of requiring three new elementary schools. The CFP reflects acquisition of land for two schools and the construction of three elementary schools in 2026 and 2027, although the exact timing is unknown at this time.

Middle Schools: Based upon current enrollment estimates, middle school student population will increase to the level of requiring a new middle school. The CFP reflects the construction of a new middle school in 2027, although the exact timing is unknown at this time.

Interim Classroom Facilities (Portables): Additional portables will be purchased in future years, as needed. However, it remains a District goal to house all students in permanent facilities.

Site Acquisition and Improvements: Two additional elementary school sites will be needed in areas where student growth is taking place. The 10-acre Lochsloy property is in the far corner of the district, not in an area of growth and will not meet this need. Affordable land suitable for school facilities will be difficult to acquire.

Support Facilities

The District has added a satellite pupil transportation lot at Cavelero Mid High to support the growing needs for the district. This is a temporary measure until a site can be acquired and a new, larger pupil transportation center can be built.

Capital Facilities Six-Year Finance Plan

The Six Year Finance Plan shown on Table 6-3 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include bond issue(s), state match funds, school mitigation and impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since the latter are generally not appropriate for impact fee funding. The financing plan and impact fee calculation formula also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.

Table 6-3 – 2022-2027 Capital Facilities Plan

Estimated Project Cost by Year (In \$Millions)	2022	2023	2024	2025	2026	2027	Total	Local Cost*	State Match

*Local Costs include funds currently available, impact fees to be collected and bonds or levies not yet approved.

General Obligation Bonds: Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond. Bonds are then retired through collection of property taxes. A capital improvements bond for \$116,000,000 was approved by the electorate in February 2016. Funds have been used to construct a new elementary school and modernize Lake Stevens High School, as well as fund other non-growth-related projects.

The total costs of the growth-related projects outlined in Table 6-3 represent recent and current bids per information obtained through OSPI, the District's architect and neighboring school districts that have recently or are planning to construct classroom space. An escalation factor of 6% per year has been applied out to 2027.

State Match Funds: State Match Funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominately from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the State Board of Education can establish a moratorium on certain projects.

School districts may qualify for State matching funds for a specific capital project. To qualify, a project must first meet State-established criteria of need. This is determined by a formula that specifies the amount of square footage the State will help finance to house the enrollment projected for the district. If a project qualifies, it can become part of a State prioritization system. This system prioritizes allocation of available funding resources to school districts based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percent of the total project cost to be paid by the State for eligible projects.

State Match Funds can only be applied to major school construction projects. Site acquisition and minor improvements are not eligible to receive matching funds from the State. Because state matching funds are dispersed after a district has paid its local share of the project, matching funds from the State may not be received by a school district until after a school has been constructed. In such cases, the District must "front fund" a project. That is, the District must finance the project with local funds. When the State share is finally disbursed (without accounting for escalation) the future District project is partially reimbursed.

Because of the method of computing state match, the District has historically received approximately 39% of the actual cost of school construction in state matching funds. For its 2022 CFP, the District assumes a 40% match.

School Impact Fees: Development impact fees have been adopted by several jurisdictions as a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time building permits or certificates of occupancy are issued.

Impact fees have been calculated utilizing the formula in Chapter 30.66C SCC. The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase, install or relocate temporary facilities (portables). Credits have also

been applied in the formula to account for state match funds to be reimbursed to the District and projected future property taxes to be paid by the owner of a dwelling unit. The costs of projects that do not add capacity or which address existing deficiencies have been eliminated from the variables used in the calculations. Only capacity improvements are eligible for impact fees.

Shown on Table 6-4, since 2012 the Lake Stevens School District has collected and expended the following impact fees:

Table 6-4 – Impact Fee Revenue and Expenditures

	Revenue	Expenditure
2020	\$1,604,948	\$ 119,820
2019	\$4,483,964	\$4,177,428
2018	\$1,760,609	\$4,076,918
2016	\$1,595,840	\$1,872,014
2014	\$ 698,188	\$1,389,784
2013	\$1,005,470	\$ 22,304
2012	\$1,526,561	\$-
Total	\$12,675,580	\$11,658,267

The law allows ten years for collected dollars to be spent.

By ordinance, new developments cannot be assessed impact fees to correct existing deficiencies. Thus, existing capacity deficiencies must be deducted from the total projected deficiencies in the calculation of impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since non-capacity improvements are not eligible for impact fee funding. The financing plan and impact fee calculation also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs (Table 6-1). From this process, the District can develop a plan that can be translated into a bond issue package for submittal to District voters, if deemed appropriate.

Table 6-5 presents an estimate of the capacity impacts of the proposed capital construction projects.

Table 6-5 – Projected Growth-Related Capacity (Deficit) After Programmed Improvements

2021	Elementary	Middle	Mid-High	High School

Impact Fee Calculation Criteria**1. Site Acquisition Cost Element**

Site Size: The site size given the optimum acreage for each school type based on studies of existing school

sites OSPI standards. Generally, districts will require 11-15 acres for an elementary school; 25-30 acres for a middle school or junior high school; and 40 acres or more for a high school. Actual school sites may vary in size depending on the size of parcels available for sale and other site development constraints, such as wetlands. It also varies based on the need for athletic fields adjacent to the school along with other specific planning factors.

This space for site size on the Variable Table contains a number only when the District plans to acquire additional land during the six-year planning period, 2022 - 2027. As noted previously, the District will need to acquire two additional elementary school sites between 2022 and 2027.

Average Land Cost Per Acre: The cost per acre is based on estimates of land costs within the District, based either on recent land purchases or by its knowledge of prevailing costs in the particular real estate market. Prices per acre will vary throughout the County and will be heavily influenced by the urban vs. rural setting of the specific district and the location of the planned school site. The Lake Stevens School District estimates its vacant land costs to be \$200,000 per acre. Until a site is located for acquisition, the actual purchase price is unknown. Developed sites, which sometimes must be acquired adjacent to existing school sites, can cost well over the \$200,000 per acre figure.

Facility Design Capacity (Student FTE): Facility design capacities reflect the District's optimum number of students each school type is designed to accommodate. These figures are based on actual design studies of optimum floor area for new school facilities. The Lake Stevens School District designs new elementary schools to accommodate 600 students, new middle schools 750 students and new high schools 1,500 students.

Student Factor: The student factor (or student generation rate) is the average number of students generated by each housing type – in this case: single-family detached dwellings and multiple-family dwellings. Multiple-family dwellings, which may be rental or owner-occupied units within structures containing two or more dwelling units, were broken out into one-bedroom and two-plus bedroom units. Pursuant to a requirement of Chapter 30.66C SCC, each school district was required to conduct student generation studies within their jurisdictions. A description of this methodology is contained in Appendix C. The Blueline Group performed the analysis. The student generation rates for the Lake Stevens School District are shown on Table 6-6.

Table 6-6 – Student Generation Rates

2022

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.348	0.091	0.090	0.101	0.630
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.146	0.031	0.000	0.023	0.200

2020

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.362	0.116	0.094	0.125	0.697
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.250	0.073	0.094	0.073	0.490

The table also shows the Student Generation rates from the 2020 CFP. For the last three cycles, the

studies showed no records of one-bedroom apartment construction. There has been a gradual decline in student generation rates at all levels and for all housing types.

2. School Construction Cost Variables

Additional Building Capacity: These figures are the actual capacity additions to the Lake Stevens School District that will occur because of improvements listed on Table 6-3 (Capital Facilities Plan).

Current Facility Square Footage: These numbers are taken from Tables 4-1 and 4-2. They are used in combination with the “Existing Portables Square Footage” to apportion the impact fee amounts between permanent and temporary capacity figures in accordance with Chapter 30.66C. SCC.

Estimated Facility Construction Cost: The estimated facility construction cost is based on planned costs or on actual costs of recently constructed schools. The facility cost is the total cost for construction projects as defined on Table 6-3, including only capacity related improvements and adjusted to the “growth related” factor. Projects or portions of projects that address existing deficiencies (which are those students who are un-housed as of October 2021) are not included in the calculation of facility cost for impact fee calculation.

Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extensions, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

3. Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of portables to help relieve capacity deficiencies on a temporary basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent versus temporary space allocations by the district.

Existing Units: This is the total number of existing portables in use by the district as reported on Table 4-2.

New Facilities Required Through 2027: This is the estimated number of portables to be acquired.

Cost Per Unit: This is the average cost to purchase and set up a portable. It includes site preparation but does not include moveable furnishings in the unit.

Relocatable Facilities Cost: This is simply the total number of needed units multiplied by the cost per unit. The number is then adjusted to the “growth-related” factor.

For districts, such as Lake Stevens, which do not credit any portable capacity to the permanent capacity total (see Table 4-1), this number is not directly applicable to the fee calculation and is for information only. The impact fee allows a general fee calculation for portables; however, the amount is adjusted to the proportion of total square footage in portables to the total square footage of permanent and portable space in the district.

4. Fee Credit Variables

Construction Cost Allocation: This number is used by OSPI as a guideline for determining the area cost allowance for new school construction. The index is an average of a seven-city building cost index for commercial and factory buildings in Washington State and is adjusted every year for inflation. The current allocation is \$246.83 (July 2022) up from \$238.22 in 2020.

State Match Percentage: The State match percentage is the proportion of funds that are provided to the school districts, for specific capital projects, from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates the District's assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percentage of the total project to be paid by the State. The District will continue to use a state match percentage of 40%.

5. Tax Credit Variables

Under Chapter 30.66C SCC, a credit is granted to new development to account for taxes that will be paid to the school district over the next ten years. The credit is calculated using a "present value" formula.

Interest Rate (20-year GO Bond): This is the interest rate of return on a 20-year General Obligation Bond and is derived from the bond buyer index. The current assumed interest rate is 2.44%.

Levy Rate (in mils): The Property Tax Levy Rate (for bonds) is determined by dividing the District's average capital property tax rate by one thousand. The current levy rate for the Lake Stevens School District is 0.00152.

Average Assessed Value: This figure is based on the District's average assessed value for each type of dwelling unit (single-family and multiple family). The averaged assessed values are based on estimates made by the County's Planning and Development Services Department utilizing information from the Assessor's files. The current average assessed value for 2022 for single-family detached residential dwellings is \$485,760, up from \$423,231 in 2020 and \$349,255 in 2018); \$169,461 for one-bedroom multi-family unit (\$125,314 in 2020; \$91,988 in 2018), and \$239,226 for two or more bedroom multi-family units (2020: \$178,051; 2018: \$136,499).

6. Adjustments

Growth Related Capacity Percentage: Only the portions of projects addressing new unhoused need are included in the impact fee calculations. The percentage is determined by the number of new unhoused students divided by the number of students for which the project would provide additional capacity.

Fee Discount: In accordance with Chapter 30.66C SCC, all fees calculated using the above factors are to be reduced by 50%.

Table 6-7 - Impact Fee Variables

Criteria	Elementary	Middle	Mid-High	High
Growth-Related Capacity Deficiencies	653	255	29	0
Discount (Snohomish County, Lake Stevens and Marysville)	50%	50%	50%	50%

Appendix B

OSPI Enrollment Forecasting Methodology

OSPI PROJECTION OF ENROLLMENT DATA

Cohort-Survival or Grade-Succession Technique

Development of a long-range school-building program requires a careful forecast of school enrollment indicating the projected number of children who will attend school each year. The following procedures are suggested for determining enrollment projections:

1. Enter in the lower left corner of the rectangle for each year the number of pupils actually enrolled in each grade on October 1, as reported on the October Report of School District Enrollment, Form M-70, column A. (For years prior to October 1, 1965, enter pupils actually enrolled as reported in the county superintendent's annual report, Form A-1.)
2. In order to arrive at enrollment projections for kindergarten and/or grade one pupils, determine the percent that the number of such pupils each year was of the number shown for the immediately preceding year. Compute an average of the percentages, enter it in the column headed "Ave. % of Survival", and apply such average percentage in projecting kindergarten and/or grade one enrollment for the next six years.
3. For grade two and above determine the percent of survival of the enrollment in each grade for each year to the enrollment in the next lower grade during the preceding year and place this percentage in the upper right corner of the rectangle. (For example, if there were 75 pupils in actual enrollment in grade one on October 1, 1963, and 80 pupils were in actual enrollment in grade two on October 1, 1964, the percent of survival would be $80/75$, or 106.7%. If the actual enrollment on October 1, 1965, in grade three had further increased to 100 pupils, the percent of survival to grade three would be $100/80$ or 125 %.). Compute an average of survival percentages for each year for each grade and enter it in the column, "Ave. % of Survival".
4. In order to determine six-year enrollment projections for grade two and above, multiply the enrollment in the next lower grade during the preceding year by 7 the average percent of survival. For example, if, on October 1 of the last year of record, there were 100 students in grade one and the average percent of survival to grade two was 105, then 105% of 100 would result in a projection of 105 students in grade two on October 1 of the succeeding year.
5. If, after calculating the "Projected Enrollment", there are known factors which will further influence the projections, a statement should be prepared showing the nature of those factors, involved and their anticipated effect upon any portion of the calculated projection.

*Kindergarten students are projected based on a regression line.

Appendix C
OFM Ratio Method – 2044 Enrollment Estimate

Enrollment Forecasts OSPI and OFM Ratio Methods

The Growth Management Act requires that capital facilities plans for schools consider enrollment forecasts that are related to official population forecasts for the district. The OFM ratio method computes past enrollment as a percentage of past population and then estimates how those percentage trends will continue.

Snohomish County prepares the population estimates by distributing official estimates from the Washington Office of Financial Management (OFM) to the school district level. SCC 30.66C requires that these official OFM/County population forecasts be used in the capital facilities plans. Each district is responsible for estimating the assumed percentage of population that, in turn will translate into enrollments.

The District's assumed percentage trends are applied to these County population forecasts. This is known as the Ratio Method. The District then decides to use either it or the six-year forecast (2022-2027) prepared by the State Office of the Superintendent of Public Instructions (OSPI) for use in the facilities plan. Whichever is used for the 2022-2027 planning period, OSPI does not forecast enrollments for Year 2044, so the Ratio Method is used for that purpose, regardless.

Year	Population	Enrollment	Ratio
2010	39,977	7,913	19.79%
2011	41,025	7,985	19.46%
2012	42,074	7,987	18.98%
2013	43,122	8,126	18.84%
2014	44,171	8,253	18.68%
2015	45,219	8,392	18.56%
2016	46,267	8,611	18.61%
2017	47,316	8,646	18.27%
2018	48,364	8,875	18.35%
2019	49,413	9,200	18.62%
2020	50,461	8,854	17.55%
2021	51,208	9,325	18.21%
2022	51,954	9,612	18.50%
2023	52,701	9,750	18.50%
2024	53,447	9,888	18.50%
2025	54,194	10,026	18.50%
2026	54,940	10,164	18.50%
2027	55,687	10,302	18.50%
2044	67,294	12,449	18.50%

The table above shows actual enrollments and population estimates from 2010-2021, and their resulting ratio (the 2010 and 2020 population totals are official census figures).

Until 2015 the trend was a declining ratio of students to population. The ratio leveled off in years 2016 through 2019. In 2020, school closures and online learning caused enrollment to drop. Then enrollment rebounded in 2021 and returned to pre-pandemic levels. The district projects that the ratio will level off for the projection period and average around 18.5%.

2044 Enrollment Estimate

The District's 2022 CFP ratio of 18.50% is used for the 2044 enrollment estimate. Using that number against the County's 2044 population estimate of 67,294 produces a projected enrollment number of 12,449 students in 2044.

REVIEW CRITERIA FOR SCHOOL DISTRICT CAPITAL FACILITY PLANS

Required Plan Contents

1. Future Enrollment Forecasts by Grade Span, including:
 - a 6-year forecast (or more) to support the financing program;
 - a description of the forecasting methodology and justification for its consistency with OFM population forecasts used in the county's comprehensive plan.
2. Inventory of Existing Facilities, including:
 - the location and capacity of existing schools;
 - a description of educational standards and a clearly defined minimum level of service such as classroom size, school size, use of portables, etc.;
 - the location and description of all district-owned or leased sites (if any) and properties;
 - a description of support facilities, such as administrative centers, transportation and maintenance yards and facilities, etc.; and
 - information on portables, including numbers, locations, remaining useful life (as appropriate to educational standards), etc.
3. Forecast of Future Facility Needs, including:
 - identification of new schools and/or school additions needed to address existing deficiencies and to meet demands of projected growth over the next 6 years; and
 - the number of additional portable classrooms needed.
4. Forecast of Future Site Needs, including:
 - the number, size, and general location of needed new school sites.
5. Financing Program (6-year minimum Planning Horizon)
 - estimated cost of specific construction and site acquisition and development projects proposed to address growth-related needs;
 - projected schedule for completion of these projects; and
 - proposed sources of funding, including impact fees (if proposed), local bond issues (both approved and proposed), and state matching funds.
6. Impact Fee Support Data (where applicable), including:
 - an explanation of the calculation methodology, including description of key variables and their computation;
 - definitions and sources of data for all inputs into the fee calculation, indicating that it:
 - a) is accurate and reliable and that any sample data is statistically valid;
 - b) accurately reflects projected costs in the 6-year financing program; and
 - a proposed fee schedule that reflects expected student generation rates from, at minimum, the following residential unit types: single-family, multifamily/studio or 1-bedroom, and multi-family/2-bedroom or more.

Plan Performance Criteria

1. School facility plans must meet the basic requirements set down in RCW 36.70A (the Growth Management Act). Districts proposing to use impact fees as a part of their financing program must also meet the requirements of RCW 82.02.
2. Where proposed, impact fees must utilize a calculation methodology that meets the conditions and tests of RCW 82.02.
3. Enrollment forecasts should utilize established methods and should produce results which are not inconsistent with the OFM population forecasts used in the county comprehensive plan. Each plan should also demonstrate that it is consistent with the 20-year forecast in the land use element of the county's comprehensive plan.
4. The financing plan should separate projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
5. Plans should use best-available information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. District-generated data may be used if it is derived through statistically reliable methodologies.
6. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources in the event that impact fees are not available due to action by the state, county or the cities within their district boundaries.
7. Repealed effective January 2, 2000.

Plan Review Procedures

1. District capital facility plan updates should be submitted to the County Planning and Development Services Department for review prior to formal adoption by the school district.
2. Each school district planning to expand its school capacity must submit to the county an updated capital facilities plan at least every 2 years. Proposed increases in impact fees must be submitted as part of an update to the capital facilities plan, and will be considered no more frequently than once a year.
3. Each school district will be responsible for conducting any required SEPA reviews on its capital facilities plan prior to its adoption, in accordance with state statutes and regulations.
4. School district capital facility plans and plan updates must be submitted no later than 180 calendar days prior to their desired effective date.
5. District plans and plan updates must include a resolution or motion from the district school board adopting the plan before it will become effective.

Student Generation Rate Report

for the Lake Stevens School District

Date: April 28, 2022

Student Generation Rate Report

Prepared for

Robb Stanton

Executive Director, Operations – Lake Stevens School District

12309 22nd St NE, Lake Stevens, WA 98258

Blueline Job No. 22-120

Prepared by: Chase Killebrew, AICP

Reviewed by: Eric Jensen

This report shows the estimated number of students for each grade that is typically generated by different dwelling unit types within the Lake Stevens School District (LSSD). These student generation rates (SGRs) assist in predicting future enrollment for the short-term and long-term planning horizons as development and redevelopment change the mix of housing types in the district. SGRs are also used in the school impact fee formula to determine the per dwelling unit cost of needed new school capacity.

This document describes the methodology used to calculate SGRs for the LSSD and provides the findings of those calculations. SGRs were calculated for two types of residential construction: single-family detached and multifamily. Manufactured homes are included in the single-family detached classification. Single-family attached units such as condominiums, townhomes, and multiplexes are included in the multifamily classification.

Electronic records were pulled from the Snohomish County Assessor's FTP Data Downloads webpage. The specific dataset titled *Improvement Records* was filtered to only contain residential development data from the past 5 years (2017 – 2021). This table was brought into ArcGIS. Using a shapefile of the LSSD boundary, all the records attached to parcels located within LSSD were selected, creating a new LSSD-specific table. The table was divided by single-family versus multifamily development. Then the multifamily list was divided by number of bedrooms, where all units containing 1 bedroom or less are grouped and units containing 2 or more bedrooms are grouped. No multifamily units containing 1 bedroom or less were found in this data. Also, no developments containing more units than a duplex (two units) were found in this data.

The School District provided Blueline with student records data including the addresses and grade levels of all P2-12 students attending the Lake Stevens School District as of January 2022. This data containing 9,877 students was reformatted so the addresses matched the style of the LSSD Improvement Records address data.

There were 1,989 records indicating construction of new single-family detached units. These were cross-referenced and matched with the student records data, and the matches were tallied by grade level. The same was done for the 130 multifamily (2+ bedroom) records. The tables displaying the results are shown on the following page.

	SINGLE-FAMILY	MULTIFAMILY (0-1 BR)	MULTIFAMILY (2+ BR)	TOTAL
UNITS CONSTRUCTED IN LSSD (2017 - 2021)	1,989	0	130	2,119

February, 2022

Snohomish County Profile

Location

Snohomish County is located on Puget Sound, between Skagit County to the north and King County (and Seattle) to the south. Covering 2,090 square miles, it is the 13th largest county in total land area in Washington.

Snohomish County's varied topography ranges from saltwater beaches, rolling hills and rich river bottom farmlands in the west to dense forest and alpine wilderness in the mountainous east. Glacier Peak, at 10,541 feet, is the highest point in Snohomish County and one of the highest in Washington State. Sixty-eight percent of the county land area is forest land, 18% is rural, 9% is urban/city and 5% is agricultural.

Population

The total population of Snohomish County was estimated to be 837,800 as of April 1, 2021 (revised), according to the Washington State Office of Financial Management. This includes a total unincorporated population estimate of 371,300 (44% of total county population) and a total incorporated (city) population estimate of 466,500 (56% of total county population).

Linda Hjelle
Snohomish County Assessor

A Message From the Assessor:

Which Year Are We Talking About?

2020
Market Evidence

2021
Assessment Date

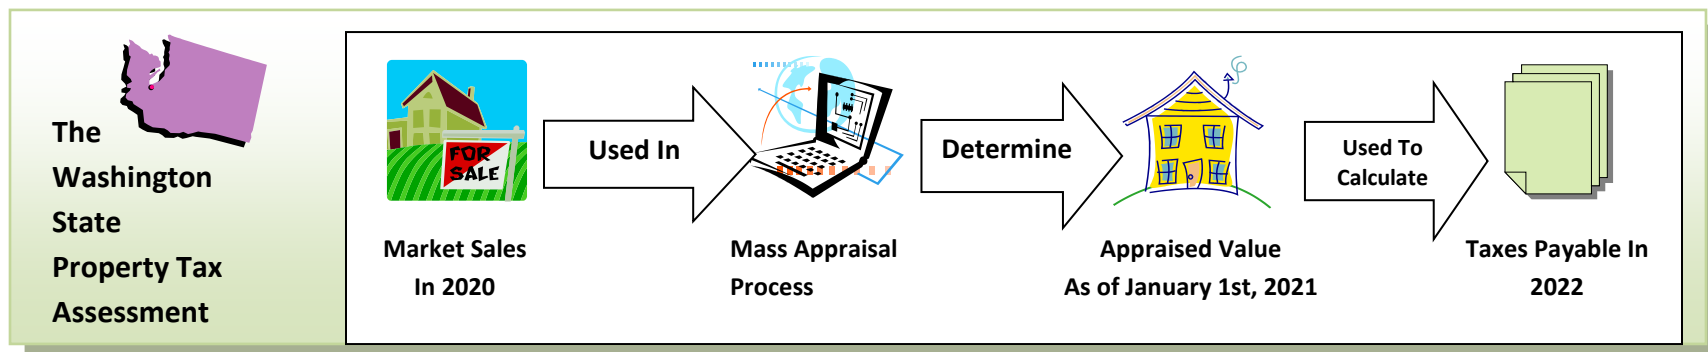

2022
Taxes Owing

Hello,

This annual report provides general information on the property tax system in Washington State as well as specific details of the Snohomish County taxing district levies and property taxes to be collected. Annual reports for tax years 2002 thru 2022 are available on our website at: <http://www.snohomishcountywa.gov/2208/Assessors-Annual-Reports>

When talking about assessments, it's easy to be confused about which year we are referring to. Is it the market evidence year, the assessment year or the taxes owing year? This report is about property taxes collected in 2022. However, it's important to note that state law requires us to use the Jan. 1st, 2021 assessment date in calculating taxes and levies due in 2022. These values were based on sales that primarily occurred in 2020.

Sales that occurred in 2021 will be used to calculate the new 2022 assessments, which will be used to calculate taxes due in 2023. The 2022 assessment notices for most properties will be mailed in June of 2022.

My press release dated January 26, 2022 regarding 2022 property taxes and levies is available at:
<https://www.snohomishcountywa.gov/DocumentCenter/View/87794/2022-Property-Tax-Information?bidId=>

The following is an example of some of the information available in this press release:

Property taxes to be collected this year by all taxing districts in Snohomish County will show an overall 6.05% increase over last year. Property taxes for all purposes will total \$1.583 billion in 2022, up \$90.3 million over 2021's \$1.493 billion that was levied for all taxing districts.

Property tax relief is available for limited income senior citizens/people with disabilities. Legislation was passed in 2019 that provided changes to the program beginning in 2020 increasing the amount of disposable income you can have and qualify.

For the 2022 property tax year, the disposable income threshold for Snohomish County residents participating in and applying for the Senior Citizens/People with Disabilities Exemption program is \$55,743. Participants are required to reside in their principle residence located in this county for 6 months per calendar year to qualify for 2022 tax relief.

The State Legislature passed SHB 1438 in 2021 which also expanded eligibility for the exemption program in 2022, by allowing deductions for common health care related items. Newly deductible costs can include but are not limited to the costs of Medicare supplemental insurance, durable medical equipment, mobility enhancing equipment, prosthetic devices and naturopathic medicines.

Excellence in achieving professional assessment performance standards:

We are pleased to announce that we continue to achieve excellent results in appraising property according to state law and professional assessment standards. If you would like more information on the real property appraisal performance standards and statistics for our county, I encourage you to read the Washington State County Comparison reports at:

<https://dor.wa.gov/about/statistics-reports/comparison-county-assessor-statistics-reports> and the Washington State Legislature's Ratio Study reports for 2001 through 2017 at: http://dor.wa.gov/content/aboutus/statisticsandreports/stats_realproperty.aspx

Information Tools - Snohomish County On-line Property Information (SCOPI) and New Tax Distribution Tool:

SCOPI is a great tool for property owners that enable them to easily access the information we have on file for their property and to review recent sales in their neighborhood. Information can be accessed using either an address, an assessor parcel number or by locating a property visually on a map at: <https://www.snohomishcountywa.gov/5414/Interactive-Map-SCOPI>

The Tax Distribution Tool is also a popular tool on our website. It allows property owners to view a breakdown of where their taxes go by levy and taxing district. It also compares the changes and amounts over the past three years.

I would like to thank my staff once again for their continued hard work, their commitment to excellent customer service and their dedication to providing fair and equitable assessments for all property owners in Snohomish County.

Please feel free to contact us if you have any questions or suggestions on how to improve our annual reports or services.

Sincerely,
Linda Hjelle, Snohomish County Assessor

Available Information

Much of the property information that may be helpful to you is available for your inspection at our front counter and on-line at: <http://www.snohomishcountywa.gov/175/Assessor>. This includes:

- Property characteristics
- Property assessed taxable value history
- Property sales
- Name and address of taxpayer
- Maps

You may obtain a photocopy of any of this information on a particular property for a small fee.

Office hours are Monday through Friday 9:00 a.m. to 5:00 p.m., except holidays.

For your convenience, our Customer Service Center is located on the 1st floor of the Robert J. Drewel (Administration East) building, 3000 Rockefeller Avenue, Everett, Washington.

Mission Statement

Our mission is to administer a property assessment system, that meets constitutional and statutory requirements, in an efficient and professional manner, while striving to provide excellence in service to our customers.

Nature of the Assessor's Program

Function:

To administer the assessment and levy of property taxes in Snohomish County.

Scope:

The listing of all taxable real and personal property within the geographic boundaries of Snohomish County are within the office's jurisdiction, including property within incorporated cities.

Participants:

- Persons seeking exemptions or inclusion in a special program
- Taxpayers whose property is being appraised
- Representatives of taxing districts
- Persons seeking public information by phone, mail, or over the counter
- Persons appealing property tax assessments
- Employees of this office
- Employees of other agencies

General Activities:

- Appraisal of property
- Assessment of personal property (primarily business equipment)
- Administration of exemption programs (senior citizen and non-profit)
- Administration of special programs (e.g., open space, forest land)
- Public information
- Assessment roll maintenance (legal description changes, subdivisions, maps)
- Appeals processing
- Setting tax levies

Important Dates

Jan. 1*	Real and personal property is subject to taxation and valuation for assessment purposes as of this date.
Jan. 15*	County assessor delivers tax roll to county treasurer and provides an abstract of the tax rolls to the county auditor.
April 30*	Personal property listing forms due.
April 30*	First half taxes due.
May 31	End of revaluation cycle.
July 1	Filing deadline for Board of Equalization appeals.
July 15	Board of Equalization meets in open session.
Aug. 1	Most taxing district boundaries must be established.
Aug. 31	Last day Assessor can add new construction value.
Oct. 1*	Last day to file for exemption on historic property.
Oct. 3	County begins budget hearings.
Oct. 31	Second half property tax due.
Nov. 30	City and other taxing district budgets are due to the County Legislative Authority.
Nov. 30	Tax certifications and the amount levied per taxing district are due to county assessor.
Dec. 31*	Deadline for open space assessment applications.

*If a due date falls on a Saturday, Sunday or legal holiday, the due date changes to the next business day (RCW 1.12.070)

Snohomish County Tax Roll Summary 2021 Assessment - 2022 Tax Year

Locally Assessed:

	Taxable Value (100%)
Real Property in Unincorporated Area	
Land.....	\$35,765,885,218
Improvements.....	\$36,557,539,830
Subtotal:.....	\$72,323,425,048
Real Property in Incorporated Area	
Land.....	\$42,413,096,462
Improvements.....	\$49,738,709,991
Subtotal:.....	\$92,151,806,453
Personal Property in Unincorporated Area.....	\$709,486,190
Personal Property in Incorporated Area.....	\$4,045,539,557
Subtotal:.....	\$4,755,025,747

State Assessed:

* Utilities in Unincorporated Area.....	\$506,219,684
* Utilities in Incorporated Area.....	\$563,488,708
Subtotal:.....	\$1,069,708,392
* State Boat Value.....	\$0
TOTAL VALUE OF ALL TAXABLE	\$170,299,965,640

Total 2021 taxable value of Snohomish County listed above includes new construction value & an increase in utilities value in the amount of \$2,025,879,927 (\$2,025,879,927 new construction value + \$0 utilities)

*State Assessed = Assessed by State of Washington Department of Revenue

Note: The assessment date of January 1st, 2021 and new construction assessment date of July 31st, 2021 are used to calculate 2022 taxes.

Significant Events in the History of Property Tax in Washington State

1853 – Territorial government established; all taxes to be assessed uniformly; exemption for property of the United States, churches and benevolent institutions.

1889 – State Constitution adopted — property to be assessed uniformly. Legislature may grant exemptions.

1929 – 14th Amendment to state constitution: classification of property allowed. All real estate is one class; taxes to be uniform on the same class of property.

1935 – Revenue Act exempted all household goods and personal effects.

1944 – 17th Amendment to state constitution: added 40 mill limit. Property to be assessed at 50% of true and fair value.

1955 – Property revaluation cycle established — 4 year interval.

1965 – 47th Amendment to the state constitution allows senior citizen exemption.

1967 – Senior citizens exempt from first \$50.00 of real property tax. Barlow v. Kinnear provided the state with assessment equalization power.

1968 – Current use assessment provided for open space, timber and agricultural lands.

1969 – State revaluation plan instituted to realize the 1955 revaluation act. Carkonen v. Williams mandated a 50% ratio of assessed to market value.

1971 – \$50.00 senior citizen exemption replaced by varying exemption from special levies depending on income. Annual increase in regular levies of taxing districts limited to 106% of the largest prior levy. Annual update of values permitted.

1972 – Home improvement exemption created. Constitutional limit of 1% of market value enacted for all regular levies.

1973 – Assessment level increased from 50% to 100% of true and fair value, for 1975 taxes.

1974 – Ten year phase-out of property tax on inventories authorized

1975 – 100% assessment ratio implemented. Statutory rate limit reduced to \$9.15 per \$1,000 assessed value. Deferral of property taxes and special assessments allowed for senior citizens with income of less than \$8,000.

1976 – 64th Amendment to state constitution permits school districts to seek voter approval of two year special levies.

1978 – Seattle School District v. State requires full state funding of K-12 education.

1979 – State levy for common school support subject to 106% limitation.

1981 – Interest rate on delinquent property taxes increased from 8% to 12%. New penalty of 11% for first year delinquencies.

1982 – Physical inspection may take six years, if values updated annually.

1983 – Business inventories eliminated from property tax and assessment rolls, effective in 1983 for 1984 collections.

1984 – Legal requirements for payment of penalties and interest on delinquent taxes relaxed. Senior Citizen Exemption qualifications revised:

1985 – Provision made for special valuation of eligible historic property. Benefit rating system authorized.

1986 – Limited waiver of the 106% limit may be placed before the voters. Levies for school capital purposes may be made for up to 6 years with voter approval.

1987 – Interest rates on property tax refunds increased.

1988 – New construction valuation date of July 31 upheld. State school levy removed from \$9.15/\$1,000 limitation for proration purposes. Local appeal date set at July 1. Personal property affidavit filing deadline set at April 30.

1989 – Business personal property exemption raised to \$3,000. Deadline changed for determining boundaries of newly incorporated cities. Washington Condominium Act passed.

1990 – Regular levy limitation of \$5.55/1,000 of assessed valuation increased to \$5.90/1,000 and proration procedures modified. Personal property equalized based on assessment level of preceding year.

1992 – Appellants may appeal directly to State Board of Tax Appeals, bypassing local appeals board. Manifest errors no longer reviewed by the county Board. Assessor may stipulate to value of appealed property with concurrence of appellant. Four-year renewal required for Senior Citizen exemption.

1993 – Voter-approved regular levy for low-income housing authorized for cities and counties (above statutory and \$5.90 limits).

1994 – Tax bill required to show percent of voted and non-voted tax. Certain deadlines for providing information in valuation appeals altered.

1995 – Senior citizen income limit raised; values frozen as of 1/1/95. Deferral income, age and parcel size limits changed. New exemption created for multi-unit dwellings in designated urban centers.

1996 – Revaluations out-of-cycle and error corrections allowed for value-affecting changes in land use restrictions.

Significant Events in the History of Property Tax in Washington State

1997 - All intangible personal property made tax-exempt. Appeals allowed up to 60 days after notification of value change. Referendum 47 imposes additional requirements on the 106% limit.

1998 – The value averaging portion of Referendum 47 is ruled unconstitutional by the Washington State Supreme Court. Senior exemption eligibility and benefits were liberalized.

2000 – I-722 passed in November mandating a roll back of assessed values to January 1, 1999 levels and limiting future increases of taxable value to 2% per year.

It also limited taxing district non-voted property tax increases to 2%, and rolled back certain property tax increases levied for 2000. The initiative was not implemented because the Washington State Supreme Court unanimously ruled it unconstitutional on September 20, 2001.

2001 – I-747 passed in November which restricts taxing districts to a 1% monetary aggregate increase over their prior highest lawful levy. Effective for the 2002 tax year.

2002 – The cost of new or rehabilitated housing exempt under RCW 84.14 is to be counted as new construction for levy purposes upon expiration of the exemption.

2003 – Lid-lifts for counties, cities and towns may be approved for a six-year period with one vote. The ballot measure must contain the limit factor to be used each year. The limit factor may exceed 1% and may differ each year.

2004 – Property belonging exclusively to federally recognized Indian tribes is eligible for exemption if the property is used for essential government services. Regional fire protection service authorities are created that may raise money through regional sales & use taxes, benefit charges or property taxes. Senior citizen exemption qualifications are revised.

2005 – Senior citizen & disabled person's exemption was extended to veterans with 100% service-connected disability. Taxing district's budget certification deadline was moved to November 30th. A property tax exemption was created for newly installed sprinkler systems in nightclubs. A new program of grants for payment of property taxes is created for widows & widowers of certain honorably discharged veterans. Statutes for special districts were amended. To require use of the reduced assessed value for forest lands, agricultural lands or open space lands. Fire districts may protect up to 25 cents of the 2nd & 3rd levies from proration.

2006 – Nonprofit exemptions for public assembly halls, veteran's organizations, schools & colleges were revised to allow expanded uses & rentals. A citizen commission for Performance Measurement of Tax Preferences was created by the Legislature. Senior Property Tax Deferral Program interest rate was lowered from 8% to 5%. Local Infrastructure Financing Tool was enacted. Locally assessed, newly constructed wind turbines may be included like new construction in the levy limit calculation. I-747 was declared unconstitutional by the King County Superior Court. The Attorney General filed an appeal and was granted a stay.

2007 – The King County Superior Court Decision of I-747 being unconstitutional was upheld by the Supreme Court. As a result, the State Legislature, in a special session, reinstated the 1% limit factor adopted by the voters. The ability to request multiple year lid-lifts was extended to all taxing districts. The effective date for establishing boundaries for most taxing districts was changed to August 1st. The use of school district capital projects funds was expanded to include technology. A simple majority vote is only required for school districts excess capital, maintenance and operation, and transportation levies.

2008 – Single year and multiple year lid lifts are considered temporary unless the ballot proposition approved by voters makes the increase permanent. Counties, cities, and towns may create a beach management district. An advance tax is no longer required to be paid prior to recording a binding site plan with the county auditor.

2009 - Property tax resulting from levy lid lifts can be used to supplant existing funds beginning with levies submitted and approved by the voters after July 26, 2009. The statutory maximum levy rate of county ferry districts was changed from \$0.75 per thousand dollars of assessed value to \$0.075 per thousand dollars of assessed value in counties with a population of 1.5 million or more. A new transit levy was created in counties with a population of 1.5 million or more to expand transit capacity along State Route 520 and other transit-related purposes. The maximum statutory levy rate is \$0.075 per thousand dollars of assessed value. Abated taxes due to destroyed property may be recouped in the levy process even if the refund was not made.

2010 - A new community facility district may be formed to provide voluntary financing for community facilities and local, sub regional, and regional infrastructure. Regional Transit Authority (RTA) When an area outside of the RTA is annexed to a city or code city located within the boundaries of an RTA, the annexed area is simultaneously included within the boundaries of the RTA.

Significant Events in the History of Property Tax in Washington State

2010 (continued) Annexation indebtedness- All property located within the boundaries of a city, partial city, or town annexing into a fire protection district and which is subject to an excess levy by the city or town for the repayment of debt incurred for fire protection related capital improvements that was incurred prior to the annexation is exempt from voter-approved property taxes levied by the annexing fire protection district for the repayment of indebtedness issued prior to the effective date of the annexation. Fire protection districts may be authorized in areas both inside and outside of cities and towns. Also a city or town adjacent to a fire district may be annexed into such a fire district provided the population of the city or town does not exceed 300,000. School districts may return to voters after they have received voter approval for a M&O levy requesting additional levy authority if the district's levy base or maximum levy percentage has increased since the initial levy.

2011 - The boundary of a county with a population of 1.5 million or more does not include the area located within a city that has boundaries in two counties for EMS levy purposes. The locally assessed value of all property in the area of the city within the county with a population greater than 1.5 million must be less than \$250 million. A flood control zone district may protect up to \$0.25 of their levy rate outside of the \$5.90 limitation. The district must be located in a county with a population of 775,000 or more and whose boundaries are coextensive with the county. The protected rate is subject to early prorationing due to the constitutional 1 percent limitation. This protection applies to levies collected in 2012 through 2017. Municipal airports were added to fire districts, cities, towns, port districts, and Indian tribes that can participate in a regional fire protection service authority.

Metropolitan Park Districts with a population greater than 150,000 located in a county with a population of 1,500,000 or more, can protect up to \$0.25 of their levy outside of the \$5.90 levy limitation with voter approval. The protected rate is subject to early prorationing in the constitutional one percent levy limitation.

2012 - EMS Levies- An "uninterrupted continuation" renewal of a 6-year or 10-year EMS levy only requires a majority vote and does not require any validation requirements. The second levy must have the same previously approved levy rate by the voters to qualify as a continuation. Benefit Assessments - Cities and towns that have annexed territory previously serviced by a fire district since 2006 or is currently in the process of annexing may impose a fire benefit charge to impose fire protection services.

Personal Property Amnesty - The county legislative authority may authorize the assessor to waive penalties for assessment years 2011 and prior for a person or corporation failing or refusing to deliver to the assessor a list of taxable personal property under certain circumstances. Taxpayers receiving penalty relief may not seek a refund or otherwise challenge the amount of tax liability. School District Insolvency – Criteria for a financially insolvent school district was identified and a process established describing how the district is dissolved or transferred to one or more contiguous school districts. Rehabilitated Multi Unit Dwelling Exemption – Counties may authorize a property tax exemption for new and rehabilitated multiple-unit dwellings in certain unincorporated urban centers.

2013 - Veterans' and Mental Health/Developmental Disabilities Earmarked Funds – These earmarked funds may be increased or reduced in the same proportion as the regular county property tax levy, as approved by the county legislative authority. Voter Approval for Fire District Benefit Assessment Charges - The continued imposition of a benefit charge is subject to voter approval by a simple majority, rather than supermajority, of the voters living within the jurisdiction of the fire protection district. Refund Levies – In addition to taxing districts levying for refunds made or to be made, they can levy for taxes that have been cancelled from the tax roll offset by taxes that have been supplemented to the tax roll. Valuation of Publicly Owned Property - The requirement for assessors to determine the value of publicly owned property not subject to property tax is eliminated. However, when the exempt status no longer applies as a result of a sale or change in use, an assessor must value and list the property. A leasehold excise tax credit is eliminated for certain leasehold interests for the amount, if any, that the tax exceeds the property tax applicable if the property were privately owned. Electronic Notification - Assessors may send by electronic means assessments, notices, or other information that they would otherwise be required to send, or would customarily send, by regular mail.

2014 - New construction - The assessed value of solar, biomass, and geothermal facilities that generate electricity and operate entirely within a single county to be treated like new construction for purposes of calculating property tax levy limits. Refund claim- Relieves property owners of the necessity to file a claim for refund when the refund is the result of an order from a board of equalization, the State Board of Tax Appeals, court decision, or decisions made by the county treasurer or

Significant Events in the History of Property Tax in Washington State

2014 (continued) assessor within 3 years of the tax due date. The refund can also be made without a claim when the county assessor or Department of Revenue approves a property tax exemption authorized under chapter 84.36 RCW within 3 years of the tax due date. Merger of timber land into DFL - A county legislative authority is allowed to merge its timber land classification into designated forest land (DFL) and terminate the timber land classification. Larger tax base for excess levies if merged. Distribution percentage of timber excise tax may change per taxing district within a county.

2015 - Conservation district's maximum rate per parcel was adjusted. The January 1, 2018, expiration date allowing countywide flood control zone districts located in a county with a population over 775,000, authority to protect up to \$0.25 of its property tax levy rate from reduction or elimination under the \$5.90 aggregate rate limit was removed. Additionally, beginning with taxes levied for collection in 2018, countywide flood control zone districts in counties located in the Chehalis River Basin can also protect up to \$0.25 of its property tax levy rate from reduction or elimination under the \$5.90 aggregate rate limit. To provide port districts greater flexibility when financing industrial development district (IDD) projects, the IDD levy may be spread over a period of 20 years. The total aggregate amount levied over the 20-year period cannot exceed what could have been collected in a six-year period at the annual rate of \$0.45 per \$1,000 assessed value. The county legislative authorities may authorize a refund on a claim filed more than three years after the payment due date if the claim is for taxes paid as a result of a manifest error in the description of the property and the correction would result in a refund or reduction of taxes for the property owner.

2016 - Cities and towns may levy a special assessment and or obtain a lien to reimburse for expenses of nuisance abatements. New state land finance tool (SLIFA) - Limited cities can fund public improvement within the state land financing area. All taxing districts that offer services to the area will finance the improvements, with the exception of the state school levy and excess levies.

2017 - The State school levy (EHB 2242): An additional second part was added to the levy for collection year 2018 and thereafter. For taxes due in collection years 2018 through 2021 the aggregate levy rate is \$2.70 per thousand dollars assessed value. Part 1 of the levy is not subject to the levy growth limit in chapter 84.55 RCW for collection years 2019, 2020, and 2021. Part 2 of the levy is not subject to the levy growth limit in chapter 84.55 RCW for collection years 2018 through 2021. The levy rates from the 2018 collection year are fixed for the 2019, 2020, and 2021 collection years. Individuals who qualify for the senior

citizen/disabled person property tax exemption are exempt in full from Part 2 of the levy. Farm machinery and equipment is exempt from Part 2 of the levy. For collection year 2022 and thereafter the aggregate rate limit is \$3.60 per thousand dollars assessed value. For collection year 2022 and thereafter both parts of the levy are subject to the levy growth limit in chapter 84.55 RCW. Local school district levies (EHB 2242): Maintenance and Operation levies are renamed Enrichment levies as of the 2019 collection year. Transportation Vehicle levies are renamed Transportation Vehicle Enrichment levies as of the 2019 collection year. Enrichment levies cannot exceed the lesser of \$1.50 per thousand dollars assessed value or \$2,500 per pupil. The per pupil limitation must be increased by inflation beginning in 2020. Enrichment levies for collection in 2020 and thereafter, require a school district to receive approval of an enrichment levy expenditure plan by the Office of Superintendent of Public Instructions before the levy proposition can go to the ballot. The requirement to have a full-time paid employee or contract for a full-time employee is removed allowing all fire districts to have a statutory maximum levy rate of \$1.50 per thousand dollars assessed value (HB1166). The highest lawful levy for regional fire service protection authorities (RFA) is now calculated as if they did not levy a benefit assessment (SHB 1467).

County treasurers may provide taxpayers annual property tax statements electronically (EHB 1648). A city, county, or contiguous group of cities or counties can limit the purpose and or statutory maximum levy rate for the district upon creation of a metropolitan park district (SSB 5138). Fire districts can annex a city or town with a population of 300,000 or less if the city or town is located within a "reasonable proximity" to that fire district. Fire districts can also merge with one another when they are within a "reasonable proximity" of each other. Reasonable proximity is a geographical area near enough to each other so that governance, management, and services can be delivered effectively (SB 5454). Voters can approve the creation of a fire district with the same boundaries of a city or town. When this occurs, the city or town must reduce its general fund regular property tax levy upon creation of the fire district (ESSB 5628).

2018 - Fire districts or RFAs may annex land, or participate in a merger, when the boundaries are located "within a reasonable proximity," rather than "adjacent" to the district or RFA.

Cities and counties may request the voters to approve a levy lid lift with a condition that exempts taxpayers who qualify for a Senior Citizen/Disabled Person exemption under RCW 84.36.381 from paying the increased levy amount.

Significant Events in the History of Property Tax in Washington State

2018 (continued) Property taxes by a regional transit authority district, under RCW 81.104.175, may not be imposed on less than a whole parcel situated within the boundaries of the district. Only those real property parcels that are wholly located within the boundary of a regional transit authority district are subject to the property tax.

EMS levies: Voter requirement is reduced to a simple majority approval for non-initial EMS levies.

2019 - School district enrichment levies limits increased to the lesser of \$2.50 per \$1,000 assessed value or \$2,500 per full-time student in districts with less than 40,000 students, or \$3,000 per full-time student in districts with 40,000 or more students. The per-pupil limit will be increased annually by inflation.

Upon an unresolved finding in a State Auditor report, the amount of the finding must be reduced from a school district's enrichment levy.

A new tax increment financing tool is created for the development of commercial office space in cities in a county with a population of less than 1,500,000. The program can use a local sales and use tax program and local property tax reinvestment program to incentivize the development of commercial office space. The income thresholds for the Senior Citizen/Disabled Person Exemption program are updated:

- Income threshold 1 is the greater of \$30,000, or 45 percent of the median household income for the county.
- Income threshold 2 is the greater of \$35,000, or 55 percent of the median household income for the county.
- Income threshold 3 is the greater of \$40,000, or 65 percent of the median household income for the county.
- Income thresholds can never be less than the previous year.

Veterans' with a service-connected disability evaluation of 80 percent or higher, or being paid at the 100 percent rate because they are unemployable due to their service-connected disability may qualify for the property tax exemption program. The deferral program threshold is increased to the greater of \$45,000 or 75 percent of the median household income for the county. A graduated real estate excise tax is implemented: 1.1 percent if the selling price is equal to or less than \$500,000; 1.28 percent on the portion of the selling price that is greater than \$500,000 but equal to or less than \$1,500,000; 2.75 percent on the portion of the selling price that is greater than \$1,500,000 but equal to or less than \$3,000,000; and 3 percent on the portion of the selling price that is greater than \$3,000,000. A rate of 1.28 percent is imposed on the sale of undeveloped land, timberland, agricultural land, and water or mineral rights, regardless of selling price.

2020 - The term limit for bond debt for rural county library, intercountry rural library, and island library districts is increased from six years to 20 years. A single ballot measure asking the voters to approve the creation

of a library capital facility area may also include how the area will be financed. Supermajority voter approval is required to approve the ballot measure. Fire districts and regional fire protection districts can ask the voters to approve a continued 10 year benefit assessment or permanent benefit assessment. A new method of annex property into a code city by using an interlocal agreement is available to prevent illogical boundaries or "islands". The county legislative authority may levy a separate levy or special assessment if the county assumes responsibility for services previously provided by a dissolved district. A second date for assessors to certify the assessment to the board of equalization has been created. If the county has extended the appeal deadline past 30 days, the county assessor must certify the assessment roll to the BOE on or before August 15.

2021 – Park and recreation districts in King County, located on an island, are not subject to the \$5.90 aggregate limit for that tax years 2022 through 2026. They remain subject to the 1 percent constitutional limit (HB 1034). Counties, cities, port districts, or any combination of may create a local tax increment financing area (LTIF) to finance public improvements. The levy limit for most taxing districts within the LTIF area is increased each year based on the increase in assessed value within the area, as long as the increased assessment is not included elsewhere in the levy limit calculations. The increased levy capacity is not carried forward as part of the district's highest lawful levy since 1985 (ESHB 1189). Real property characteristics may be reviewed in accordance with international association of assessing officer standards for physical inspection (EHB 1271). Levy certification dates were pushed back to December 15 for county levy purposes and the first Monday in December for the county legislative authority to certify the levy amounts for other taxing districts to the county assessor. The November 30 certification date remains unchanged for those districts, other than for county purposes, authorized to certify directly to the county assessor (SHB 1309). Industrial/manufacturing facilities new construction exemption expanded from certain cities within Snohomish County to all cities in all counties (EHB 1386). The 2022 tax year school district enrichment levy per-pupil limit is based on the greater of the 2019/2020 or 2020/2021 school year average annual full-time equivalent students enrolled if the district was open for a minimum of 40 hours of in-person instruction per month (ESHB 1476). The affordable housing exemption is expanded. A new 20-year exemption for certain qualifying property is added and an opportunity for a 12-year extension on an existing exemption is added (E2SSB 5287). Three year single family dwelling exemption expanded through June 2026, when the dwelling was

Significant Events in the History of Property Tax in Washington State

2021 (continued) damaged by a natural disaster occurring on or after August 31, 2020 (ESB 5454). In King County, revenues from levy lid lift approved in 2015-2022 may be used to supplant existing revenue (E2SHB 1069).

Commonly Asked Questions

Q: What does the County Assessor Do?

A: The Assessor sets the assessed value of all real and personal property within Snohomish County for tax purposes and sets the levy rates based on taxing district budget requests, statutory limits and property values. The Assessor's office also keeps track of ownership changes, maintains parcel boundaries, keeps descriptions of buildings and property characteristics up to date, administers tax exemptions and special use programs and analyzes trends in sales prices, constructions costs and rents in order to estimate the value of property.

Q: What is personal property?

A: Generally, personal property is mobile property used in conducting a business. The chief characteristic distinguishing personal property from real property is mobility. Business inventories are exempt from the property tax, as are household goods and personal effects.

Taxable personal property includes (but is not limited to): office machinery and equipment as well as supplies and materials which are not held for sale or do not become an ingredient or component of an article being produced for sale. Also assessable as personal property are: furniture, fixtures and equipment in commercial use; leased equipment, certain leasehold improvements, manufacturing machinery and equipment; agricultural machinery and equipment, contractor's, sawmill and logging machinery and equipment.

To find out more about personal property and to download forms, visit our website at:

<http://www.snohomishcountywa.gov/334/Personal-Property>.

Q: How often does the Snohomish County Assessor value personal property?

A: Annually. Personal property affidavits, which list taxable property by category, cost and the acquisition dates, are filed with the Assessor's office each year by the taxpayer and are due by April 30. The affidavits are used by the Assessor to value property for taxes due in the following year.

Q: What is real property?

A: Real property includes all land and any improvements, such as buildings attached to the land. Manufactured homes and mobile homes are also assessed as real property.

Q: How often does the Snohomish County Assessor re-inspect and appraise real property for tax purposes?

A: State law requires that the Assessor maintain a systematic revaluation program. All real property in Snohomish County is physically inspected at least once every six years. Approximately one sixth of the property in the county is re-inspected each year. The Assessor also adds value annually for new construction, remodeling, additions, subdivisions, etc. Beginning with the 2004 assessment for 2005 tax year, we changed to an annual reassessment program. All real property is now statistically updated every year and physically inspected at least once every six years.

To view the residential mass appraisal reports and detailed maps, visit our website at:

<http://www.snohomishcountywa.gov/349/Mass-Appraisal-Reports>.

Q: What laws affect how the Assessor appraises my property?

A: Washington State law requires Assessors to appraise property at 100 percent of its "true and fair market value" in money according to the "highest and best use" of the property. That means the Assessor must first know what similar properties are selling for, what it would cost to replace it, and what the current interest rates are for borrowing the money to buy or build properties like yours. There are three basic approaches to the valuation of real property:

- **Market or sales approach:** comparison of a property with the characteristics of similar properties that have recently been sold.
- **Cost approach:** estimate of the replacement cost of a structure and adjusting that estimate to account for depreciation.
- **Income approach:** analysis of a property's value based on its capacity to generate revenue for the owner.

Q: What is market value?

A: It is the amount of money a willing and unobligated buyer is willing to pay a willing and unobligated seller. In other words, it is the price most people would pay for your property in its present condition.

Q: Why do we have property tax?

A: Taxing authorities such as school districts, park districts and city councils adopt their budgets and levy taxes to deliver the services that taxpayers want and authorize. Taxing authorities require money to provide those services. Property taxes are also used to pay for special voter-approved measures such as school enrichment levies and bonds, and emergency medical levies.

Q: How are property taxes determined in a budget based system?

A: Property Tax Explanation:

Snohomish County Assessor's Office would like to thank the former Spokane County Assessor Ralph Baker for allowing us to publish his well written and easy to understand explanation of our Washington State property tax system for annual revaluation counties.

As Spokane County Assessor, I've received a number of inquiries that highlight broad misunderstanding of how our property taxes are determined and where limits apply. The best way I know to explain Washington's property tax system is with some simple illustrations.

Imagine a little city that consists of four homes, each exactly the same, and each appraised by the Assessor at \$100,000. Let's also say that the annual city budget for our imaginary city is \$1000. To raise the amount of the budget, each homeowner must pay \$250. Four homes each paying \$250 raises \$1000. Our property tax system is budget based. We tax enough to raise the amount in the budget. No more.

Let's say next year's budget remains at \$1000, but the Assessor doubles the assessed value of all the homes to \$200,000 each. Do the taxes on each of the homes change? No. To raise the budgeted amount, each must still pay \$250. In this example, the assessed value of each home doubled, but the tax didn't change.

Now let's get a bit more realistic and say that the values on the homes change differently. Suppose one home goes from \$100,000 to \$150,000. Two homes double in value to \$200,000 and the last home jumps up to a whopping \$250,000! Now what happens to the taxes? Well, the average value of the four homes is still \$200,000. So the taxes on the two homes that go to \$200,000 are unchanged. They are at the average and they each still pay \$250. The lowest valued home sees its tax go down to \$187.50, even though the assessed value goes up 50 percent! The home that jumped 150 percent to \$250,000 in value sees its property tax go up to \$312.50, a 25 percent increase. In the end, we still only raise \$1000 total to meet the budget. Interesting right?

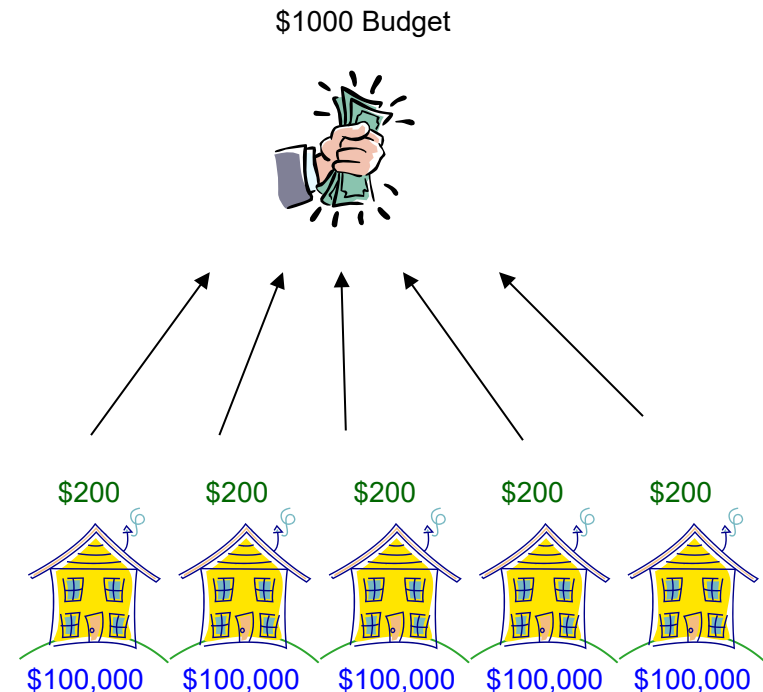

But wait. Normally budgets don't stay the same; they go up, right? Back in 2000, Washington State voters approved Initiative 747. I-747 limited annual budget increases to 1 percent unless voters approve a greater increase. In our imaginary city, the \$1000 budget can only increase 1 percent to \$1010 the following year unless the voters who live in the city approve a higher increase. While a Superior Court Judge recently ruled I-747 was unconstitutional, I suspect it will be back soon.

Our imaginary city gives simple illustrations of our property tax system. In reality, it's not so simple. In Spokane County *, there are about 202,000 properties (all different from each other), 116 tax code areas, and 57 tax districts. Although each property is in one tax code area, each property is in a number of tax districts because tax districts overlap. For instance, my mother lives in the house next door to mine. We both live in Fire District 10, however, she is in the Cheney School District while I'm in School District 81. The result is that even though we live right next to each other, we are in different tax code areas, and our total tax rates differ. The 57 tax districts in Spokane County are comprised of the county, cities, fire districts, emergency service districts, library, sewer, water, and cemetery districts, resulting in 116 tax code areas. Each tax district has an annual budget. To further complicate taxes, some property that crosses county lines, such as railroad property and telephone lines are assessed by the state. We also assess and tax business personal property. And we process senior and disabled exemptions and farm and agricultural valuation reductions. Spokane County's property tax system operates just like our imaginary little city, but on a much larger scale and with all these additional factors. Nonetheless, our computer systems allow very accurate calculation of property taxes.

Most taxpayers who call my office think there is a limit on increases to assessed values. Not so. Assessed values are driven by the real estate market. The limit is on the annual budget growth of the tax districts.

I have one more illustration that I think would be useful in our discussion. Let's look at what happens if someone moves into our little city and builds a new house. If we again say the assessed value of each home is the original \$100,000 but add a new home, look what happens to the individual property tax on each home. Five homes supporting the \$1000 budget means each home now pays only \$200 each. While growth brings more demand for government services, and is likely to push up demand for a greater budget, the initial effect is decreased taxes.

CFP 2022-27 Index #1-0014-0115
 New let's discuss appraisals. In assessor jargon, Spokane County is known as an "Annual County". That means all property is to be adjusted back to fair market value every year. While we reappraise only 1/6th of our county each year, we update the valuation of all property annually. All property is valued based upon the sale of comparable homes. With our real estate market as active as it is, and with home prices moving up so quickly, we have worked hard in the Assessor's Office to keep up. Many people ask if the real estate market "bubble" bursts and prices begin to decline, will the assessed value decline with it? The answer is yes. We will follow the market. But recall the examples above; we will still raise the amount of the budget. Declining values would not necessarily mean lower taxes.

I hope this discussion helps you understand how our system works. You control your taxes at the ballot box. It is vitally important that our citizens carefully consider all levy issues they are asked to vote upon.

Sincerely,

Ralph Baker, Spokane County Assessor

Continuing with using the last example from Spokane County. Let's look at what happens if home values decline from \$100,000 to \$75,000. The new assessed value is \$75,000 with the budget of \$1,000 increasing by 1 percent or \$1,010. Look what happens to the individual property tax on each home. Five homes supporting the new \$1,010 budget means each home now pays the amount of \$202 each. Although the assessed value decreased by \$25,000 the budget increased by 1 percent and property owners pay \$2 more.

***In Snohomish County there are approximately 304,666 properties, 377 tax code areas, and 68 tax districts.**

Q: If assessed value increases, do taxes have to increase in a budget based system?

A: No. Raising property values does not increase taxes. Taxing districts' budgets are limited by how much their budgets can increase under the 1% Levy Limit. For example, let's say a portion of your tax bill is for a city:

- The city taxing authority decides how much money the property tax has to collect that year, say \$1 million.
- Assessors estimate the total assessed value (A/V) of all taxable property within the city, say \$500 million.
- A tax rate (levy rate) is calculated by dividing the amount of tax to be raised by the total A/V of the city: \$1 million/\$500 million = \$2 per thousand dollars of A/V.
- If your home's assessed taxable value is \$100,000, your share of the taxes will be: $.002 \times \$100,000 = \200 .
- If the assessed taxable value of property within the city doubles to \$1 billion, and the amount to be raised stays the same, the tax rate will be: \$1 million/\$1 billion = \$1 per thousand dollars of A/V.
- Your taxes, if your home doubles in value, will still be \$200: $0.001 \times \$200,000 = \200 .

Q: If assessed values decrease, do property taxes automatically decrease in a budget based system?

A: No, not unless the decrease in assessed value for a taxing district causes the taxing authority to exceed the statutory limit for its regular levy rate. For example, let's say a portion of your tax bill is for a taxing district:

Example One:

Before values decrease and a taxing district is not at its statutory limit at \$2.00 per thousand dollars of assessed value.

- The taxing authority decides how much money the property tax has to collect that year, say \$1 million.
- Assessors estimate the total assessed value (A/V) of all taxable property within the district is \$1 billion.
- A tax rate (levy rate) is calculated by dividing the amount of tax to be raised by the total A/V of the district: \$1 million/\$1 billion = \$1.00 per thousand dollars of A/V.

- If your home's assessed taxable value is \$100,000, your share of the taxes will be: $.001 \times \$100,000 = \100

Example Two:

Before values decrease and a taxing district is at its statutory limit at \$2.00 per thousand dollars of assessed value.

- The taxing authority decides how much money the property tax has to collect that year, say \$1 million.
- Assessors estimate the total assessed value (A/V) of all taxable property within the district is \$500 million.
- A tax rate (levy rate) is calculated by dividing the amount of tax to be raised by the total A/V of the district: \$1 million/\$500 million = \$2.00 per thousand dollars of A/V.
- If your home's assessed taxable value is \$100,000, your share of the taxes will be: $.002 \times \$100,000 = \200

Example Three:

After values decrease, the calculated levy rate increases to \$4.00. The rate is still limited to \$2.00 without going to a vote of the people.

- The taxing authority decides how much money the property tax has to collect that year, say \$1 million.
- Assessors estimate the total assessed value (A/V) of all taxable property within the district is \$250 million. (A 50% reduction in assessed value from example two.)
- A tax rate (levy rate) is calculated by dividing the amount of tax to be raised by the total A/V of the district: \$1 million/\$250 million = \$4.00 per thousand dollars of A/V – which exceeds the \$2.00 limit and the district can not collect at \$4.00 – only at \$2.00. If your home's assessed taxable value is \$50,000, your share of the taxes will be: $.002 \times \$50,000 = \100
- This districts tax to be collected is reduced to \$500,000 instead of \$1 million.

Example Four:

After Values decrease and the taxing district's statutory limit is \$3.00.

- The taxing authority decides how much money the property tax has to collect that year, say \$1 million.

- Assessors estimate the total assessed value (A/V) of all taxable property within the district is \$450 million. (A 10% reduction in assessed value from the previous assessment.)
- A tax rate (levy rate) is calculated by dividing the amount of tax to be raised by the total A/V of the district: \$1 million/\$450 million = \$2.22 per thousand dollars of A/V – which does not exceed the \$3.00 limit and the district can collect at \$2.22.
- If your home's assessed taxable value is \$90,000, your share of the taxes will be: .00222 x \$90,000 = \$200.
- The districts tax to be collected is not reduced.

Note:

**Each tax code area will have a unique combination of separate taxing districts and associated levy rates.
Each individual property tax bill could be affected by all of the examples.**

Q: What is the statutory rate limit?

A: The regular levy of each taxing district cannot exceed a certain rate, which is determined by the type of district. For example, the levy for the county current expense fund cannot exceed \$1.80.

Q: What is the \$5.90 limit?

A: The aggregate regular levy rate of all senior and junior taxing districts (not including the state, port districts, public utility districts, emergency medical levies, affordable housing districts, conservation futures, county ferry districts, criminal justice, regional transit authority and transit levies) cannot exceed \$5.90.

Q: What is the 1% constitutional limit?

A: Washington's State Constitution limits the regular (not including port districts and public utility districts) combined property tax rate to 1 percent (e.g. \$10 per \$1,000) of assessed valuation. Voters may vote for special levies (such as school levies) that are added to this figure.

Q: What is Initiative 747?

A: Initiative 747, which was approved by voters in 2001, changed the amount a taxing district may levy. The regular property tax levy of a taxing district is limited to 101 percent of the highest levy since 1985, plus amounts attributable to new construction within the boundaries

of the district, increases due to newly constructed wind turbines and/or annexations to the district. Prior to I-747, the limit was 106 percent per Referendum 47. Please note that the initiative does not affect assessed values; it limits the amount a district may levy.

In 2006, I-747 was declared unconstitutional in the King County Superior Court. The Attorney General filed an appeal and the decision was upheld by the Supreme Court. As a result, in a special session held in the Fall of 2007, the State Legislature reinstated the limit factor adopted by voters under I-747.

Q: How do the taxing districts set the tax amount?

A: Every year the directors, councils or commissioners of all taxing districts meet in open session to determine the amount of taxes to be collected the following year. Public questions or comments are welcomed during this process. Once the budget has been adopted, the amount of taxes to be collected is certified to the County Assessor. The Assessor computes the levy rate required to raise the certified tax for each district and ensures that none of the constitutional or statutory limitations is violated. The County Treasurer mails tax bills on or about February 14 of the year in which they are collected and the receipts are distributed back to the various districts.

Q: Why did the State school levy increase?

A: In 2017, the Legislature passed EHB 2242 partly in response to the Supreme Court's McCleary decision. The Court found that the State was not meeting its constitutional requirement to fully fund basic education. EHB has several components and at least two will impact your tax bill now and in the future. The State school levy (EHB 2242):

- An additional second part was added to the levy for collection year 2018 and thereafter.
- For taxes due in collection years 2018, 2020 and 2021 the aggregate levy rate is \$2.70 per thousand dollars assessed value (equalized). SSB6614 reduced the 2019 rate to \$2.40 per thousand dollars assessed value (equalized).
- Part 1 of the levy is not subject to the levy growth limit in chapter 84.55 RCW for collection years 2019, 2020, and 2021.

- Part 2 of the levy is not subject to the levy growth limit in chapter 84.55 RCW for collection years 2018 through 2021.
- The levy rates from the 2018 collection year are fixed for the 2020 and 2021 collection years. The 2018 levy rates for part 1 is fixed for 2019 collection year, part 2 is the difference between this rate and \$2.40.
- Individuals who qualify for the senior citizen/disabled person property tax exemption are exempt in full from Part 2 of the levy.
- Farm machinery and equipment is exempt from Part 2 of the levy.
- For collection year 2022 and thereafter the aggregate rate limit is \$3.60 per thousand dollars assessed value.
- For collection year 2022 and thereafter both parts of the levy are subject to the levy growth limit in chapter 84.55 RCW.

Local school district levies (EHB 2242):

- Maintenance and Operation levies are renamed Enrichment levies as of the 2019 collection year.
- Transportation Vehicle levies are renamed Transportation Vehicle Enrichment levies as of the 2019 collection year.
- Enrichment levies cannot exceed the lesser of \$1.50 per thousand dollars assessed value or \$2,500 per pupil. The per pupil limitation must be increased by inflation beginning in 2020. Legislature passed ESSB5313 that will increase the rate from \$1.50 to \$2.50 beginning in 2020.
- Enrichment levies for collection in 2020 and thereafter, require a school district to receive approval of an enrichment levy expenditure plan by the Office of Superintendent of Public Instructions before the levy proposition can go to the ballot.

Q: What is a Tax Code Area (TCA)?

A: It is a geographical area in which local entities such as a city, county, school or fire district may assess taxes to sustain its operations. These combined taxing districts make up a Tax Code Area or TCA. In a county as large and diverse as Snohomish, there are hundreds of Tax Code Areas. TCA summaries can be reviewed as part of the Assessor's annual report for taxes, which also can be accessed online at: <http://www.snohomishcountywa.gov/333/Levy>

Q: What tax relief programs are available?

A: There are several exemption programs and special classifications available that provide tax relief. Please contact our Exemption Dept. at 425-388-3540 or visit our web site at:

<http://www.snohomishcountywa.gov/328/Exemptions> for more information.

- "Open Space Classification" for Agricultural land, Timberland, and Nature preserves.
- "Designated Forest land Classification" for timberland parcels 20 acres or more.
- "Historical Restoration Exemption" for historical significant property undergoing restoration.
- "Improvement Exemption" a temporary exemption of valuation of additions to single-family dwellings.
- "Destroyed Property Claim" adjustment to the valuation of destroyed property.
- Property tax exemptions for Senior citizens and disabled persons.
- Full tax deferrals for Senior citizens and disabled persons.
- Exemptions for qualifying property owned by non-profit organizations.
- Limited income deferral program.

For further information about any of these exemptions, contact the Exemption Department at (425) 388-3540.

For further information about Destroyed Property Claim, contact Appraisal Support at (425) 388-3038.

Q: Is it possible to make a "ballpark estimate" of how much the taxes will be on a piece of property that I am thinking about buying (or a structure that I might build)?

A: Yes. The average 2022 tax rate in Snohomish County is about \$9.30 per \$1,000 of assessed valuation. Rates vary from area to area and from year to year, but multiplying the number of thousands of dollars of price or cost by \$9.30 will provide a rough estimate of taxes. Tax rates ranged from a low of \$5.4711 to a high of \$11.4908 depending on where you live in the county.

Snohomish County Residential Property Physical Inspection Schedule

Total Residential Real Property Parcels in County 262,635.
Real property* is revalued every year and physically inspected as follows:

RESIDENTIAL INSPECTION AREA PARCEL COUNT						
INSPECTION AREA	1	2	3	4	5	6
LAND	6,941	5,352	6,344	4,115	4,470	6,314
RESIDENTIAL	24,893	32,896	40,841	47,321	43,413	38,941
OTHER IMPROVED	139	129	105	153	134	134
TOTAL	31,973	38,377	47,290	51,589	48,017	45,389
RESIDENTIAL INSPECTION YEAR						
LAST	2016	2017	2018	2019	2020	2021
NEXT	2022	2023	2024	2025	2026	2027

2021 ratio as determined by the Washington State Department of Revenue: Real Property Ratio 93.5; Personal Property Ratio 97.8.

*Commercial property inspection areas are different from the residential inspection areas above. Our Commercial Appraisal Division assesses 42,031 parcels. Please contact the Commercial Supervisor at (425) 388-3566 if more detailed information is needed.

LEGAL DESCRIPTION (Additional Legal Description lines may be on file)
 PRIMROSE LANE ADDITION BLK001 D-00 – LOT 54

SENIOR CITIZEN / DISABLED PERSONS EXEMPTION VALUES:

If this property qualifies for a Senior Citizen / Disabled Persons Exemption, property taxes will be based on whichever value is lower, the New Total Market Value or the Senior Citizen / Disabled Persons Exemption Frozen Value.

MARKET VALUE

New Market Value represents the true and fair (market) value of the property as of January 1, 2021. In the instance where new construction has occurred then the assessment date is July 31, 2021 for the new construction improvement value.

CURRENT USE (OPEN SPACE) VALUE

New open space value represents the current use value of the property as of January 1, 2021.

VALUE CHANGE NOTICE INFORMATION

- 1) Taxes payable in 2022 will be based on values established as of January 1, 2021 except for new construction. New construction values are established as of July 31, 2021.
- 2) Both the prior value and new value are based on market value. Please refer to the explanation under the heading of "Market Value".
- 3) Open Space Current Use Values are established for those properties that have applied and qualified for this exemption classification.
- 4) The legal description listed is a description for valuation purposes of the location and boundaries of a specific parcel of land. If the legal description is lengthy, the entire description may not appear on this notice, but is within the records of the Snohomish County Assessor's office.

FOR INQUIRIES REGARDING THIS NOTICE

Please contact the Assessor's Office for answers to any questions you may have regarding your property value prior to petitioning to the Board of Equalization. Public service office hours:

Monday - Friday from 9am – 5pm

E-mail us at: contact.assessor@snoco.org (Please include your name, parcel number, & daytime phone number.)

Our appraisal staff can also be reached at: (425) 388-6555 or Toll-Free (in WA only) @ 1-800-562-4367, ext. 6555. TTY/TDD @ 1-800-833-6388.

Last date to appeal this value: 8/17/2021

Voted vs. Non-voted Taxes Levied in Snohomish County for all Taxing Districts 1986-2022

VOTED vs NON-VOTED AS PERCENT OF TOTAL TAX

Note: Since 1986, non-voted levies have increased by 892 percent, while voted levies have increased by 1,386 percent.

Typical Levy Rates by City and Unincorporated

TYPICAL LEVY RATES BY CITY AND UNINCORPORATED

City	2022 Typical Levy Rate (1)	City	2022 Typical Levy Rate (1)
Arlington	9.3226	Lynnwood	8.9669
Bothell	9.2181	Marysville	10.1031
Brier	8.0816	Mill Creek	8.7489
Darrington	8.5226	Monroe	9.3362
Edmonds	8.2702	Mountlake Terrace	8.6847
Everett	9.1558	Mukilteo	8.3932
Gold Bar	8.6829	Snohomish	10.7812
Granite Falls	9.8306	Stanwood	9.8966
Index	6.8493	Sultan	9.1161
Lake Stevens	9.8328	Woodway	8.1549
Unincorporated	9.4126	(2)	

The above levy rates are expressed as dollars per \$1,000 of assessed taxable value.

To calculate a "ballpark estimate" of how much taxes would be on an assessed taxable value, multiply the number of thousands of assessed taxable value times the levy rate.

If your home's assessed taxable value is \$100,000 divided by 1,000 = 100 x 9.3226 = \$932.26

(1) Rates may vary within cities. The city rate shown is the predominant rate.

(2) The unincorporated rate shown is an average.

Snohomish County Levy Rate Distribution

(1) Residence is based on Department of Revenue Use Codes: 11 (single family units), 14 (residential condominiums), 18 (all other residential not elsewhere coded) and 19 (vacation and cabin).

(2) Rates vary within most cities. The rate shown is the predominant rate. The rates for Unincorporated and County are average rates.

Totals for STATE				\$2.66581696681	\$452,556,374.00	\$0.00	\$452,556,374.00

Total County Value: \$170,299,965,640.00

Total County Tax: \$1,584,079,035.91

Average County Tax: \$9.3017

*Total County Tax includes all taxing districts regular levies, excess levies and timber tax. This amount differs from the tax totals shown on pages 23 and 26 which do not include timber tax. Timber tax is an excise tax collected by the state separate from property tax with a portion distributed to the taxing districts.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

TAX CODE AREAS & RATES FOR TAX YEAR 2022

"TCA's" (Tax Code Areas) designate a unique set of taxing districts. They appear on tax statements. These columns list the Tax Code Area, district/levy, and regular and excess levy rates within that TCA. All rates are expressed in dollars per thousand dollars of assessed value. Totals are accurate, but may not agree to sum of detail because of rounding.

Appendix C	Impact Fee Calculations

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

Arlington Public Schools (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the City of Arlington (the “City”) with a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, the Snohomish County Ordinance Nos. 97-095 and 99-107, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- District should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. The information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.
- The methodology used to calculate impact fees complies with the criteria and the formulas established by the County and the City.

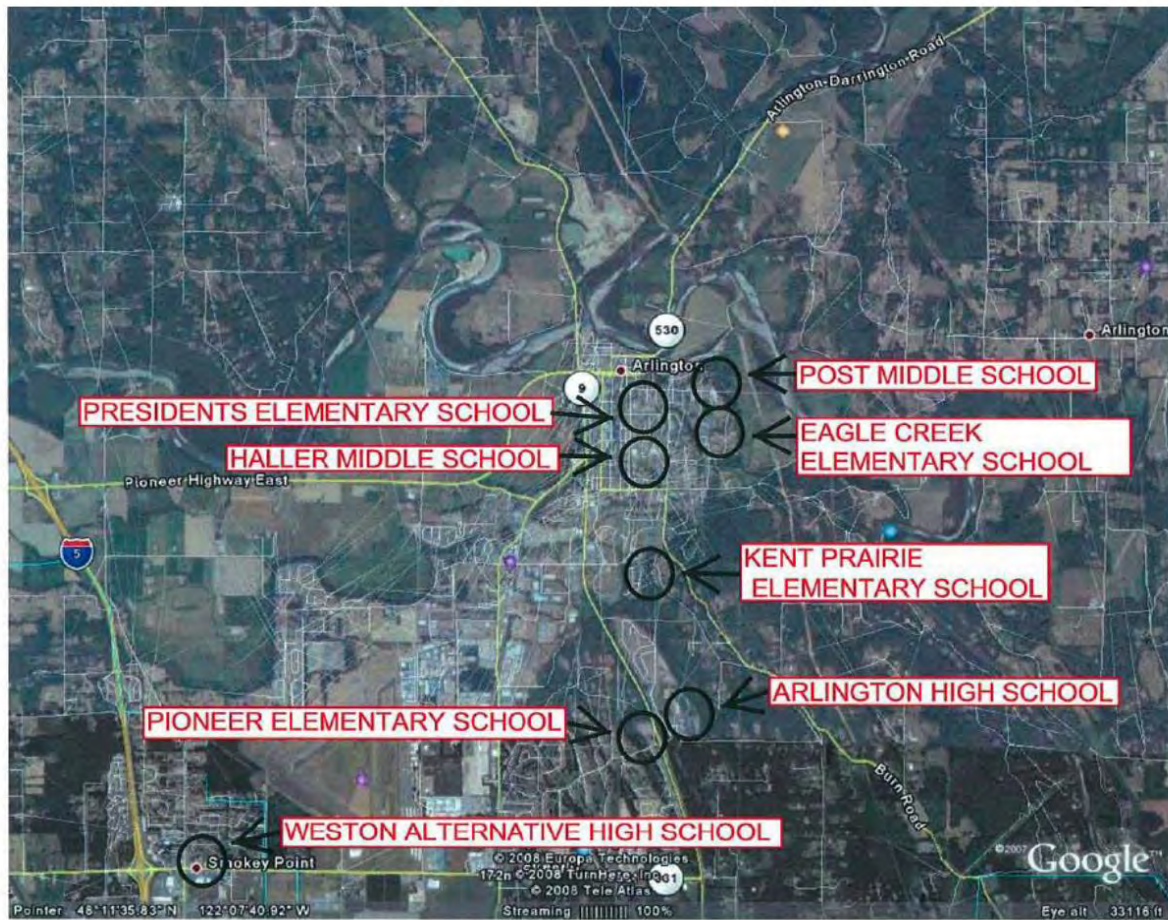

Snohomish County’s Countywide Planning Policies direct jurisdictions in Snohomish County to “ensure the availability of sufficient land and services for future K-20 school needs.” Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of Arlington Public Schools

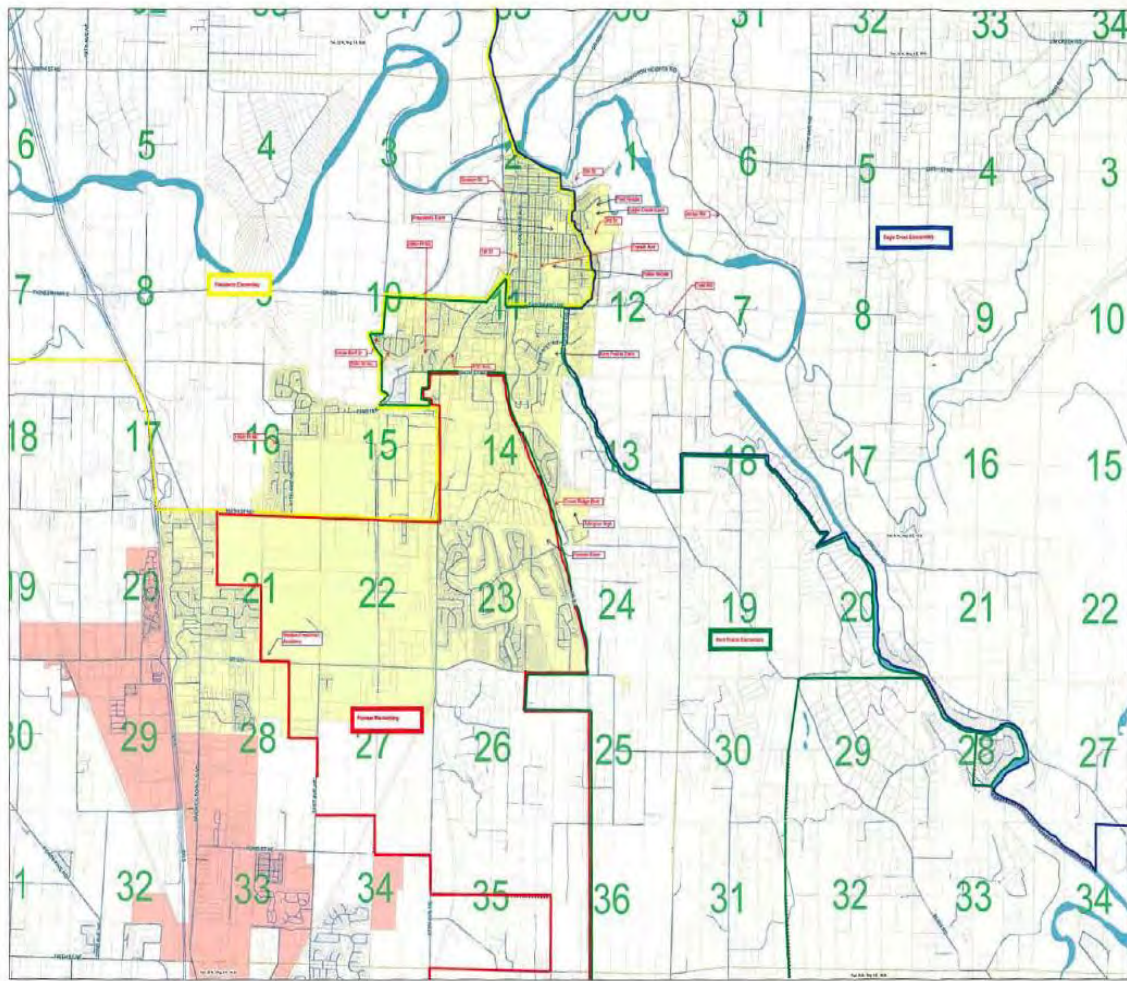

Two-hundred square miles in area, the District encompasses the City of Arlington and portions of unincorporated Snohomish County. The District is bordered by the Conway, Darrington, Granite Falls, Lakewood, Marysville, Sedro-Woolley, and Stanwood-Camano School Districts.

The District serves a student population of 5,374 (October 1, 2021 HC enrollment) with four elementary schools (K-5), two middle schools (grades 6-8), one high school (grades 9-12), one alternative high school (grades 9-12), and one support facility for home schooled children (grades K-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Stillaguamish Valley School (a home school support facility serving grades K-12), the alternative high school (Weston), and the Arlington Online Program (AOP) is not included.

The District has experienced moderate growth in recent years after a period of declining student population. For a period of years (2012-2015) the District, due to the declining student population, did not prepare an updated Capital Facilities Plan. The District prepared a CFP in 2016 in anticipation of potential growth, enrollment increases, and future capacity needs. Growth has been steady in the District since 2016 and is projected to continue to increase at all grade levels over the six year planning period. Similar to school districts nationwide, the COVID-19 pandemic affected student enrollment. The District saw a drop in enrollment starting in the 2020-21 school year and continuing into the fall of 2021, most notably at the K-5 level, as families considered alternative education opportunities during the pandemic. With the return to in-person learning, the District anticipates that enrollment will return to pre-pandemic projections and continue to grow over the six-year planning period. This 2022 update builds on the 2020 CFP and identifies a growth-related projects at the middle school level and anticipates the completion of an addition at the high school in the summer of 2022.

Arlington School District # 16

2

SECTION 2

DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables).

In addition to student population, other factors such as collective bargaining agreements, government mandates, and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music programs. These programs can have a significant impact on the available student capacity of school facilities.

A. Districtwide Educational Program Standards

Special programs offered by the District at specific school sites include, but are not limited to:

- APPLE (formerly named ECEAP);
- Elementary program for students with special needs; and
- Enhanced Learning Program/Highly Capable; and
- English Language Learner Program (Eagle Creek Elementary).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates or needs for special programs, or use of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels. Each grade span has a targeted level of service (LOS) which is expressed as a "not to exceed" number. The minimum LOS for each grade span is expressed as "maximum average class size". This figure is used to determine when another class is added. When this average is exceeded, the District will add additional classes if space is available. Only academic classes are used to compute the maximum average class size.

The District has fully implemented full-day kindergarten in and reduced K-3 class size requirements.

B. Educational Program Standards for Elementary Schools

- Class size for Kindergarten and grades 1-3 is targeted not to exceed 21 students, with a maximum average class size of 21 students;
- Class size for grade 4 is targeted not to exceed 25 students, with a maximum average class size of 27 students;
- Class size for grade 5 is targeted not to exceed 27 students, with a maximum average class size of 29 students;
- Special Education for some students is provided in a self-contained classroom;
- Music instruction will be provided in a separate classroom (when available); and
- All elementary schools currently have a room dedicated as a computer lab, or have access to mobile carts with laptop computers for classroom use.

C. Educational Program Standards for Middle and High Schools

- Class size for grade 6 is targeted not to exceed 27 students, with a maximum average class size of 29 students
- Class size for middle school grades 7-8 is targeted not to exceed 29 students, with a maximum average class size of 31 students;
- Class size for high school grades 9-12 is targeted not to exceed 30 students, with a maximum average class size of 32 students;
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, high school classroom capacity has been adjusted using a utilization factor in the range of 90% to 96% (based on a regular school day). Middle school classroom capacity has been adjusted using a utilization factor of 85%;
- Special Education for some students will be provided in a self-contained classroom; and
- Identified students will also be provided other programs in classrooms designated as follows:
 1. Resource Rooms (i.e. computer labs, study rooms).
 2. Learning Support Centers.
 3. Program Specific Classrooms (i.e., music, drama, art, home and family education).

D. Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole, while meeting the District's paramount duties under the State Constitution. A boundary change or a significant programmatic change would be made by the District's Board of Directors following appropriate public review and comment. The District

may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's intent is to adhere to the target facility service standards noted above without making significant changes in program delivery. At a minimum, average class size in the grade K-8 classrooms will not exceed 26 students and average class size in 9-12 classrooms will not exceed 32 students. For purposes of this determination, the term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education, and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom or to classes held in assembly halls, gyms, cafeterias, or other common areas.

The minimum educational service standards are not the District's desired or accepted operating standard.

For the school years of 2019-20 and 2020-21, the District's compliance with the minimum level of service was as follows

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	22.48	26	20.04	32	33.68

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations.

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	20.06	26	19.19	32	32.19

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations. Portables are not included in this analysis.

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See Section 2.* A map showing locations of District facilities is provided as Figure 1.

A. Schools

The District maintains four elementary schools, two middle schools, one high school, an alternative high school, and the Stillaguamish Valley School (a Home-School Support center). Elementary schools currently accommodate grades K-5, the middle schools serve grades 6-8, and the high school and alternative high school provide for grades 9-12. The Stillaguamish Valley School serves grades K-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Tables 1, 2, and 3.

The Stillaguamish Valley School and Weston High School are housed in separate District-owned facilities and are not included in this CFP for the purposes of measuring capacity or projecting enrollment. Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Tables 1, 2, and 3.

**Table 1
Elementary School Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Eagle Creek	23.70	57,362	28	630	1989
Kent Prairie	10.10	57,362	28	630	1993
Presidents	12.40	60,977	31	680	2004
Pioneer	20.60	61,530	25	562	2002
TOTAL	66.80	237,231	112	2,502	

Table 2
Middle School Inventory

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations*	Permanent Capacity	Year Built or Remodeled
Post Middle	24.60	76,323	36	757	1993
Haller Middle	25.46	86,002	31	612	2006
TOTAL	50.06	162,325	67	1,369	

*Includes a total of six special education classrooms between both schools.

Table 3
High School Inventory

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Arlington High	54.00	256,181	53	1,780	2003; 2022

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses thirteen relocatable classrooms at various school sites throughout the District to provide additional interim capacity (an additional 10 relocatables are located at Stillaguamish Valley School). A typical relocatable classroom can provide capacity for a full-size class of students. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly. Current use for the 2022-19 school year of relocatable classrooms throughout the District is summarized in Table 4.

Table 4
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatables	Interim Capacity
Eagle Creek	2	58
Kent Prairie	4	84
Presidents	2	58
Middle School	Relocatables	Interim Capacity
Post Middle	4	113
High School	Relocatables	Interim Capacity
Arlington High	1	32
TOTAL	13	345

C. Support Facilities

In addition to schools, the District owns and operates additional facilities, which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5
Support Facility Inventory

Facility	Building Area (Square Feet)	Site Location	Address
Administration and Special Programs	21,402	Roosevelt Building, Presidents	315 N. French Ave
Transportation	41,550	Leased	19124 63 rd Ave Ne
Support Services	70,991	Old HS “A” Bldg	135 S. French Ave

D. Land Inventory & Other Facilities

The District owns the following undeveloped sites:

- A 167-acre site (“Hwy 530 Site”) located 1.5 miles from the city limits of Arlington adjacent to SR 530. The property is outside of the Urban Growth Area boundary and not serviced by municipal utilities. The District is currently negotiating a sale of this property.
- Seven sites ranging from 25 to 160 acres that are managed as forest land by a forestland manager and generally topographically unsuitable for school site development.
- An additional 58.9 acres at the Post Middle School site of farmland located in a floodplain and therefore unsuitable for development.

The District owns the “A” Building on the former high school campus. The “A” Building has been taken out of educational use and is no longer eligible (by OSPI) for use as for classroom space.

The Stillaguamish Valley School, which supports home-schooled students, is located on the Eagle Creek Elementary site. This facility consists of 10 portable classrooms and is not considered part of the District’s permanent facility capacity.

Additionally, the District leases a 33,000 square foot building on a 10 acre site near the Arlington Airport. This remodeled building houses the (alternative) Weston High School. Since this site houses only alternative educational programs, the building’s capacity is not included as part of the District’s eligible facility inventory¹.

¹ Students enrolled in these alternative programs are not included in enrollment numbers for the purposes of this CFP update.

SECTION 4 STUDENT ENROLLMENT PROJECTIONS

A. Projected Student Enrollment 2022-2027

Enrollment projections are most accurate for the initial years of the forecast period. In the past, the District has used the methodology from the Office of Superintendent of Public Instruction (OSPI) to determine enrollment projections. The cohort survival method uses historical enrollment data to forecast the number of students who will be attending school the following year. The cohort method has not proven to be a reliable measure for the Arlington School District. It uses a weighted average of the most recent years to project enrollment and is not designed to anticipate fluctuations in development patterns or isolated variances in student enrollment. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in 2020. For information purposes only, the OSPI cohort survival projections are included in Appendix A-1.

The District has worked with an outside demographer, FLO Analytics, to obtain enrollment projections that consider historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-2. Using the District's enrollment projections, the District anticipates an increase in enrollment increase of approximately 14.5% by the 2027-28 school year, with growth occurring at all grade levels.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts as adopted by Snohomish County. Between 2014 and 2019, the District's enrollment constituted 17.2% of the total population in the District. In 2020, the District's enrollment constituted 15.60% of the total population in the District. The District is choosing to rely on the assumption that District enrollment will follow the 2014-2019 pattern of 17.2%. Using this percentage, a total enrollment of 6,450 HC students is projected in 2027.

**Table 6
Projected Student Enrollment
2021-2027**

								Change	% Change
Projection	2021*	2022	2023	2024	2025	2026	2027	21-27	21-27
District	5,374	5,545	5,678	5,861	5,927	6,039	6,135	779	14.5%
OFM/County	5,374	5,553	5,732	5,911	6,090	6,269	6,450	1,076	20.02%

* Actual October 2021 HC enrollment

The District uses the adjusted District demographer's enrollment projections for purposes of predicting enrollment during the six years of this Plan. The District will monitor actual enrollment over the next two years and, if necessary, make appropriate adjustments in the next Plan update.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Based on OFM/County data for 2027 and an estimated student-to-population ratio of 17.2%, 8,084 HC students are projected for 2044. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle, and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle school, and high school levels.

Projected enrollment by grade span for the year 2044² is provided in Table 7. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 7
Projected Student Enrollment
(Ratio Method – OFM/County)
2044

Grade Span	Projected Enrollment
Elementary (K-5)	3,408
Middle School (6-8)	1,943
High School (9-12)	2,733
TOTAL (K-12)	8,084

² Snohomish County Planning & Development Services provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

Projected available student capacity was derived by subtracting projected student enrollment from existing school capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). Capacity needs are expressed in terms of “unhoused students.” Note that the identified capacity needs do not include growth-related capacity needs from recent development.

Table 8A below shows future capacity needs assuming no new construction during the planning period.

**Table 8A
Future Capacity Needs**

Grade Span	2027 Projected Unhoused Students - Total	2027 Projected Unhoused Students – Growth Post-2021
Elementary (K-5)	286	286
Middle School (6-8)	37	37
High School (9-12)	37	142
TOTAL (K-12)	360	465

Projected student capacity is depicted on Table 8B. This is derived by applying the projected number of students to the projected capacity. Planned improvements (if any) by the District through 2027 are included in Table 8B. It is not the District’s policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms (including additions and adjustments) is not included. Information on relocatable classrooms and interim capacity can be found in Table 4. Information on planned construction projects can be found in Section 6 and the Financing Plan, Table 9.

Table 8B
Projected Student Capacity
2022 - 2027

^Arlington High School Addition (complete summer 2022)

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

The District has identified several capacity projects within the six year planning period needed to meet growth-related needs:

Permanent Capacity Adding Projects:

- Replacement of Post Middle School with the addition of 150 new student seats.
- Expansion of Arlington High School would add 256 additional student seats (anticipated to be complete in summer 2022, with remaining available capacity anticipated during the six-year planning period).

Temporary Capacity Projects:

- The District plans to add portable facilities at the elementary level and potentially at other levels during the six year planning period of this CFP.

Property Acquisition:

- The District plans to acquire land for an elementary school site.

The District is also starting to plan for elementary capacity solutions as growth continues at that grade level. Future updates to the CFP will include any specifically planned projects.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, state school construction assistance program funds, and impact fees. Each of these funding sources is discussed in greater detail below.

B. Financing Sources

1. General Obligation Bonds/Capital Levies

Bonds are typically used to fund construction of new schools and other capital improvement projects, and require a 60% voter approval. Capital levies require a 50% voter approval and can be used for certain capital improvement projects. In February 2020, the District presented a \$25.1 million capital levy and \$107.5 million bond measure to its voters. The voters approved the capital levy, which includes, among other things, funding for the new classrooms and a science, technology, engineering, art and math (STEAM) workshop wing addition at Arlington High School. The bond proposal included funding for the construction of a new middle school to replace Post Middle School. The bond did not achieve the required 60% minimum for passage. Subject to future Board action, the District anticipates presenting a bond proposal to the voters in 2024, which would include the replacement/expansion of Post Middle School.

2. State School Construction Assistance Funds

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is currently eligible for state school construction assistance funds at the 61.26% level for eligible projects.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development.

C. Six-Year Financing Plan

Table 9 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include capital levy funds, future bond revenue, impact fees, and other future sources. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 9
Capital Facilities Financing Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/Other Local	State Match	Impact Fees
Elementary										
Potential Property Purchase							TBD	X		X

Various Schools (all grade levels)										
Security improvements; pedestrian safety improvements; energy efficiency measures; miscellaneous improvements	\$17.117*							X		

*Project complete summer 2022; funds reflect total costs with some funds expended in previous years.

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County and the City of Arlington’s impact fee programs require school districts to prepare and adopt CFPs meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development.

A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student methodology is contained in Appendix B. The District obtained for the first time a data set for multi-family dwelling units of one bedroom and less. However, the low rate of students residing in these units does not generate an impact fee.

As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 8-A. For purposes of this Plan, the District has chosen to use the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 9 for a complete identification of funding sources.

The following projects are included in the impact fee calculation:

- A capacity addition at Arlington High School.
- A capacity addition at the replacement Post Middle School

Please see Table 11 for relevant cost data related to each capacity project.

C. Proposed Arlington School District Impact Fee Schedule

Using the variables and formula described in subsection B, impact fees proposed for the District are summarized in Table 10. See also Appendix C.

Table 10
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$4,002
Multi-Family (1 Bedroom)	No fee (\$0)
Multi-Family (2+ Bedroom)	\$2,328

Table 10 reflects a 50% adjustment to the calculated fee as required by local ordinances.

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: Brian Lewis
Executive Director of Operations
Arlington Public Schools

Date: March 18, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F2116.01.002

Re: **Student Generation Report—Arlington Public Schools**

At the request of the Arlington Public Schools (District/APS), FLO Analytics (FLO) has prepared an analysis of student generation rates (SGRs) resulting from recent (2017 to 2021) residential construction within the district. This document details the methodology FLO used to create the SGRs for APS; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF housing, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of two mobile home sites that have been present since at least 2010 and a large MF site that was not completed prior to the end of 2021 (Pilchuck Village). The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 636 SF units and five MF buildings completed between 2017 and 2021. While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (528 units), a variety of units with other SF use codes were also constructed, including duplexes, condominiums, manufactured homes (owned and leased), and approximately 150 units in a mobile home park. While less active than SF construction, MF construction resulted in 456 new units. About 64 percent (293 units) of these new MF units were 2+ BR units, while the remainder (163 units) were 0–1 BR units.

Project No. F2116.01.002
Page 2

All students (grades kindergarten [K] through 12) in the October 18, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 636 SF units were compared with the 5,374 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	26	0.041
1	18	0.028
2	28	0.044
3	21	0.033
4	15	0.024
5	23	0.036
6	18	0.028
7	24	0.038
8	20	0.031
9	21	0.033
10	17	0.027
11	15	0.024
12	16	0.025
K-5	108	0.206
6-8	65	0.097
9-12	73	0.108
K-12	246	0.412

*Calculated rates for grade level groups may not equal the sum of individual grade rates due to rounding.

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Brian Lewis
March 18, 2022

Project No. F2116.01.002
Page 3

FLO reached out to the building management at the five projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Park 77, Emory Lofts A and B, and Centennial Park. Bedroom counts were ascertained for seven townhouse units (all are 2+ BR) located on the north side of the city along W Burke Avenue; however, no students reside within these units.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR multifamily units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 163 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

K–5	3	0.018
6–8	0	0.000
9–12	0	0.000
K–12	3	0.018

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 293 2+ BR units in total were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

Arlington Public Schools (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the City of Arlington (the “City”) with a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, the Snohomish County Ordinance Nos. 97-095 and 99-107, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- District should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. The information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.
- The methodology used to calculate impact fees complies with the criteria and the formulas established by the County and the City.

Snohomish County’s Countywide Planning Policies direct jurisdictions in Snohomish County to “ensure the availability of sufficient land and services for future K-20 school needs.” Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of Arlington Public Schools

Two-hundred square miles in area, the District encompasses the City of Arlington and portions of unincorporated Snohomish County. The District is bordered by the Conway, Darrington, Granite Falls, Lakewood, Marysville, Sedro-Woolley, and Stanwood-Camano School Districts.

The District serves a student population of 5,374 (October 1, 2021 HC enrollment) with four elementary schools (K-5), two middle schools (grades 6-8), one high school (grades 9-12), one alternative high school (grades 9-12), and one support facility for home schooled children (grades K-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Stillaguamish Valley School (a home school support facility serving grades K-12), the alternative high school (Weston), and the Arlington Online Program (AOP) is not included.

The District has experienced moderate growth in recent years after a period of declining student population. For a period of years (2012-2015) the District, due to the declining student population, did not prepare an updated Capital Facilities Plan. The District prepared a CFP in 2016 in anticipation of potential growth, enrollment increases, and future capacity needs. Growth has been steady in the District since 2016 and is projected to continue to increase at all grade levels over the six year planning period. Similar to school districts nationwide, the COVID-19 pandemic affected student enrollment. The District saw a drop in enrollment starting in the 2020-21 school year and continuing into the fall of 2021, most notably at the K-5 level, as families considered alternative education opportunities during the pandemic. With the return to in-person learning, the District anticipates that enrollment will return to pre-pandemic projections and continue to grow over the six-year planning period. This 2022 update builds on the 2020 CFP and identifies a growth-related projects at the middle school level and anticipates the completion of an addition at the high school in the summer of 2022.

**FIGURE 1
MAP OF FACILITIES**

ARLINGTON SCHOOL DISTRICT #16 FACILITIES MAP

SECTION 2 DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District’s adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables).

In addition to student population, other factors such as collective bargaining agreements, government mandates, and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music programs. These programs can have a significant impact on the available student capacity of school facilities.

A. Districtwide Educational Program Standards

Special programs offered by the District at specific school sites include, but are not limited to:

- APPLE (formerly named ECEAP);
- Elementary program for handicapped students; and
- Enhanced Learning Program/Highly Capable; and
- English Language Learner Program (Eagle Creek Elementary).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates or needs for special programs, or use of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels. Each grade span has a targeted level of service (LOS) which is expressed as a “not to exceed” number. The minimum LOS for each grade span is expressed as “maximum average class size”. This figure is used to determine when another class is added. When this average is exceeded, the District will add additional classes if space is available. Only academic classes are used to compute the maximum average class size.

The District has fully implemented full-day kindergarten in and reduced K-3 class size requirements.

B. Educational Program Standards for Elementary Schools

- Class size for Kindergarten and grades 1-3 is targeted not to exceed 21 students, with a maximum average class size of 21 students;
- Class size for grade 4 is targeted not to exceed 25 students, with a maximum average class size of 27 students;
- Class size for grade 5 is targeted not to exceed 27 students, with a maximum average class size of 29 students;
- Special Education for some students is provided in a self-contained classroom;
- Music instruction will be provided in a separate classroom (when available); and
- All elementary schools currently have a room dedicated as a computer lab, or have access to mobile carts with laptop computers for classroom use.

C. Educational Program Standards for Middle and High Schools

- Class size for grade 6 is targeted **not to exceed 27 students**, with a maximum average class size of 29 students
- Class size for middle school grades 7-8 is targeted **not to exceed 29 students**, with a maximum average class size of 31 students;
- Class size for high school grades 9-12 is targeted **not to exceed 30 students**, with a maximum average class size of 32 students;
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, high school classroom capacity has been adjusted using a utilization factor in the range of 90% to 96% (based on a regular school day). Middle school classroom capacity has been adjusted using a utilization factor of 85%;
- Special Education for some students will be provided in a self-contained classroom; and
- Identified students will also be provided other programs in classrooms designated as follows:
 1. Resource Rooms (i.e. computer labs, study rooms).
 2. Learning Support Centers.
 3. Program Specific Classrooms (i.e., music, drama, art, home and family education).

D. Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole, while meeting the District's paramount duties under the State Constitution. A boundary change or a significant programmatic change would be made by the District's Board of Directors following appropriate public review and comment. The District

may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's intent is to adhere to the target facility service standards noted above without making significant changes in program delivery. At a minimum, average class size in the grade K-8 classrooms will not exceed 26 students and average class size in 9-12 classrooms will not exceed 32 students. For purposes of this determination, the term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education, and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom or to classes held in assembly halls, gyms, cafeterias, or other common areas.

The minimum educational service standards are not the District's desired or accepted operating standard.

For the school years of 2019-20 and 2020-21, the District's compliance with the minimum level of service was as follows

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	22.48	26	20.04	32	33.68

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations.

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	20.06	26	19.19	32	32.19

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations. Portables are not included in this analysis.

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See Section 2.* A map showing locations of District facilities is provided as Figure 1.

A. *Schools*

The District maintains four elementary schools, two middle schools, one high school, an alternative high school, and the Stillaguamish Valley School (a Home-School Support center). Elementary schools currently accommodate grades K-5, the middle schools serve grades 6-8, and the high school and alternative high school provide for grades 9-12. The Stillaguamish Valley School serves grades K-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Tables 1, 2, and 3.

The Stillaguamish Valley School and Weston High School are housed in separate District-owned facilities and are not included in this CFP for the purposes of measuring capacity or projecting enrollment. Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Tables 1, 2, and 3.

**Table 1
Elementary School Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Eagle Creek	23.70	57,362	28	630	1989
Kent Prairie	10.10	57,362	28	630	1993
Presidents	12.40	60,977	31	680	2004
Pioneer	20.60	61,530	25	562	2002
TOTAL	66.62	237,231	112	2,502	

Table 2
Middle School Inventory

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations*	Permanent Capacity	Year Built or Remodeled
Post Middle	24.60	76,323	36	757	1993
Haller Middle	25.46	86,002	31	612	2006
TOTAL	50.06	162,325	67	1,369	

*Includes a total of six special education classrooms between both schools.

Table 3
High School Inventory

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Arlington High	54.00	256,181	53	1,780	2003; 2022

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses eleven relocatable classrooms at various school sites throughout the District to provide additional interim capacity (an additional 10 relocatables are located at Stillaguamish Valley School). A typical relocatable classroom can provide capacity for a full-size class of students. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly. Current use for the 2022-19 school year of relocatable classrooms throughout the District is summarized in Table 4.

Table 4
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatables	Interim Capacity
Eagle Creek	2	58
Kent Prairie	4	84
Presidents	2	58
Middle School	Relocatables	Interim Capacity
Post Middle	4	113
High School	Relocatables	Interim Capacity
Arlington High	1	32
TOTAL	13	345

C. *Support Facilities*

In addition to schools, the District owns and operates additional facilities, which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5
Support Facility Inventory

Facility	Building Area (Square Feet)	Site Location
Administration and Special Programs	21,402	Roosevelt Building, Presidents
Transportation	41,550	Leased
Support Services	70,991	Old HS “A” Bldg

D. *Land Inventory & Other Facilities*

The District owns the following undeveloped sites:

- A 167-acre site (“Hwy 530 Site”) located 1.5 miles from the city limits of Arlington adjacent to SR 530. The property is outside of the Urban Growth Area boundary and not serviced by municipal utilities. The District is currently negotiating a sale of this property.
- Seven sites ranging from 25 to 160 acres that are managed as forest land by a forestland manager and generally topographically unsuitable for school site development.
- An additional 58.9 acres at the Post Middle School site of farmland located in a floodplain and therefore unsuitable for development.

The District owns the “A” Building on the former high school campus. The “A” Building has been taken out of educational use and is no longer eligible (by OSPI) for use as for classroom space.

The Stillaguamish Valley School, which supports home-schooled students, is located on the Eagle Creek Elementary site. This facility consists of 10 portable classrooms and is not considered part of the District’s permanent facility capacity.

Additionally, the District leases a 33,000 square foot building on a 10 acre site near the Arlington Airport. This remodeled building houses the (alternative) Weston High School. Since this site houses only alternative educational programs, the building’s capacity is not included as part of the District’s eligible facility inventory¹.

¹ Students enrolled in these alternative programs are not included in enrollment numbers for the purposes of this CFP update.

SECTION 4

STUDENT ENROLLMENT PROJECTIONS

A. *Projected Student Enrollment 2022-2027*

Enrollment projections are most accurate for the initial years of the forecast period. In the past, the District has used the methodology from the Office of Superintendent of Public Instruction (OSPI) to determine enrollment projections. The cohort survival method uses historical enrollment data to forecast the number of students who will be attending school the following year. The cohort method has not proven to be a reliable measure for the Lakewood School District. It uses a weighted average of the most recent years to project enrollment and is not designed to anticipate fluctuations in development patterns or isolated variances in student enrollment. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in 2020. For information purposes only, the OSPI cohort survival projections are included in Appendix A-1.

The District has worked with an outside demographer, **FLO Analytics**, to obtain enrollment projections that consider historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-2. Using the District's enrollment projections, the District anticipates an increase in enrollment increase of approximately **14.5% by the 2027-28 school year**, with growth occurring at all grade levels.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts as adopted by Snohomish County. Between 2014 and 2019, the District's enrollment constituted 17.2% of the total population in the District. In 2020, the District's enrollment constituted 15.60% of the total population in the District. The District is choosing to rely on the assumption that District enrollment will follow the 2014-2019 pattern of 17.2%. Using this percentage, a total enrollment of 6,450 HC students is projected in 2027. *See Appendix A.*

Table 6
Projected Student Enrollment
2021-2027

								Change	% Change
Projection	2021*	2022	2023	2024	2025	2026	2027	21-27	21-27
District	5,374	5,545	5,678	5,861	5,927	6,039	6,135	779	14.5%
OFM/County	5,374	5,553	5,732	5,911	6,090	6,269	6,450	1,076	20.02%

* Actual October 2021 HC enrollment

The District uses the adjusted District demographer's enrollment projections for purposes of predicting enrollment during the six years of this Plan. The District will monitor actual enrollment over the next two years and, if necessary, make appropriate adjustments in the next Plan update.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Based on OFM/County data for 2027 and an estimated student-to-population ratio of 17.2%, 8,084 HC students are projected for 2044. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle, and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle school, and high school levels.

Projected enrollment by grade span for the year 2044² is provided in Table 7. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 7
Projected Student Enrollment
(Ratio Method – OFM/County)
2044

Grade Span	Projected Enrollment
Elementary (K-5)	3,408
Middle School (6-8)	1,943
High School (9-12)	2,733
TOTAL (K-12)	8,084

² Snohomish County Planning & Development Services provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

Projected available student capacity was derived by subtracting projected student enrollment from existing school capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). Capacity needs are expressed in terms of “unhoused students.” Note that the identified capacity needs do not include growth-related capacity needs from recent development.

Table 8A below shows future capacity needs assuming no new construction during the planning period.

**Table 8A
Future Capacity Needs**

Grade Span	2027 Projected Unhoused Students - Total	2027 Projected Unhoused Students – Growth Post-2021
Elementary (K-5)	286	286
Middle School (6-8)	37	37
High School (9-12)	37	142
TOTAL (K-12)	360	465

Projected student capacity is depicted on Table 8B. This is derived by applying the projected number of students to the projected capacity. Planned improvements (if any) by the District through 2027 are included in Table 8B. It is not the District’s policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms (including additions and adjustments) is not included. Information on relocatable classrooms and interim capacity can be found in Table 4. Information on planned construction projects can be found in Section 6 and the Financing Plan, Table 9.

Table 8B
Projected Student Capacity
2022 - 2027

Elementary School Surplus/Deficiency

^Arlington High School Addition (complete summer 2022)

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

The District has identified several capacity projects within the six year planning period needed to meet growth-related needs:

Permanent Capacity Adding Projects:

- Replacement of Post Middle School with the addition of 150 new student seats.
- Expansion of Arlington High School would add 256 additional student seats (anticipated to be complete in summer 2022, with remaining available capacity anticipated during the six-year planning period).

Temporary Capacity Projects:

- The District plans to add portable facilities at the elementary level and potentially at other levels during the six year planning period of this CFP.

Property Acquisition:

- The District plans to acquire land for an elementary school site.

The District is also starting to plan for elementary capacity solutions as growth continues at that grade level. Future updates to the CFP will include any specifically planned projects.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, state school construction assistance program funds, and impact fees. Each of these funding sources is discussed in greater detail below.

B. Financing Sources

1. General Obligation Bonds/Capital Levies

Bonds are typically used to fund construction of new schools and other capital improvement projects, and require a 60% voter approval. Capital levies require a 50% voter approval and can be used for certain capital improvement projects. In February 2020, the District presented a \$25.1 million capital levy and \$107.5 million bond measure to its voters. The voters approved the capital levy, which includes, among other things, funding for the new classrooms and a science, technology, engineering, art and math (STEAM) workshop wing addition at Arlington High School. The bond proposal included funding for the construction of a new middle school to replace Post Middle School. The bond did not achieve the required 60% minimum for passage. Subject to future Board action, the District anticipates presenting a bond proposal to the voters in 2024, which would include the replacement/expansion of Post Middle School.

2. State School Construction Assistance Funds

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is currently eligible for state school construction assistance funds at the 61.26% level for eligible projects.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development.

C. Six-Year Financing Plan

Table 9 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include capital levy funds, future bond revenue, impact fees, and other future sources. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 9
Capital Facilities Financing Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/Other Local	State Match	Impact Fees
Elementary										
Potential Property Purchase							TBD	X		X

Various Schools (all grade levels)										
Security improvements; pedestrian safety improvements; energy efficiency measures; miscellaneous improvements	\$17.117*							X		

*Project complete summer 2022; funds reflect total costs with some funds expended in previous years.

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County and the City of Arlington’s impact fee programs require school districts to prepare and adopt CFPs meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development.

A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student methodology is contained in Appendix B. The District obtained for the first time a data set for multi-family dwelling units of one bedroom and less. However, the low rate of students residing in these units does not generate an impact fee.

As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 8-A. For purposes of this Plan, the District has chosen to use the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 9 for a complete identification of funding sources.

The following projects are included in the impact fee calculation:

- A capacity addition at Arlington High School.
- A capacity addition at the replacement Post Middle School

Please see Table 11 for relevant cost data related to each capacity project.

C. Proposed Arlington School District Impact Fee Schedule

Using the variables and formula described in subsection B, impact fees proposed for the District are summarized in Table 10. See also Appendix C.

Table 10
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$4,002
Multi-Family (1 Bedroom)	No fee (\$0)
Multi-Family (2+ Bedroom)	\$2,328

Table 10 reflects a 50% adjustment to the calculated fee as required by local ordinances.

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: Brian Lewis
 Executive Director of Operations
 Arlington Public Schools

Date: March 18, 2022

From: Tyler Vick
 Managing Director
 Benjamin Maloney
 Demographer/Data Analyst

Project No.: F2116.01.002

Re: **Student Generation Report—Arlington Public Schools**

At the request of the Arlington Public Schools (District/APS), FLO Analytics (FLO) has prepared an analysis of student generation rates (SGRs) resulting from recent (2017 to 2021) residential construction within the district. This document details the methodology FLO used to create the SGRs for APS; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF housing, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor’s Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of two mobile home sites that have been present since at least 2010 and a large MF site that was not completed prior to the end of 2021 (Pilchuck Village). The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 636 SF units and five MF buildings completed between 2017 and 2021. While the majority of the SF construction consisted of units classified as “Single Family Residence – Detached” (528 units), a variety of units with other SF use codes were also constructed, including duplexes, condominiums, manufactured homes (owned and leased), and approximately 150 units in a mobile home park. While less active than SF construction, MF construction resulted in 456 new units. About 64 percent (293 units) of these new MF units were 2+ BR units, while the remainder (163 units) were 0–1 BR units.

Project No. F2116.01.002
Page 2

All students (grades kindergarten [K] through 12) in the October 18, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 636 SF units were compared with the 5,374 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	26	0.041
1	18	0.028
2	28	0.044
3	21	0.033
4	15	0.024
5	23	0.036
6	18	0.028
7	24	0.038
8	20	0.031
9	21	0.033
10	17	0.027
11	15	0.024
12	16	0.025
K-5	108	0.206
6-8	65	0.097
9-12	73	0.108
K-12	246	0.412

*Calculated rates for grade level groups may not equal the sum of individual grade rates due to rounding.

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Brian Lewis
March 18, 2022

Project No. F2116.01.002
Page 3

FLO reached out to the building management at the five projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Park 77, Emory Lofts A and B, and Centennial Park. Bedroom counts were ascertained for seven townhouse units (all are 2+ BR) located on the north side of the city along W Burke Avenue; however, no students reside within these units.

Multifamily 0-1 BR Rates

FLO calculated the MF 0-1 BR SGRs by comparing data on 0-1 BR multifamily units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 163 0-1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0-1 BR Units

K-5	3	0.018
6-8	0	0.000
9-12	0	0.000
K-12	3	0.018

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 293 2+ BR units in total were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

Arlington Public Schools (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the City of Arlington (the “City”) with a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, the Snohomish County Ordinance Nos. 97-095 and 99-107, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- District should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. The information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.
- The methodology used to calculate impact fees complies with the criteria and the formulas established by the County and the City.

Snohomish County’s Countywide Planning Policies direct jurisdictions in Snohomish County to “ensure the availability of sufficient land and services for future K-20 school needs.” Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of Arlington Public Schools

Two-hundred square miles in area, the District encompasses the City of Arlington and portions of unincorporated Snohomish County. The District is bordered by the Conway, Darrington, Granite Falls, Lakewood, Marysville, Sedro-Woolley, and Stanwood-Camano School Districts.

The District serves a student population of 5,374 (October 1, 2021 HC enrollment) with four elementary schools (K-5), two middle schools (grades 6-8), one high school (grades 9-12), one alternative high school (grades 9-12), and one support facility for home schooled children (grades K-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Stillaguamish Valley School (a home school support facility serving grades K-12), the alternative high school (Weston), and the Arlington Online Program (AOP) is not included.

The District has experienced moderate growth in recent years after a period of declining student population. For a period of years (2012-2015) the District, due to the declining student population, did not prepare an updated Capital Facilities Plan. The District prepared a CFP in 2016 in anticipation of potential growth, enrollment increases, and future capacity needs. Growth has been steady in the District since 2016 and is projected to continue to increase at all grade levels over the six year planning period. Similar to school districts nationwide, the COVID-19 pandemic affected student enrollment. The District saw a drop in enrollment starting in the 2020-21 school year and continuing into the fall of 2021, most notably at the K-5 level, as families considered alternative education opportunities during the pandemic. With the return to in-person learning, the District anticipates that enrollment will return to pre-pandemic projections and continue to grow over the six-year planning period. This 2022 update builds on the 2020 CFP and identifies a growth-related projects at the middle school level and anticipates the completion of an addition at the high school in the summer of 2022.

Arlington School District # 16

2

SECTION 2

DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables).

In addition to student population, other factors such as collective bargaining agreements, government mandates, and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music programs. These programs can have a significant impact on the available student capacity of school facilities.

A. Districtwide Educational Program Standards

Special programs offered by the District at specific school sites include, but are not limited to:

- APPLE (formerly named ECEAP);
- Elementary program for students with special needs; and
- Enhanced Learning Program/Highly Capable; and
- English Language Learner Program (Eagle Creek Elementary).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates or needs for special programs, or use of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels. Each grade span has a targeted level of service (LOS) which is expressed as a "not to exceed" number. The minimum LOS for each grade span is expressed as "maximum average class size". This figure is used to determine when another class is added. When this average is exceeded, the District will add additional classes if space is available. Only academic classes are used to compute the maximum average class size.

The District has fully implemented full-day kindergarten in and reduced K-3 class size requirements.

B. Educational Program Standards for Elementary Schools

- Class size for Kindergarten and grades 1-3 is targeted not to exceed 21 students, with a maximum average class size of 21 students;
- Class size for grade 4 is targeted not to exceed 25 students, with a maximum average class size of 27 students;
- Class size for grade 5 is targeted not to exceed 27 students, with a maximum average class size of 29 students;
- Special Education for some students is provided in a self-contained classroom;
- Music instruction will be provided in a separate classroom (when available); and
- All elementary schools currently have a room dedicated as a computer lab, or have access to mobile carts with laptop computers for classroom use.

C. Educational Program Standards for Middle and High Schools

- Class size for grade 6 is targeted not to exceed 27 students, with a maximum average class size of 29 students
- Class size for middle school grades 7-8 is targeted not to exceed 29 students, with a maximum average class size of 31 students;
- Class size for high school grades 9-12 is targeted not to exceed 30 students, with a maximum average class size of 32 students;
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, high school classroom capacity has been adjusted using a utilization factor in the range of 90% to 96% (based on a regular school day). Middle school classroom capacity has been adjusted using a utilization factor of 85%;
- Special Education for some students will be provided in a self-contained classroom; and
- Identified students will also be provided other programs in classrooms designated as follows:
 1. Resource Rooms (i.e. computer labs, study rooms).
 2. Learning Support Centers.
 3. Program Specific Classrooms (i.e., music, drama, art, home and family education).

D. Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole, while meeting the District's paramount duties under the State Constitution. A boundary change or a significant programmatic change would be made by the District's Board of Directors following appropriate public review and comment. The District

may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's intent is to adhere to the target facility service standards noted above without making significant changes in program delivery. At a minimum, average class size in the grade K-8 classrooms will not exceed 26 students and average class size in 9-12 classrooms will not exceed 32 students. For purposes of this determination, the term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education, and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom or to classes held in assembly halls, gyms, cafeterias, or other common areas.

The minimum educational service standards are not the District's desired or accepted operating standard.

For the school years of 2019-20 and 2020-21, the District's compliance with the minimum level of service was as follows

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	22.48	26	20.04	32	33.68

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations.

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	20.06	26	19.19	32	32.19

* The District determines the reported service level by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations. Portables are not included in this analysis.

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See Section 2.* A map showing locations of District facilities is provided as Figure 1.

A. Schools

The District maintains four elementary schools, two middle schools, one high school, an alternative high school, and the Stillaguamish Valley School (a Home-School Support center). Elementary schools currently accommodate grades K-5, the middle schools serve grades 6-8, and the high school and alternative high school provide for grades 9-12. The Stillaguamish Valley School serves grades K-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Tables 1, 2, and 3.

The Stillaguamish Valley School and Weston High School are housed in separate District-owned facilities and are not included in this CFP for the purposes of measuring capacity or projecting enrollment. Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Tables 1, 2, and 3.

**Table 1
Elementary School Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Eagle Creek	23.70	57,362	28	630	1989

Middle School Inventory

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations*	Permanent Capacity	Year Built or Remodeled
Post Middle	24.60	76,323	36	757	1993
Haller Middle	25.46	86,002	31	612	2006
TOTAL	50.06	162,325	67	1,369	

*Includes a total of six special education classrooms between both schools.

Table 3
High School Inventory

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Arlington High	54.00	256,181	53	1,780	2003; 2022

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses thirteen relocatable classrooms at various school sites throughout the District to provide additional interim capacity (an additional 10 relocatables are located at Stillaguamish Valley School). A typical relocatable classroom can provide capacity for a full-size class of students. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly. Current use for the 2022-19 school year of relocatable classrooms throughout the District is summarized in Table 4.

Table 4
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatables	Interim Capacity
Eagle Creek	2	58
Kent Prairie	4	84
Presidents	2	58
Middle School	Relocatables	Interim Capacity
Post Middle	4	113
High School	Relocatables	Interim Capacity
Arlington High	1	32
TOTAL	13	345

C. Support Facilities

In addition to schools, the District owns and operates additional facilities, which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5
Support Facility Inventory

Facility	Building Area (Square Feet)	Site Location	Address
Administration and Special Programs	21,402	Roosevelt Building, Presidents	315 N. French Ave
Transportation	41,550	Leased	19124 63 rd Ave Ne
Support Services	70,991	Old HS “A” Bldg	135 S. French Ave

D. Land Inventory & Other Facilities

The District owns the following undeveloped sites:

- A 167-acre site (“Hwy 530 Site”) located 1.5 miles from the city limits of Arlington adjacent to SR 530. The property is outside of the Urban Growth Area boundary and not serviced by municipal utilities. The District is currently negotiating a sale of this property.
- Seven sites ranging from 25 to 160 acres that are managed as forest land by a forestland manager and generally topographically unsuitable for school site development.
- An additional 58.9 acres at the Post Middle School site of farmland located in a floodplain and therefore unsuitable for development.

The District owns the “A” Building on the former high school campus. The “A” Building has been taken out of educational use and is no longer eligible (by OSPI) for use as for classroom space.

The Stillaguamish Valley School, which supports home-schooled students, is located on the Eagle Creek Elementary site. This facility consists of 10 portable classrooms and is not considered part of the District’s permanent facility capacity.

Additionally, the District leases a 33,000 square foot building on a 10 acre site near the Arlington Airport. This remodeled building houses the (alternative) Weston High School. Since this site houses only alternative educational programs, the building’s capacity is not included as part of the District’s eligible facility inventory¹.

¹ Students enrolled in these alternative programs are not included in enrollment numbers for the purposes of this CFP update.

SECTION 4 STUDENT ENROLLMENT PROJECTIONS

A. Projected Student Enrollment 2022-2027

Enrollment projections are most accurate for the initial years of the forecast period. In the past, the District has used the methodology from the Office of Superintendent of Public Instruction (OSPI) to determine enrollment projections. The cohort survival method uses historical enrollment data to forecast the number of students who will be attending school the following year. The cohort method has not proven to be a reliable measure for the Arlington School District. It uses a weighted average of the most recent years to project enrollment and is not designed to anticipate fluctuations in development patterns or isolated variances in student enrollment. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in 2020. For information purposes only, the OSPI cohort survival projections are included in Appendix A-1.

The District has worked with an outside demographer, FLO Analytics, to obtain enrollment projections that consider historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-2. Using the District's enrollment projections, the District anticipates an increase in enrollment increase of approximately 14.5% by the 2027-28 school year, with growth occurring at all grade levels.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts as adopted by Snohomish County. Between 2014 and 2019, the District's enrollment constituted 17.2% of the total population in the District. In 2020, the District's enrollment constituted 15.60% of the total population in the District. The District is choosing to rely on the assumption that District enrollment will follow the 2014-2019 pattern of 17.2%. Using this percentage, a total enrollment of 6,450 HC students is projected in 2027.

**Table 6
Projected Student Enrollment
2021-2027**

								Change	% Change
Projection	2021*	2022	2023	2024	2025	2026	2027	21-27	21-27
District	5,374	5,545	5,678	5,861	5,927	6,039	6,135	779	14.5%
OFM/County	5,374	5,553	5,732	5,911	6,090	6,269	6,450	1,076	20.02%

* Actual October 2021 HC enrollment

The District uses the adjusted District demographer's enrollment projections for purposes of predicting enrollment during the six years of this Plan. The District will monitor actual enrollment over the next two years and, if necessary, make appropriate adjustments in the next Plan update.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Based on OFM/County data for 2027 and an estimated student-to-population ratio of 17.2%, 8,084 HC students are projected for 2044. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle, and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle school, and high school levels.

Projected enrollment by grade span for the year 2044² is provided in Table 7. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 7
Projected Student Enrollment
(Ratio Method – OFM/County)
2044

Grade Span	Projected Enrollment
Elementary (K-5)	3,408
Middle School (6-8)	1,943
High School (9-12)	2,733
TOTAL (K-12)	8,084

² Snohomish County Planning & Development Services provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

Projected available student capacity was derived by subtracting projected student enrollment from existing school capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). Capacity needs are expressed in terms of “unhoused students.” Note that the identified capacity needs do not include growth-related capacity needs from recent development.

Table 8A below shows future capacity needs assuming no new construction during the planning period.

**Table 8A
Future Capacity Needs**

Grade Span	2027 Projected Unhoused Students - Total	2027 Projected Unhoused Students – Growth Post-2021
Elementary (K-5)	286	286
Middle School (6-8)	37	37
High School (9-12)	37	142
TOTAL (K-12)	360	465

Projected student capacity is depicted on Table 8B. This is derived by applying the projected number of students to the projected capacity. Planned improvements (if any) by the District through 2027 are included in Table 8B. It is not the District’s policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms (including additions and adjustments) is not included. Information on relocatable classrooms and interim capacity can be found in Table 4. Information on planned construction projects can be found in Section 6 and the Financing Plan, Table 9.

Table 8B
Projected Student Capacity
2022 - 2027

^Arlington High School Addition (complete summer 2022)

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

The District has identified several capacity projects within the six year planning period needed to meet growth-related needs:

Permanent Capacity Adding Projects:

- Replacement of Post Middle School with the addition of 150 new student seats.
- Expansion of Arlington High School would add 256 additional student seats (anticipated to be complete in summer 2022, with remaining available capacity anticipated during the six-year planning period).

Temporary Capacity Projects:

- The District plans to add portable facilities at the elementary level and potentially at other levels during the six year planning period of this CFP.

Property Acquisition:

- The District plans to acquire land for an elementary school site.

The District is also starting to plan for elementary capacity solutions as growth continues at that grade level. Future updates to the CFP will include any specifically planned projects.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, state school construction assistance program funds, and impact fees. Each of these funding sources is discussed in greater detail below.

B. Financing Sources

1. General Obligation Bonds/Capital Levies

Bonds are typically used to fund construction of new schools and other capital improvement projects, and require a 60% voter approval. Capital levies require a 50% voter approval and can be used for certain capital improvement projects. In February 2020, the District presented a \$25.1 million capital levy and \$107.5 million bond measure to its voters. The voters approved the capital levy, which includes, among other things, funding for the new classrooms and a science, technology, engineering, art and math (STEAM) workshop wing addition at Arlington High School. The bond proposal included funding for the construction of a new middle school to replace Post Middle School. The bond did not achieve the required 60% minimum for passage. Subject to future Board action, the District anticipates presenting a bond proposal to the voters in 2024, which would include the replacement/expansion of Post Middle School.

2. State School Construction Assistance Funds

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is currently eligible for state school construction assistance funds at the 61.26% level for eligible projects.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development.

C. Six-Year Financing Plan

Table 9 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include capital levy funds, future bond revenue, impact fees, and other future sources. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 9
Capital Facilities Financing Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/Other Local	State Match	Impact Fees

Various Schools (all grade levels)										
Security improvements; pedestrian safety improvements; energy efficiency measures; miscellaneous improvements	\$17.117*							X		

*Project complete summer 2022; funds reflect total costs with some funds expended in previous years.

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County and the City of Arlington’s impact fee programs require school districts to prepare and adopt CFPs meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development.

A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student methodology is contained in Appendix B. The District obtained for the first time a data set for multi-family dwelling units of one bedroom and less. However, the low rate of students residing in these units does not generate an impact fee.

As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 8-A. For purposes of this Plan, the District has chosen to use the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 9 for a complete identification of funding sources.

The following projects are included in the impact fee calculation:

- A capacity addition at Arlington High School.
- A capacity addition at the replacement Post Middle School

Please see Table 11 for relevant cost data related to each capacity project.

C. Proposed Arlington School District Impact Fee Schedule

Using the variables and formula described in subsection B, impact fees proposed for the District are summarized in Table 10. See also Appendix C.

Table 10
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$4,002
Multi-Family (1 Bedroom)	No fee (\$0)
Multi-Family (2+ Bedroom)	\$2,328

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: Brian Lewis
Executive Director of Operations
Arlington Public Schools

Date: March 18, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F2116.01.002

Re: **Student Generation Report—Arlington Public Schools**

At the request of the Arlington Public Schools (District/APS), FLO Analytics (FLO) has prepared an analysis of student generation rates (SGRs) resulting from recent (2017 to 2021) residential construction within the district. This document details the methodology FLO used to create the SGRs for APS; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF housing, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of two mobile home sites that have been present since at least 2010 and a large MF site that was not completed prior to the end of 2021 (Pilchuck Village). The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 636 SF units and five MF buildings completed between 2017 and 2021. While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (528 units), a variety of units with other SF use codes were also constructed, including duplexes, condominiums, manufactured homes (owned and leased), and approximately 150 units in a mobile home park. While less active than SF construction, MF construction resulted in 456 new units. About 64 percent (293 units) of these new MF units were 2+ BR units, while the remainder (163 units) were 0–1 BR units.

Project No. F2116.01.002
Page 2

All students (grades kindergarten [K] through 12) in the October 18, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 636 SF units were compared with the 5,374 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	26	0.041
1	18	0.028
2	28	0.044
3	21	0.033
4	15	0.024
5	23	0.036
6	18	0.028
7	24	0.038
8	20	0.031
9	21	0.033
10	17	0.027
11	15	0.024
12	16	0.025
K-5	108	0.206
6-8	65	0.097
9-12	73	0.108
K-12	246	0.412

*Calculated rates for grade level groups may not equal the sum of individual grade rates due to rounding.

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Brian Lewis
March 18, 2022

Project No. F2116.01.002
Page 3

FLO reached out to the building management at the five projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Park 77, Emory Lofts A and B, and Centennial Park. Bedroom counts were ascertained for seven townhouse units (all are 2+ BR) located on the north side of the city along W Burke Avenue; however, no students reside within these units.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR multifamily units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 163 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

K–5	3	0.018
6–8	0	0.000
9–12	0	0.000
K–12	3	0.018

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 293 2+ BR units in total were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Lakewood School District (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the cities of Arlington and Marysville with a description of facilities needed to accommodate projected student enrollment and a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, adopted County Policy, the Snohomish County Ordinance Nos. 97-095 and 99-107, the City of Arlington Ordinance No. 1263, and the City of Marysville Ordinance Nos. 2306 and 2213, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high school).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- As relevant, a calculation of impact fees to be assessed and supporting data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state,

county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.

- The methodology used to calculate impact fees also complies with the criteria and the formulas established by the County.

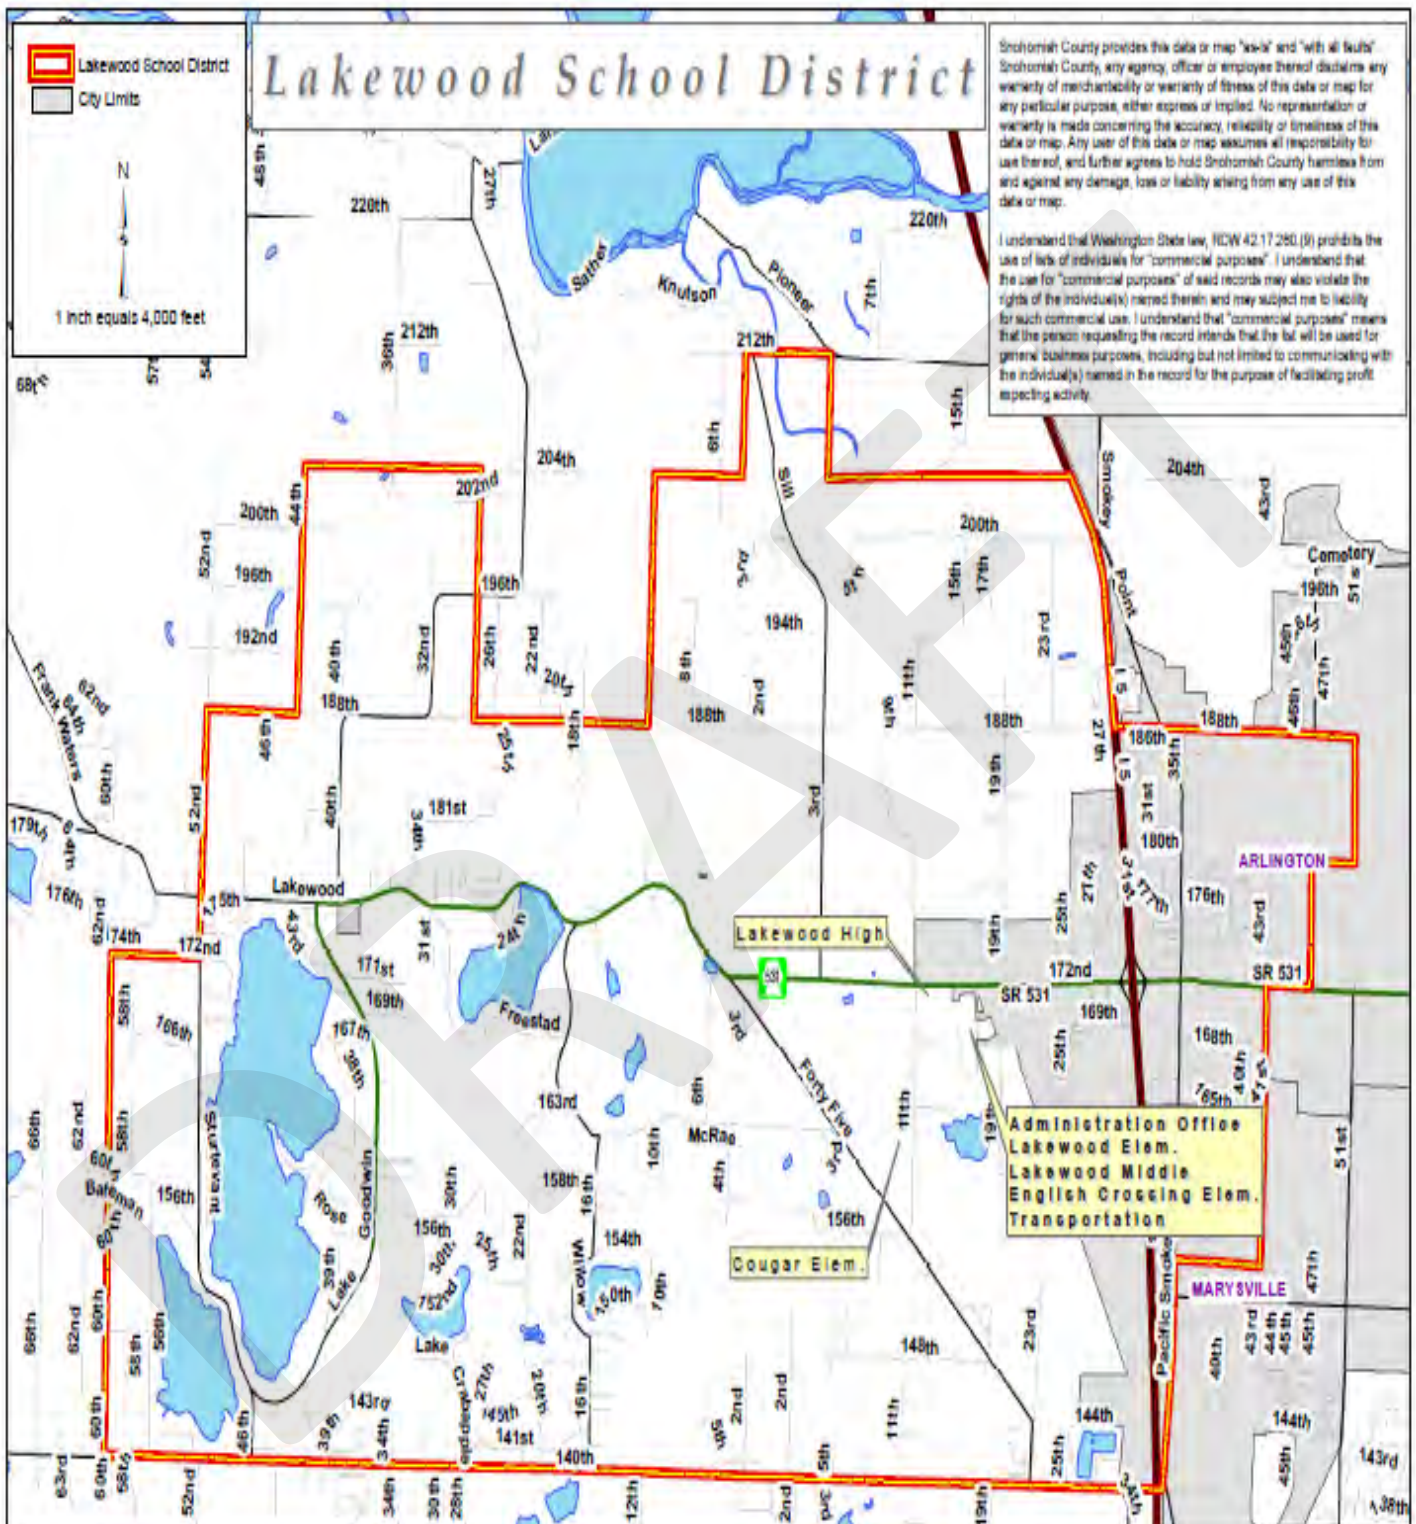

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of the Lakewood School District

The Lakewood School District is located along Interstate 5, north of Marysville, Washington, primarily serving unincorporated Snohomish County and a part of the City of Arlington and the City of Marysville. The District is bordered on the south by the Marysville School District, on the west and north by the Stanwood School District, and on the east by the Arlington School District.

The District serves a student population of 2,574 (October 1, 2021, reported OSPI HC enrollment) with three elementary schools, one middle school, and one high school.

**FIGURE 1
MAP OF FACILITIES**

SECTION 2

DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables), as well as specific and unique physical structure needs required to meet the needs of students with special needs.

In addition to factors which affect the amount of space required, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional, or special programs such as special education, expanded bilingual education, remediation, migrant education, alcohol and drug education, AIDS education, preschool and daycare programs, computer labs, music programs, and others. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities, and upon planning for future needs.

The educational program standards contained in this CFP reflect the District's implementation of requirements for full-day kindergarten and reduced K-3 class size.

Special programs offered by the District at specific school sites include, but are not limited to:

Lakewood Elementary School (Preschool through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- P – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Early Childhood Education and Assistance Program (ECEAP)
- Developmentally Delayed Preschool Program - Ages 3 to 5
- K-5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- Learning Assistance Program - Remedial Services
- Occupational Therapy Program

English Crossing Elementary School (Kindergarten through 5th Grades)

- K through 5th Grade Special Education Resource Room Program
- Bilingual Education Program
- K – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Developmentally Delayed Preschool Program - Ages 3 to 5
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- Special Education EBD Program

Cougar Creek Elementary School (Kindergarten through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- Speech and Language Disorder Therapy Program
- Learning Assistance Program – Remedial Services (Learning Lab)
- Occupational Therapy Program
- K – 5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- K – 5th Grade Counseling Services
- 3 – 5th Highly Capable/Enrichment Program (serves grades 3-5 district-wide)

Lakewood Middle School (6th through 8th Grades)

- Speech and Language Disorder Therapy Program
- 6th-8th Grade Special Education Resource and Inclusion Program
- 6th-8th Grade Special Education Life Skills Program
- Bilingual Education Program
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- 6th – 8th EBD Program
- 6th – 8th Grade Counseling Services

Lakewood High School

- 9th-12th Grade Special Education Resource Room and Transition Program
- 6th-12th Grade Special Education Life Skills Program
- Bilingual Education Program
- Occupational Therapy Program
- Speech and Language Disorder Program
- 9th – 12th Grade Counseling Program

Variations in student capacity between schools may result from the special or nontraditional programs offered at specific schools. Some students, for example, leave their regular classroom for a short period of time to receive instruction in these special programs. New schools are designed to accommodate many of these programs. However, existing schools often require space

modifications to accommodate special programs, and in some circumstances, these modifications may affect the overall classroom capacities of the buildings.

District educational program standards may change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, use of new technology, and other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards For Elementary Schools

- Class size for grades K – 3rd will not exceed 19 students.
- Class size for grades 4th and 5th will not exceed 24 students.
- All students will be provided library/media services in a school library.
- Special Education for students may be provided in self-contained or specialized classrooms.
- All students will be provided music instruction in a separate classroom.
- All students will have scheduled time in a computer lab. Each classroom will have access to computers and related educational technology.
- Optimum design capacity for new elementary schools is 475 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- All students will be provided physical education instruction in a gym/multipurpose room.

Educational Program Standards For Middle and High Schools

- Class size for middle school grades will not exceed 27 students.
- Class size for high school grades will not exceed 29 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a work space during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. In updating this Capital Facility Plan, a building review of classroom use was conducted in order to reflect the actual classroom utilization in the high school and middle school. Therefore, classroom capacity should be adjusted using a utilization factor of 95% at the middle school and 85% at the high school to reflect the use of classrooms for teacher planning. Special Education for students will be provided in self-contained or specialized classrooms.
- All students will have access to computer labs. Each classroom is equipped with access to computers and related educational-technology.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Counseling Offices
 - Resource Rooms (i.e. computer labs, study rooms)
 - Special Education Classrooms

Program Specific Classrooms (i.e. music, drama, art, physical education, Industrial Arts and Agricultural Sciences).

- Optimum design capacity for new middle schools is 600 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- Optimum design capacity for new high schools is 800 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole. A boundary change or a significant programmatic change would be made by the Board of Directors following appropriate public review and comment. The District may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's minimum level of service ("MLOS") is as follows: on average, K-5 classrooms have no more than 26 students per classroom, 6-8 classrooms have no more than 28 students per classroom, and 9-12 classrooms have no more than 30 students per classroom. The District sets minimum educational service standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. Minimum standards have not been met if, on average using current FTE figures: K-4 classrooms have more than 26 students per classroom, 5-8 classrooms have more than 28 students per classroom, or 9-12 classrooms more than 30 students per classroom. The term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom. The MLOS is not the District's desired or accepted operating standard.

For 2019-20 and 2020-21, the District's compliance with the MLOS was as follows (with MLOS set as applicable for those school years):

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.86	28	26.08	30	22.59

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.17	28	23.11	30	22.88

* The District determines the reported LOS by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations (excludes portables).

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. Facility capacity is based on the space required to accommodate the District's adopted educational program standards. *See* Section 2. Attached as Figure 1 (page 3) is a map showing locations of District facilities.

A. Schools

The District maintains three elementary schools, one middle school, and one high school. Lakewood Elementary School accommodates grades P-5, Cougar Creek Elementary School accommodates grades K-5, and English Crossing Elementary School accommodates grades K-5. Lakewood Middle School serves grades 6-8, and Lakewood High School serves grades 9-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 1.

Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities are not included in Table 1.

**Table 1
School Capacity Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
English Crossing	*	41,430	20	403	1994
Cougar Creek	10**	44,217	22	444	2003
Lakewood	*	45,400	16	323	1958, 1997
TOTAL	*	131,047	58	1,170	

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood Middle	*	62,835	27	670	1971, 1994, 2002, 2022

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood High	*	169,000	34	850	2017

*Note: All facilities are located on one 89-acre campus located at Tax Parcel No. 31053000100300.

**The Cougar Creek site is approximately 22 acres located at 16216 11th Ave NE, Arlington, WA 98223. Note that the presence of critical areas on the site does not allow full utilization at this site.

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses 15 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. A typical relocatable classroom can provide capacity for a full-size class of students. Current use of relocatable classrooms throughout the District is summarized in Table 2. Table 2 includes only those relocatable classrooms used for regular capacity purposes. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly.

Table 2
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatable Classrooms	Interim Capacity
English Crossing	2	40
Cougar Creek	4	80
Lakewood	6	120
SUBTOTAL	12	240

Middle School	Relocatable Classrooms	Interim Capacity
Lakewood Middle	3	78
SUBTOTAL	3	78

High School	Relocatable Classrooms	Interim Capacity
Lakewood High	0	0
SUBTOTAL	0	0

TOTAL	15	318
--------------	-----------	------------

C. Support Facilities

In addition to schools, the District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 3.

Table 3
Support Facility Inventory

Facility	Building Area (Square Feet)
Administration	1,384
Business and Operations	1,152
Storage	2,456
Bus Garage/Maintenance Shop	7,416
Stadium	14,304

The District is also a party to a cooperative agreement for use of the Marysville School District transportation facility (which is owned by the Marysville School District).

D. Land Inventory

The District does not own any sites which are developed for uses other than schools and/or which are leased to other parties.

SECTION 4 STUDENT ENROLLMENT PROJECTIONS

The District's October 1, 2021, reported enrollment was 2,574 HC students (2,517.3 FTE). Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions and demographic trends in the area affect the projection. Monitoring birth rates in Snohomish County and population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projection.

A. Six Year Enrollment Projections

Two enrollment forecasts were conducted for the District: an estimate by the Office of the Superintendent of Public Instruction (OSPI) based upon the cohort survival method; and a modified cohort enrollment forecast prepared by a demographer. The District also estimated enrollment based upon adopted Snohomish County population forecasts ("ratio method").

Based on the cohort survival methodology, a total of 2,685 students are expected to be enrolled in the District by 2027, a slight increase from the October 2021 enrollment levels. Notably, the cohort survival method is not designed to anticipate fluctuations in development patterns. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in the 2020-21 school year. Historically, the cohort method has not proven to be a reliable measure for the Lakewood School District. For example, the cohort projection in 2017 predicted that the District's October 2019 enrollment would be 2,423, about 91 fewer students than the actual October 2019 enrollment figures. The 2021 cohort projections for 2027 show a 4.3% projected increase by the 2027 school year. See Appendix A-1.

Snohomish County provides OFM population-based enrollment projections for the District using OFM population forecasts as adopted by the County. The County provided the District with the estimated total population in the District by year. In 2020, the District's student enrollment constituted approximately 14.58% of the total population in the District. Assuming that between 2022 and 2027, the District's enrollment will continue to constitute 14.58% of the District's total population and using OFM/County data, OFM/County methodology projects a total enrollment of 2,757 students in 2027, or an approximately 7.11% increase. See Appendix A-2.

The District obtained in 2022 an enrollment forecast from a professional demographer, FLO Analytics. Based on this analysis, a total enrollment of 2,791, or 274 additional students, are expected by the 2027-28 school year. This projection is an increase of approximately 10.9% over 2021 enrollment. Growth is projected at all three grade levels. The FLO Analytics forecast utilizes historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-3.

The comparison of OSPI cohort, District projections, and OFM/County projected enrollments is contained in Table 4.

Table 4
Projected Student Enrollment (FTE)
2022-2027

Projection	Oct. 2021*	2022	2023	2024	2025	2026	2027	Change 2020-27	Percent Change 2010-27
OFM/County	2,574	2,604	2,635	2,666	2,696	2,727	2,757	183	7.11%
OSPI Cohort**	2,574	2,572	2,608	2,613	2,627	2,637	2,685	111	4.3%
District***	2,517	2,527	2,580	2,617	2,663	2,709	2,791	274	10.89%

* Actual reported enrollment, October 2021 (headcount for OFM/OSPI; FTE for District)

**Based upon the cohort survival methodology; complete projections located at Appendix A..

***FLO Analytics (2022) using FTE; grade level projections located in Appendix A.

The District is aware of notable pending residential development within the District. Specifically, nearly 1,100 multi-family units are planned for or currently in construction within the District boundaries as well as nearly 500 single family units.

Given the District-specific detailed analysis contained in the FLO Analytics report, the District is relying on the projections in that report for purposes of planning for the District's needs during the six years of this plan period. Future updates to the Plan will continue to revisit enrollment projections and methodologies.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Using OFM/County data as a base, the District projects a 2044 student HC population of 3,512. This is based on the OFM/County data using total population as related to District enrollment.

Projected enrollment by grade span for the year 2044 is provided in Table 5. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 5
Projected Student Enrollment
2044

Grade Span	HC Enrollment – October 2021	Projected Enrollment 2044*
Elementary (K-5)	1,145	1,562
Middle School (6-8)	584	797
High School (9-12)	845	1,153
TOTAL (K-12)	2,574	3,512

*Assumes average percentage per grade span remains constant between 2021 and 2044.

Note: Snohomish County Planning and Development Service provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

The projected available student capacity was determined by subtracting projected FTE student enrollment from permanent school capacity (i.e. excluding portables) for each of the six years in the forecast period (2022-2027).

Capacity needs are expressed in terms of “unhoused students.”

Projected future capacity needs are depicted on Table 6-A and are derived by applying the projected enrollment to the capacity existing in the 2021-22 school year. The method used to define future capacity needs assumes no new construction. For this reason, planned construction projects are not included at this point. This factor, as applicable, is added later (see Table 7).

This table shows actual space needs and the portion of those needs that are “growth related” for the years 2022-2027. Note that this chart can be misleading as it reads out growth-related capacity needs related to recent growth within the District.

Table 6-A*
Additional Capacity Needs***
2021-2027

Grade Span	2021**	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28	Pct. Growth Related
Elementary (K-5)								
Total	0	0	12	40	35	77	80	
Growth Related	--	--	12	40	35	77	80	100%
Middle School (6-8)								
Total	0	0	0	0	5	0	28	
Growth Related	--	--	--	--	5	0	28	100%
High School								
Total	0	0	0	0	0	0	0	
Growth Related	--	--	--	--	--	--	--	--%

*Please refer to Table 7 for capacity and projected enrollment information.

**Actual October 2021 Enrollment

***Additional “Growth Related Capacity Needs” equal the “Total” for each year less “deficiencies” existing as of 2021. Existing deficiencies as of 2021 include capacity needs related to recent growth from new development through that date.

By the end of the six-year forecast period (2027), additional permanent classroom capacity will be needed as follows:

Table 6-B
Unhoused Students

Grade Span	Unhoused Students /Growth Related in Parentheses)
Elementary (K-5)	80/(80)
Middle School (6-8)	28/(28)
High School (9-12)	-(-)
TOTAL UNHOUSED (K-12)	108/(108)

Again, planned construction projects are not included in the analysis in Table 6-B. In addition, it is not the District's policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms is not included in Table 6-B. However, Table 6-C incorporates the District's current relocatable capacity (see Table 2) for purposes of identifying available capacity.

Table 6-C
Unhoused Students – Mitigated with Relocatables

Grade Span	2027 Unhoused Students /Growth Related in (Parentheses)	Relocatable Capacity
Elementary (K-5)	80/(80)	240
Middle School (6-8)	28/(28)	78
High School (9-12)	-(-)	0
Total (K-12)	108(108)	318

Importantly, Table 6-C does not include relocatable adjustments that may be made to meet capacity needs. For example, the relocatable classrooms currently designated to serve elementary school needs could be used to serve high school capacity needs. Therefore, assuming no permanent capacity improvements are made, Table 6-C indicates that the District will have adequate interim capacity with the use of relocatable classrooms to house students during this planning period.

Projected permanent capacity needs are depicted in Table 7. They are derived by applying the District's projected number of students to the projected capacity. Planned improvements by the District through 2027 are included in Table 7 and more fully described in Table 8.

Table 7
Projected Student Capacity
2022-2027

Elementary School Surplus/Deficiency

	Oct 2021*	2022	2023	2024	2025	2026	2027
Existing Capacity	1,170	1,170	1,170	1,170	1,170	1,170	1,170
Added Permanent Capacity

Surplus (Deficiency)**	51	60	84	90	67	50	7

* Reported October 2021 enrollment

**Does not include portable capacity

See Appendix A for complete breakdown of enrollment projections.

See Table 6-A for a comparison of additional capacity needs due to growth versus existing deficiencies.

Table 7 does not include existing, relocated, or added portable facilities.

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

In March 2000, the voters passed a \$14,258,664 bond issue for school construction and site acquisition. A new elementary school and a middle school addition were funded by that bond measure. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition at Lakewood High School, which opened in the fall of 2017. In the Spring of 2020, the District added a STEM lab and two classrooms at Lakewood Middle School.

Currently, the District is assessing future capacity needs and, at the present time, anticipates adding portable capacity to address short term needs with immediate plans to add portables in the summer of 2022 in the space between Lakewood Middle School and Lakewood Elementary School to add K-5 interim capacity at LES. Based upon current needs, the District anticipates that it may need to consider the following acquisitions and/or improvements within the six years of this Plan. The District is not planning for permanent capacity improvements as a part of this CFP update. Future updates to this CFP will identify updated plans and funding sources.

Projects Adding Permanent/Temporary Capacity:

- Acquisition and siting of portable facilities to accommodate growth needs.

Non-Capacity Adding Projects:

- None planned

Other:

- Land acquisition for future sites.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, State School Construction Assistance funds, and impact fees. Where applicable, the potential funding sources are discussed below.

B. Financing for Planned Improvements

1. General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes. In March 2000, District voters approved a \$14,258,664 bond issue for school construction and site acquisition, which included funding of Cougar Creek Elementary School. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition, at Lakewood High School. The District does not have current plans for a future bond or capital levy proposal.

2. State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is eligible for State School Construction Assistance Program (SCAP) funds for certain projects at the 58.28% funding percentage level. The District does not anticipate being eligible for SCAP funds for the projects planned in this CFP.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

4. Six Year Financing Plan

The Six-Year Financing Plan shown in Table 8 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. Where applicable, potential financing components include a bond or capital levy, impact fees, and State School Construction Assistance Program funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 8
Capital Facilities Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/ Other Local	State Funds	Impact Fees

Elementary										
Middle School										
High School										

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development. A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student factor methodology is contained in Appendix B. As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do

not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 6-A. When calculating impact fees, the District uses the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 8 for a complete identification of funding sources.

The District is not requesting school impact fees as a part of this Capital Facilities Plan update.

FACTORS FOR ESTIMATED IMPACT FEE CALCULATIONS

C. Proposed Lakewood School District Impact Fee Schedule

The District does not have permanent capacity projects planned as a part of the 2022 CFP. See discussion in Section 6 above. As such, the District is not requesting the collection of school impact fees as a part of this Capital Facilities Plan. The District expects that future project planning and updates to the Capital Facilities Plan will result in a renewed request for impact fees as a part of a future CFP.

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: John Poolman
Executive Director of Finance
Lakewood School District

Date: April 4, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F1867.01.004

Re: **Student Generation Report— Lakewood School District**

At the request of the Lakewood School District (District/LSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent single-family and multifamily construction (2017–2021) within the district. This document details the methodology FLO used to create the SGRs for LSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential construction developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of three mobile home sites that have been present since at least 2010. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 127 SF units and 6 MF buildings completed between 2017 and 2021 (SF). While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (115 units), other SF use codes were also constructed, including construction classified as 2 Single Family Residences (two detached residences per parcel) and manufactured homes (owned and leased). MF development ranged from 15–20 unit residences to 301+ unit construction. About 87 percent (734 units) of these new MF units were 2+ BR units, while the remainder (114 units) were 0–1 BR units. While considered MF buildings, Cedar Pointe Apartments (Senior Facility) and Holman Recovery Center were removed from the analysis.

R:\F1867.01 Lakewood School District\Document\004_2022.04.04 Student Generation Report\Lakewood SD Student Generation Report 2022.docx

John Poolman
April 4, 2022

Project No. F1867.01.004
Page 2

All students (grades kindergarten [K] through 12) in the October 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 127 SF units were compared to the 2,602 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	2	0.016
1	5	0.039
2	6	0.047
3	1	0.008
4	1	0.008
5	1	0.008
6	5	0.039
7	3	0.024
8	2	0.016
9	2	0.016
10	3	0.024

6–8	10	0.079
9–12	8	0.063
K–12	34	0.263

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

John Poolman
April 4, 2022

Project No. F1867.01.004
Page 3

FLO reached out to the building management at the six projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Villas at Arlington, Trailside at the Lodge, and Twin Lakes Landing. Despite numerous attempts, no bedroom information could be received from The Landing at Smokey Pointe for the two students living at units within this building. Based on trends within and surrounding the district, we assumed both students reside within a 2+ BR unit. No students reside at Affinity at Arlington and the unnamed garden style apartment.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 114 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

Grade	Matches	Rate

6–8	0	0.000
9–12	0	0.000
K–12	3	0.026

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 734 2+ BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Lakewood School District (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the cities of Arlington and Marysville with a description of facilities needed to accommodate projected student enrollment and a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, adopted County Policy, the Snohomish County Ordinance Nos. 97-095 and 99-107, the City of Arlington Ordinance No. 1263, and the City of Marysville Ordinance Nos. 2306 and 2213, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high school).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- As relevant, a calculation of impact fees to be assessed and supporting data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state,

county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.

- The methodology used to calculate impact fees also complies with the criteria and the formulas established by the County.

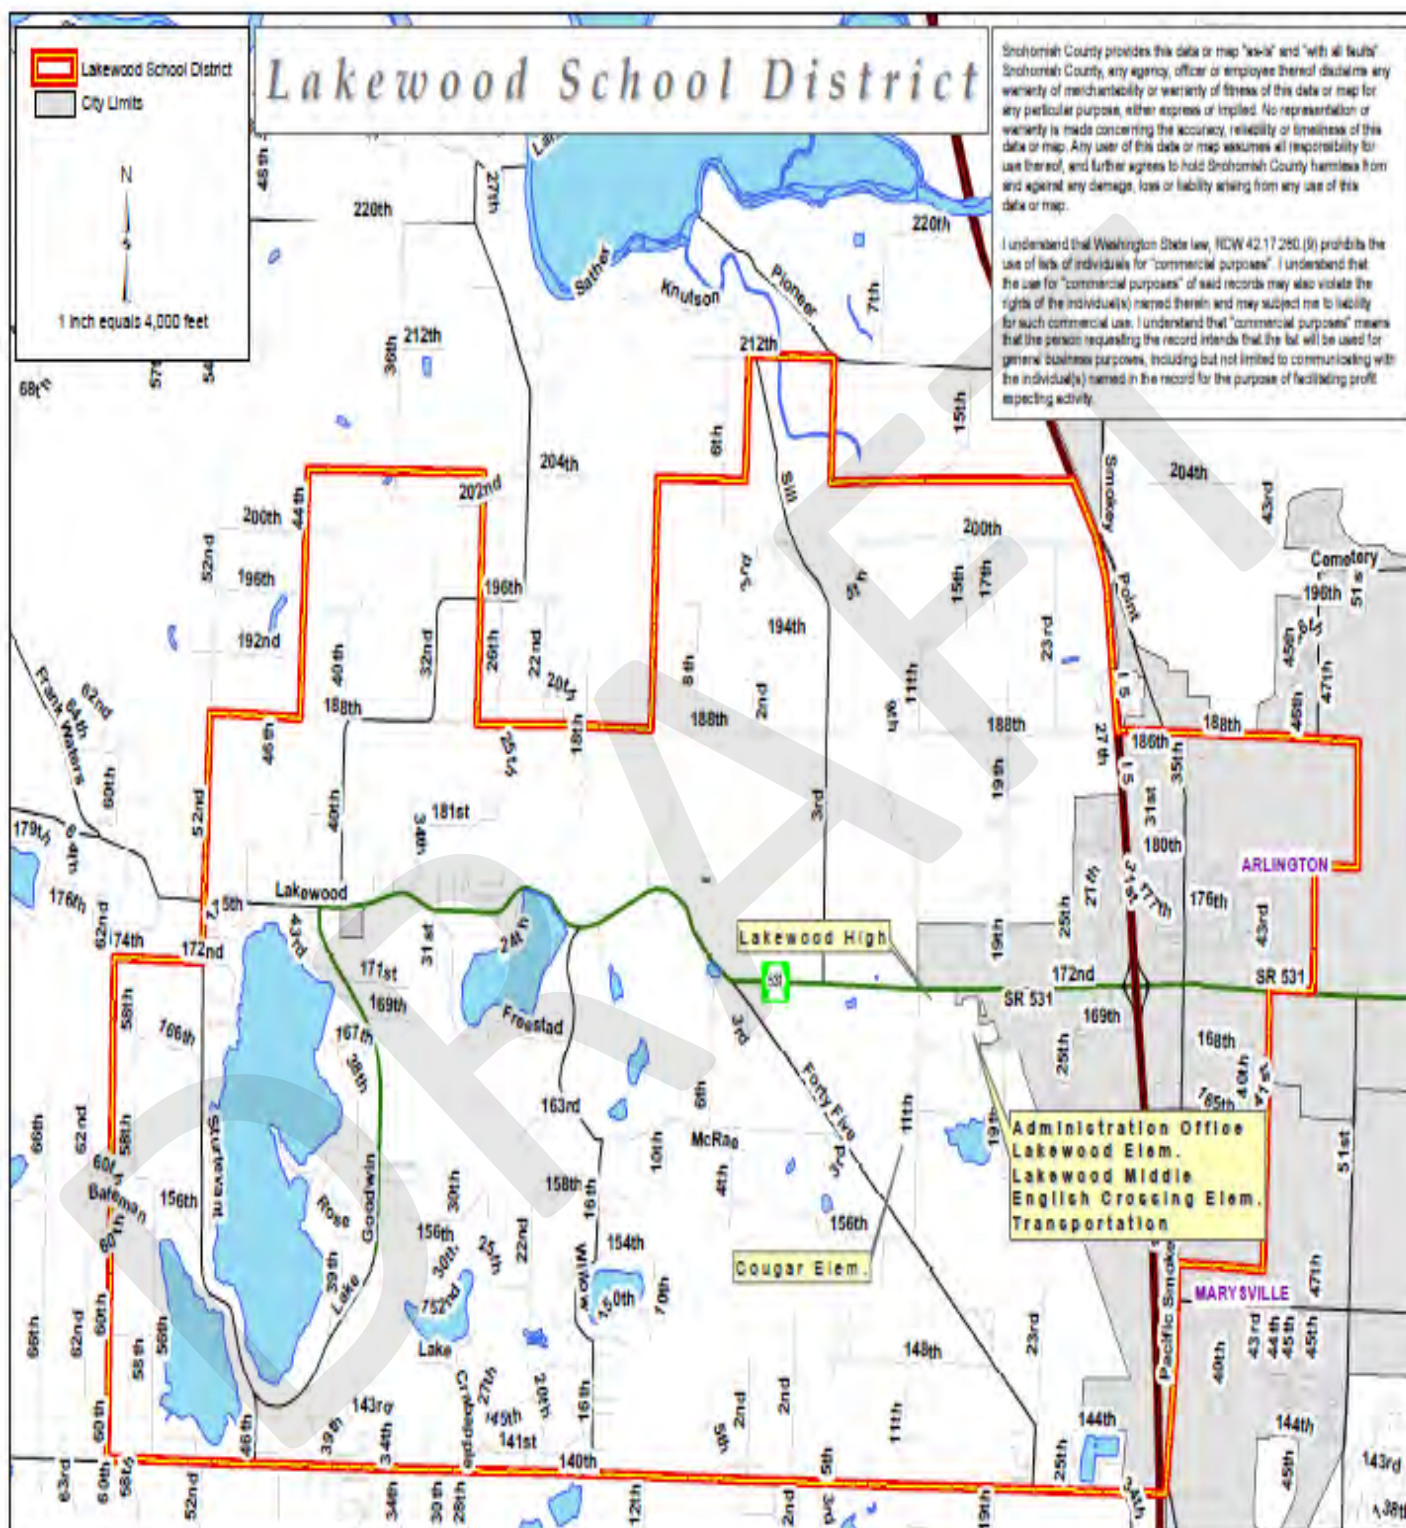

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of the Lakewood School District

The Lakewood School District is located along Interstate 5, north of Marysville, Washington, primarily serving unincorporated Snohomish County and a part of the City of Arlington and the City of Marysville. The District is bordered on the south by the Marysville School District, on the west and north by the Stanwood School District, and on the east by the Arlington School District.

The District serves a student population of 2,574 (October 1, 2021, reported OSPI HC enrollment) with three elementary schools, one middle school, and one high school.

FIGURE 1 MAP OF FACILITIES

SECTION 2 DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables), as well as specific and unique physical structure needs required to meet the needs of students with special needs.

In addition to factors which affect the amount of space required, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional, or special programs such as special education, expanded bilingual education, remediation, migrant education, alcohol and drug education, AIDS education, preschool and daycare programs, computer labs, music programs, and others. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities, and upon planning for future needs.

The educational program standards contained in this CFP reflect the District's implementation of requirements for full-day kindergarten and reduced K-3 class size.

Special programs offered by the District at specific school sites include, but are not limited to:

Lakewood Elementary School (Preschool through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- P – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Early Childhood Education and Assistance Program (ECEAP)
- Developmentally Delayed Preschool Program - Ages 3 to 5
- K-5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- Learning Assistance Program - Remedial Services
- Occupational Therapy Program

English Crossing Elementary School (Kindergarten through 5th Grades)

- K through 5th Grade Special Education Resource Room Program
- Bilingual Education Program
- K – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Developmentally Delayed Preschool Program - Ages 3 to 5
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- Special Education EBD Program

Cougar Creek Elementary School (Kindergarten through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- Speech and Language Disorder Therapy Program
- Learning Assistance Program – Remedial Services (Learning Lab)
- Occupational Therapy Program
- K – 5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- K – 5th Grade Counseling Services
- 3 – 5th Highly Capable/Enrichment Program (serves grades 3-5 district-wide)

Lakewood Middle School (6th through 8th Grades)

- Speech and Language Disorder Therapy Program
- 6th-8th Grade Special Education Resource and Inclusion Program
- 6th-8th Grade Special Education Life Skills Program
- Bilingual Education Program
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- 6th – 8th EBD Program
- 6th – 8th Grade Counseling Services

Lakewood High School

- 9th-12th Grade Special Education Resource Room and Transition Program
- 6th-12th Grade Special Education Life Skills Program
- Bilingual Education Program
- Occupational Therapy Program
- Speech and Language Disorder Program
- 9th – 12th Grade Counseling Program

Variations in student capacity between schools may result from the special or nontraditional programs offered at specific schools. Some students, for example, leave their regular classroom for a short period of time to receive instruction in these special programs. New schools are designed to accommodate many of these programs. However, existing schools often require space

modifications to accommodate special programs, and in some circumstances, these modifications may affect the overall classroom capacities of the buildings.

District educational program standards may change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, use of new technology, and other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards For Elementary Schools

- Class size for grades K – 3rd will not exceed 19 students.
- Class size for grades 4th and 5th will not exceed 24 students.
- All students will be provided library/media services in a school library.
- Special Education for students may be provided in self-contained or specialized classrooms.
- All students will be provided music instruction in a separate classroom.
- All students will have scheduled time in a computer lab. Each classroom will have access to computers and related educational technology.
- Optimum design capacity for new elementary schools is 475 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- All students will be provided physical education instruction in a gym/multipurpose room.

Educational Program Standards For Middle and High Schools

- Class size for middle school grades will not exceed 27 students.
- Class size for high school grades will not exceed 29 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a work space during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. In updating this Capital Facility Plan, a building review of classroom use was conducted in order to reflect the actual classroom utilization in the high school and middle school. Therefore, classroom capacity should be adjusted using a utilization factor of 95% at the middle school and 85% at the high school to reflect the use of classrooms for teacher planning. Special Education for students will be provided in self-contained or specialized classrooms.
- All students will have access to computer labs. Each classroom is equipped with access to computers and related educational-technology.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Counseling Offices
 - Resource Rooms (i.e. computer labs, study rooms)
 - Special Education Classrooms

Program Specific Classrooms (i.e. music, drama, art, physical education, Industrial Arts and Agricultural Sciences).

- Optimum design capacity for new middle schools is 600 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- Optimum design capacity for new high schools is 800 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole. A boundary change or a significant programmatic change would be made by the Board of Directors following appropriate public review and comment. The District may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's minimum level of service ("MLOS") is as follows: on average, K-5 classrooms have no more than 26 students per classroom, 6-8 classrooms have no more than 28 students per classroom, and 9-12 classrooms have no more than 30 students per classroom. The District sets minimum educational service standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. Minimum standards have not been met if, on average using current FTE figures: K-4 classrooms have more than 26 students per classroom, 5-8 classrooms have more than 28 students per classroom, or 9-12 classrooms more than 30 students per classroom. The term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom. The MLOS is not the District's desired or accepted operating standard.

For 2019-20 and 2020-21, the District's compliance with the MLOS was as follows (with MLOS set as applicable for those school years):

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.86	28	26.08	30	22.59

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.17	28	23.11	30	22.88

* The District determines the reported LOS by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations (excludes portables).

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. Facility capacity is based on the space required to accommodate the District's adopted educational program standards. *See* Section 2. Attached as Figure 1 (page 3) is a map showing locations of District facilities.

A. Schools

The District maintains three elementary schools, one middle school, and one high school. Lakewood Elementary School accommodates grades P-5, Cougar Creek Elementary School accommodates grades K-5, and English Crossing Elementary School accommodates grades K-5. Lakewood Middle School serves grades 6-8, and Lakewood High School serves grades 9-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 1.

Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities are not included in Table 1.

**Table 1
School Capacity Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
English Crossing	*	41,430	20	403	1994
Cougar Creek	10**	44,217	22	444	2003
Lakewood	*	45,400	16	323	1958, 1997
TOTAL	*	131,047	58	1,170	

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood Middle	*	62,835	27	670	1971, 1994, 2002, 2022

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood High	*	169,000	34	850	2017

*Note: All facilities are located on one 89-acre campus located at Tax Parcel No. 31053000100300.

**The Cougar Creek site is approximately 22 acres located at 16216 11th Ave NE, Arlington, WA 98223. Note that the presence of critical areas on the site does not allow full utilization at this site.

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses 15 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. A typical relocatable classroom can provide capacity for a full-size class of students. Current use of relocatable classrooms throughout the District is summarized in Table 2. Table 2 includes only those relocatable classrooms used for regular capacity purposes. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly.

Table 2
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatable Classrooms	Interim Capacity
English Crossing	2	40
Cougar Creek	4	80
Lakewood	6	120
SUBTOTAL	12	240

Middle School	Relocatable Classrooms	Interim Capacity
Lakewood Middle	3	78
SUBTOTAL	3	78

High School	Relocatable Classrooms	Interim Capacity
Lakewood High	0	0
SUBTOTAL	0	0

TOTAL	15	318
--------------	-----------	------------

C. Support Facilities

In addition to schools, the District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 3.

Table 3
Support Facility Inventory

Facility	Building Area (Square Feet)
Administration	1,384
Business and Operations	1,152
Storage	2,456
Bus Garage/Maintenance Shop	7,416
Stadium	14,304

The District is also a party to a cooperative agreement for use of the Marysville School District transportation facility (which is owned by the Marysville School District).

D. Land Inventory

The District does not own any sites which are developed for uses other than schools and/or which are leased to other parties.

SECTION 4

STUDENT ENROLLMENT PROJECTIONS

The District's October 1, 2021, reported enrollment was 2,574 HC students (2,517.3 FTE). Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions and demographic trends in the area affect the projection. Monitoring birth rates in Snohomish County and population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projection.

A. Six Year Enrollment Projections

Two enrollment forecasts were conducted for the District: an estimate by the Office of the Superintendent of Public Instruction (OSPI) based upon the cohort survival method; and a modified cohort enrollment forecast prepared by a demographer. The District also estimated enrollment based upon adopted Snohomish County population forecasts ("ratio method").

Based on the cohort survival methodology, a total of 2,685 students are expected to be enrolled in the District by 2027, a slight increase from the October 2021 enrollment levels. Notably, the cohort survival method is not designed to anticipate fluctuations in development patterns. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in the 2020-21 school year. Historically, the cohort method has not proven to be a reliable measure for the Lakewood School District. For example, the cohort projection in 2017 predicted that the District's October 2019 enrollment would be 2,423, about 91 fewer students than the actual October 2019 enrollment figures. The 2021 cohort projections for 2027 show a 4.3% projected increase by the 2027 school year. See Appendix A-1.

Snohomish County provides OFM population-based enrollment projections for the District using OFM population forecasts as adopted by the County. The County provided the District with the estimated total population in the District by year. In 2020, the District's student enrollment constituted approximately 14.58% of the total population in the District. Assuming that between 2022 and 2027, the District's enrollment will continue to constitute 14.58% of the District's total population and using OFM/County data, OFM/County methodology projects a total enrollment of 2,757 students in 2027, or an approximately 7.11% increase. See Appendix A-2.

The District obtained in 2022 an enrollment forecast from a professional demographer, FLO Analytics. Based on this analysis, a total enrollment of 2,791, or 274 additional students, are expected by the 2027-28 school year. This projection is an increase of approximately 10.9% over 2021 enrollment. Growth is projected at all three grade levels. The FLO Analytics forecast utilizes historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-3.

The comparison of OSPI cohort, District projections, and OFM/County projected enrollments is contained in Table 4.

Table 4
Projected Student Enrollment (FTE)
2022-2027

Projection	Oct. 2021*	2022	2023	2024	2025	2026	2027	Change 2020-27	Percent Change 2010-27
OFM/County	2,574	2,604	2,635	2,666	2,696	2,727	2,757	183	7.11%
OSPI Cohort**	2,574	2,572	2,608	2,613	2,627	2,637	2,685	111	4.3%
District***	2,517	2,527	2,580	2,617	2,663	2,709	2,791	274	10.89%

* Actual reported enrollment, October 2021 (headcount for OFM/OSPI; FTE for District)

**Based upon the cohort survival methodology; complete projections located at Appendix A..

***FLO Analytics (2022) using FTE; grade level projections located in Appendix A.

The District is aware of notable pending residential development within the District. Specifically, nearly 1,100 multi-family units are planned for or currently in construction within the District boundaries as well as nearly 500 single family units.

Given the District-specific detailed analysis contained in the FLO Analytics report, the District is relying on the projections in that report for purposes of planning for the District's needs during the six years of this plan period. Future updates to the Plan will continue to revisit enrollment projections and methodologies.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Using OFM/County data as a base, the District projects a 2044 student HC population of 3,512. This is based on the OFM/County data using total population as related to District enrollment.

Projected enrollment by grade span for the year 2044 is provided in Table 5. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 5
Projected Student Enrollment
2044

Grade Span	HC Enrollment – October 2021	Projected Enrollment 2044*
Elementary (K-5)	1,145	1,562
Middle School (6-8)	584	797
High School (9-12)	845	1,153
TOTAL (K-12)	2,574	3,512

*Assumes average percentage per grade span remains constant between 2021 and 2044.

Note: Snohomish County Planning and Development Service provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

The projected available student capacity was determined by subtracting projected FTE student enrollment from permanent school capacity (i.e. excluding portables) for each of the six years in the forecast period (2022-2027).

Capacity needs are expressed in terms of “unhoused students.”

Projected future capacity needs are depicted on Table 6-A and are derived by applying the projected enrollment to the capacity existing in the 2021-22 school year. The method used to define future capacity needs assumes no new construction. For this reason, planned construction projects are not included at this point. This factor, as applicable, is added later (see Table 7).

This table shows actual space needs and the portion of those needs that are “growth related” for the years 2022-2027. Note that this chart can be misleading as it reads out growth-related capacity needs related to recent growth within the District.

Table 6-A*
Additional Capacity Needs***
2021-2027

Grade Span	2021**	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28	Pct. Growth Related
Elementary (K-5)								
Total	0	0	12	40	35	77	80	
Growth Related	--	--	12	40	35	77	80	100%
Middle School (6-8)								
Total	0	0	0	0	5	0	28	
Growth Related	--	--	--	--	5	0	28	100%
High School								
Total	0	0	0	0	0	0	0	
Growth Related	--	--	--	--	--	--	--	--%

*Please refer to Table 7 for capacity and projected enrollment information.

**Actual October 2021 Enrollment

***Additional “Growth Related Capacity Needs” equal the “Total” for each year less “deficiencies” existing as of 2021. Existing deficiencies as of 2021 include capacity needs related to recent growth from new development through that date.

By the end of the six-year forecast period (2027), additional permanent classroom capacity will be needed as follows:

Table 6-B
Unhoused Students

Grade Span	Unhoused Students /Growth Related in Parentheses)
Elementary (K-5)	80/(80)
Middle School (6-8)	28/(28)
High School (9-12)	-(-)
TOTAL UNHOUSED (K-12)	108/(108)

Again, planned construction projects are not included in the analysis in Table 6-B. In addition, it is not the District's policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms is not included in Table 6-B. However, Table 6-C incorporates the District's current relocatable capacity (see Table 2) for purposes of identifying available capacity.

Table 6-C
Unhoused Students – Mitigated with Relocatables

Grade Span	2027 Unhoused Students /Growth Related in (Parentheses)	Relocatable Capacity
Elementary (K-5)	80/(80)	240
Middle School (6-8)	28/(28)	78
High School (9-12)	-(-)	0
Total (K-12)	108(108)	318

Importantly, Table 6-C does not include relocatable adjustments that may be made to meet capacity needs. For example, the relocatable classrooms currently designated to serve elementary school needs could be used to serve high school capacity needs. Therefore, assuming no permanent capacity improvements are made, Table 6-C indicates that the District will have adequate interim capacity with the use of relocatable classrooms to house students during this planning period.

Projected permanent capacity needs are depicted in Table 7. They are derived by applying the District's projected number of students to the projected capacity. Planned improvements by the District through 2027 are included in Table 7 and more fully described in Table 8.

Table 7
Projected Student Capacity
2022-2027

Elementary School Surplus/Deficiency

	Oct 2021*	2022	2023	2024	2025	2026	2027
Existing Capacity	1,170	1,170	1,170	1,170	1,170	1,170	1,170

Surplus (Deficiency)**	51	60	84	90	67	59	6

* Reported October 2021 enrollment

**Does not include portable capacity

See Appendix A for complete breakdown of enrollment projections.

See Table 6-A for a comparison of additional capacity needs due to growth versus existing deficiencies.

Table 7 does not include existing, relocated, or added portable facilities.

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

In March 2000, the voters passed a \$14,258,664 bond issue for school construction and site acquisition. A new elementary school and a middle school addition were funded by that bond measure. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition at Lakewood High School, which opened in the fall of 2017. In the Spring of 2020, the District added a STEM lab and two classrooms at Lakewood Middle School.

Currently, the District is assessing future capacity needs and, at the present time, anticipates adding portable capacity to address short term needs with immediate plans to add portables in the summer of 2022 in the space between Lakewood Middle School and Lakewood Elementary School to add K-5 interim capacity at LES. Based upon current needs, the District anticipates that it may need to consider the following acquisitions and/or improvements within the six years of this Plan. The District is not planning for permanent capacity improvements as a part of this CFP update. Future updates to this CFP will identify updated plans and funding sources.

Projects Adding Permanent/Temporary Capacity:

- Acquisition and siting of portable facilities to accommodate growth needs.

Non-Capacity Adding Projects:

- None planned

Other:

- Land acquisition for future sites.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, State School Construction Assistance funds, and impact fees. Where applicable, the potential funding sources are discussed below.

B. Financing for Planned Improvements

1. General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes. In March 2000, District voters approved a \$14,258,664 bond issue for school construction and site acquisition, which included funding of Cougar Creek Elementary School. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition, at Lakewood High School. The District does not have current plans for a future bond or capital levy proposal.

2. State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is eligible for State School Construction Assistance Program (SCAP) funds for certain projects at the 58.28% funding percentage level. The District does not anticipate being eligible for SCAP funds for the projects planned in this CFP.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

4. Six Year Financing Plan

The Six-Year Financing Plan shown in Table 8 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. Where applicable, potential financing components include a bond or capital levy, impact fees, and State School Construction Assistance Program funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 8
Capital Facilities Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/ Other Local	State Funds	Impact Fees

Elementary										
Middle School										
High School										

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development. A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student factor methodology is contained in Appendix B. As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do

not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 6-A. When calculating impact fees, the District uses the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 8 for a complete identification of funding sources.

The District is not requesting school impact fees as a part of this Capital Facilities Plan update.

C. Proposed Lakewood School District Impact Fee Schedule

The District does not have permanent capacity projects planned as a part of the 2022 CFP. See discussion in Section 6 above. As such, the District is not requesting the collection of school impact fees as a part of this Capital Facilities Plan. The District expects that future project planning and updates to the Capital Facilities Plan will result in a renewed request for impact fees as a part of a future CFP.

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: John Poolman
Executive Director of Finance
Lakewood School District

Date: April 4, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F1867.01.004

Re: **Student Generation Report— Lakewood School District**

At the request of the Lakewood School District (District/LSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent single-family and multifamily construction (2017–2021) within the district. This document details the methodology FLO used to create the SGRs for LSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential construction developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of three mobile home sites that have been present since at least 2010. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 127 SF units and 6 MF buildings completed between 2017 and 2021 (SF). While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (115 units), other SF use codes were also constructed, including construction classified as 2 Single Family Residences (two detached residences per parcel) and manufactured homes (owned and leased). MF development ranged from 15–20 unit residences to 301+ unit construction. About 87 percent (734 units) of these new MF units were 2+ BR units, while the remainder (114 units) were 0–1 BR units. While considered MF buildings, Cedar Pointe Apartments (Senior Facility) and Holman Recovery Center were removed from the analysis.

R:\F1867.01 Lakewood School District\Document\004_2022.04.04 Student Generation Report\Lakewood SD Student Generation Report 2022.docx

John Poolman
April 4, 2022Project No. F1867.01.004
Page 2

All students (grades kindergarten [K] through 12) in the October 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 127 SF units were compared to the 2,602 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	2	0.016
1	5	0.039
2	6	0.047
3	1	0.008
4	1	0.008
5	1	0.008
6	5	0.039
7	3	0.024
8	2	0.016
9	2	0.016

6–8	10	0.079
9–12	8	0.063
K–12	34	0.263

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

John Poolman
April 4, 2022

Project No. F1867.01.004
Page 3

FLO reached out to the building management at the six projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Villas at Arlington, Trailside at the Lodge, and Twin Lakes Landing. Despite numerous attempts, no bedroom information could be received from The Landing at Smokey Pointe for the two students living at units within this building. Based on trends within and surrounding the district, we assumed both students reside within a 2+ BR unit. No students reside at Affinity at Arlington and the unnamed garden style apartment.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 114 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

6–8	0	0.000
9–12	0	0.000
K–12	3	0.026

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 734 2+ BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

INTRODUCTION

A. Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Lakewood School District (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”) and the cities of Arlington and Marysville with a description of facilities needed to accommodate projected student enrollment and a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, adopted County Policy, the Snohomish County Ordinance Nos. 97-095 and 99-107, the City of Arlington Ordinance No. 1263, and the City of Marysville Ordinance Nos. 2306 and 2213, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high school).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- As relevant, a calculation of impact fees to be assessed and supporting data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state,

county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.

- The methodology used to calculate impact fees also complies with the criteria and the formulas established by the County.

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

B. Overview of the Lakewood School District

The Lakewood School District is located along Interstate 5, north of Marysville, Washington, primarily serving unincorporated Snohomish County and a part of the City of Arlington and the City of Marysville. The District is bordered on the south by the Marysville School District, on the west and north by the Stanwood School District, and on the east by the Arlington School District.

The District serves a student population of 2,574 (October 1, 2021, reported OSPI HC enrollment) with three elementary schools, one middle school, and one high school.

**FIGURE 1
MAP OF FACILITIES**

SECTION 2

DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables), as well as specific and unique physical structure needs required to meet the needs of students with special needs.

In addition to factors which affect the amount of space required, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional, or special programs such as special education, expanded bilingual education, remediation, migrant education, alcohol and drug education, AIDS education, preschool and daycare programs, computer labs, music programs, and others. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities, and upon planning for future needs.

The educational program standards contained in this CFP reflect the District's implementation of requirements for full-day kindergarten and reduced K-3 class size.

Special programs offered by the District at specific school sites include, but are not limited to:

Lakewood Elementary School (Preschool through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- P – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Early Childhood Education and Assistance Program (ECEAP)
- Developmentally Delayed Preschool Program - Ages 3 to 5
- K-5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- Learning Assistance Program - Remedial Services
- Occupational Therapy Program

English Crossing Elementary School (Kindergarten through 5th Grades)

- K through 5th Grade Special Education Resource Room Program
- Bilingual Education Program
- K – 5th Grade Counseling Services
- Speech and Language Disorder Therapy Program
- Developmentally Delayed Preschool Program - Ages 3 to 5
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- Special Education EBD Program

Cougar Creek Elementary School (Kindergarten through 5th Grades)

- Bilingual Education Program
- Title I Remedial Services Program
- Speech and Language Disorder Therapy Program
- Learning Assistance Program – Remedial Services (Learning Lab)
- Occupational Therapy Program
- K – 5th Grade Special Education Resource Room Program
- K – 5th Grade Special Education Life Skills Program
- K – 5th Grade Counseling Services
- 3 – 5th Highly Capable/Enrichment Program (serves grades 3-5 district-wide)

Lakewood Middle School (6th through 8th Grades)

- Speech and Language Disorder Therapy Program
- 6th-8th Grade Special Education Resource and Inclusion Program
- 6th-8th Grade Special Education Life Skills Program
- Bilingual Education Program
- Learning Assistance Program - Tutorial Services
- Occupational Therapy Program
- 6th – 8th EBD Program
- 6th – 8th Grade Counseling Services

Lakewood High School

- 9th-12th Grade Special Education Resource Room and Transition Program
- 6th-12th Grade Special Education Life Skills Program
- Bilingual Education Program
- Occupational Therapy Program
- Speech and Language Disorder Program
- 9th – 12th Grade Counseling Program

Variations in student capacity between schools may result from the special or nontraditional programs offered at specific schools. Some students, for example, leave their regular classroom for a short period of time to receive instruction in these special programs. New schools are designed to accommodate many of these programs. However, existing schools often require space

modifications to accommodate special programs, and in some circumstances, these modifications may affect the overall classroom capacities of the buildings.

District educational program standards may change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, use of new technology, and other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards For Elementary Schools

- Class size for grades K – 3rd will not exceed 19 students.
- Class size for grades 4th and 5th will not exceed 24 students.
- All students will be provided library/media services in a school library.
- Special Education for students may be provided in self-contained or specialized classrooms.
- All students will be provided music instruction in a separate classroom.
- All students will have scheduled time in a computer lab. Each classroom will have access to computers and related educational technology.
- Optimum design capacity for new elementary schools is 475 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- All students will be provided physical education instruction in a gym/multipurpose room.

Educational Program Standards For Middle and High Schools

- Class size for middle school grades will not exceed 27 students.
- Class size for high school grades will not exceed 29 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a work space during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. In updating this Capital Facility Plan, a building review of classroom use was conducted in order to reflect the actual classroom utilization in the high school and middle school. Therefore, classroom capacity should be adjusted using a utilization factor of 95% at the middle school and 85% at the high school to reflect the use of classrooms for teacher planning. Special Education for students will be provided in self-contained or specialized classrooms.
- All students will have access to computer labs. Each classroom is equipped with access to computers and related educational-technology.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Counseling Offices
 - Resource Rooms (i.e. computer labs, study rooms)
 - Special Education Classrooms

Program Specific Classrooms (i.e. music, drama, art, physical education, Industrial Arts and Agricultural Sciences).

- Optimum design capacity for new middle schools is 600 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- Optimum design capacity for new high schools is 800 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole. A boundary change or a significant programmatic change would be made by the Board of Directors following appropriate public review and comment. The District may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The District's minimum level of service ("MLOS") is as follows: on average, K-5 classrooms have no more than 26 students per classroom, 6-8 classrooms have no more than 28 students per classroom, and 9-12 classrooms have no more than 30 students per classroom. The District sets minimum educational service standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. Minimum standards have not been met if, on average using current FTE figures: K-4 classrooms have more than 26 students per classroom, 5-8 classrooms have more than 28 students per classroom, or 9-12 classrooms more than 30 students per classroom. The term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom. The MLOS is not the District's desired or accepted operating standard.

For 2019-20 and 2020-21, the District's compliance with the MLOS was as follows (with MLOS set as applicable for those school years):

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.86	28	26.08	30	22.59

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	26	18.17	28	23.11	30	22.88

* The District determines the reported LOS by adding the number of students in regular classrooms at each grade level and dividing that number by the number of teaching stations (excludes portables).

SECTION 3 CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. Facility capacity is based on the space required to accommodate the District's adopted educational program standards. *See* Section 2. Attached as Figure 1 (page 3) is a map showing locations of District facilities.

A. Schools

The District maintains three elementary schools, one middle school, and one high school. Lakewood Elementary School accommodates grades P-5, Cougar Creek Elementary School accommodates grades K-5, and English Crossing Elementary School accommodates grades K-5. Lakewood Middle School serves grades 6-8, and Lakewood High School serves grades 9-12.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 1.

Relocatable classrooms are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities are not included in Table 1.

**Table 1
School Capacity Inventory**

Elementary School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
English Crossing	*	41,430	20	403	1994
Cougar Creek	10**	44,217	22	444	2003
Lakewood	*	45,400	16	323	1958, 1997
TOTAL	*	131,047	58	1,170	

Middle School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood Middle	*	62,835	27	670	1971, 1994, 2002, 2022

High School	Site Size (Acres)	Building Area (Square Feet)	Teaching Stations	Permanent Capacity	Year Built or Remodeled
Lakewood High	*	169,000	34	850	2017

*Note: All facilities are located on one 89-acre campus located at Tax Parcel No. 31053000100300.

**The Cougar Creek site is approximately 22 acres located at 16216 11th Ave NE, Arlington, WA 98223. Note that the presence of critical areas on the site does not allow full utilization at this site.

B. Relocatable Classrooms

Relocatable classrooms are used on an interim basis to house students until funding can be secured to construct permanent classrooms. The District currently uses 15 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. A typical relocatable classroom can provide capacity for a full-size class of students. Current use of relocatable classrooms throughout the District is summarized in Table 2. Table 2 includes only those relocatable classrooms used for regular capacity purposes. The District's relocatable classrooms have adequate useful remaining life and are evaluated regularly.

Table 2
Relocatable Classroom (Portable) Inventory

Elementary School	Relocatable Classrooms	Interim Capacity
English Crossing	2	40
Cougar Creek	4	80
Lakewood	6	120
SUBTOTAL	12	240

Middle School	Relocatable Classrooms	Interim Capacity
Lakewood Middle	3	78
SUBTOTAL	3	78

High School	Relocatable Classrooms	Interim Capacity
Lakewood High	0	0
SUBTOTAL	0	0

TOTAL	15	318
--------------	-----------	------------

C. Support Facilities

In addition to schools, the District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 3.

Table 3
Support Facility Inventory

Facility	Building Area (Square Feet)
Administration	1,384
Business and Operations	1,152
Storage	2,456
Bus Garage/Maintenance Shop	7,416
Stadium	14,304

The District is also a party to a cooperative agreement for use of the Marysville School District transportation facility (which is owned by the Marysville School District).

D. Land Inventory

The District does not own any sites which are developed for uses other than schools and/or which are leased to other parties.

SECTION 4 STUDENT ENROLLMENT PROJECTIONS

The District's October 1, 2021, reported enrollment was 2,574 HC students (2,517.3 FTE). Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions and demographic trends in the area affect the projection. Monitoring birth rates in Snohomish County and population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projection.

A. Six Year Enrollment Projections

Two enrollment forecasts were conducted for the District: an estimate by the Office of the Superintendent of Public Instruction (OSPI) based upon the cohort survival method; and a modified cohort enrollment forecast prepared by a demographer. The District also estimated enrollment based upon adopted Snohomish County population forecasts ("ratio method").

Based on the cohort survival methodology, a total of 2,685 students are expected to be enrolled in the District by 2027, a slight increase from the October 2021 enrollment levels. Notably, the cohort survival method is not designed to anticipate fluctuations in development patterns. This deficiency is exacerbated by enrollment anomalies that occurred as a result of the COVID pandemic, particularly in the 2020-21 school year. Historically, the cohort method has not proven to be a reliable measure for the Lakewood School District. For example, the cohort projection in 2017 predicted that the District's October 2019 enrollment would be 2,423, about 91 fewer students than the actual October 2019 enrollment figures. The 2021 cohort projections for 2027 show a 4.3% projected increase by the 2027 school year. See Appendix A-1.

Snohomish County provides OFM population-based enrollment projections for the District using OFM population forecasts as adopted by the County. The County provided the District with the estimated total population in the District by year. In 2020, the District's student enrollment constituted approximately 14.58% of the total population in the District. Assuming that between 2022 and 2027, the District's enrollment will continue to constitute 14.58% of the District's total population and using OFM/County data, OFM/County methodology projects a total enrollment of 2,757 students in 2027, or an approximately 7.11% increase. See Appendix A-2.

The District obtained in 2022 an enrollment forecast from a professional demographer, FLO Analytics. Based on this analysis, a total enrollment of 2,791, or 274 additional students, are expected by the 2027-28 school year. This projection is an increase of approximately 10.9% over 2021 enrollment. Growth is projected at all three grade levels. The FLO Analytics forecast utilizes historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the cities of Arlington and Marysville, census data, OFM forecasts, and Washington State Department of Health birth data. It also considers the impacts of the pandemic on enrollment. The detailed FLO Analytics forecast report is on file with the District and a grade level analysis is included in Appendix A-3.

The comparison of OSPI cohort, District projections, and OFM/County projected enrollments is contained in Table 4.

Table 4
Projected Student Enrollment (FTE)
2022-2027

Projection	Oct. 2021*	2022	2023	2024	2025	2026	2027	Change 2020-27	Percent Change 2010-27
OFM/County	2,574	2,604	2,635	2,666	2,696	2,727	2,757	183	7.11%
OSPI Cohort**	2,574	2,572	2,608	2,613	2,627	2,637	2,685	111	4.3%
District***	2,517	2,527	2,580	2,617	2,663	2,709	2,791	274	10.89%

* Actual reported enrollment, October 2021 (headcount for OFM/OSPI; FTE for District)

**Based upon the cohort survival methodology; complete projections located at Appendix A..

***FLO Analytics (2022) using FTE; grade level projections located in Appendix A.

The District is aware of notable pending residential development within the District. Specifically, nearly 1,100 multi-family units are planned for or currently in construction within the District boundaries as well as nearly 500 single family units.

Given the District-specific detailed analysis contained in the FLO Analytics report, the District is relying on the projections in that report for purposes of planning for the District's needs during the six years of this plan period. Future updates to the Plan will continue to revisit enrollment projections and methodologies.

B. 2035 Enrollment Projections

Student enrollment projections beyond 2027 are highly speculative. Using OFM/County data as a base, the District projects a 2044 student HC population of 3,512. This is based on the OFM/County data using total population as related to District enrollment.

Projected enrollment by grade span for the year 2044 is provided in Table 5. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 5
Projected Student Enrollment
2044

Grade Span	HC Enrollment – October 2021	Projected Enrollment 2044*
Elementary (K-5)	1,145	1,562
Middle School (6-8)	584	797
High School (9-12)	845	1,153
TOTAL (K-12)	2,574	3,512

*Assumes average percentage per grade span remains constant between 2021 and 2044.

Note: Snohomish County Planning and Development Service provided the underlying data for the 2044 projections.

SECTION 5 CAPITAL FACILITIES NEEDS

The projected available student capacity was determined by subtracting projected FTE student enrollment from permanent school capacity (i.e. excluding portables) for each of the six years in the forecast period (2022-2027).

Capacity needs are expressed in terms of “unhoused students.”

Projected future capacity needs are depicted on Table 6-A and are derived by applying the projected enrollment to the capacity existing in the 2021-22 school year. The method used to define future capacity needs assumes no new construction. For this reason, planned construction projects are not included at this point. This factor, as applicable, is added later (see Table 7).

This table shows actual space needs and the portion of those needs that are “growth related” for the years 2022-2027. Note that this chart can be misleading as it reads out growth-related capacity needs related to recent growth within the District.

Table 6-A*
Additional Capacity Needs***
2021-2027

Grade Span	2021**	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28	Pct. Growth Related
Elementary (K-5)								
Total	0	0	12	40	35	77	80	
Growth Related	--	--	12	40	35	77	80	100%
Middle School (6-8)								
Total	0	0	0	0	5	0	28	
Growth Related	--	--	--	--	5	0	28	100%
High School								
Total	0	0	0	0	0	0	0	
Growth Related	--	--	--	--	--	--	--	--%

*Please refer to Table 7 for capacity and projected enrollment information.

**Actual October 2021 Enrollment

***Additional “Growth Related Capacity Needs” equal the “Total” for each year less “deficiencies” existing as of 2021. Existing deficiencies as of 2021 include capacity needs related to recent growth from new development through that date.

By the end of the six-year forecast period (2027), additional permanent classroom capacity will be needed as follows:

Table 6-B
Unhoused Students

Grade Span	Unhoused Students /Growth Related in Parentheses)
Elementary (K-5)	80/(80)
Middle School (6-8)	28/(28)
High School (9-12)	-(-)
TOTAL UNHOUSED (K-12)	108/(108)

Again, planned construction projects are not included in the analysis in Table 6-B. In addition, it is not the District's policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms is not included in Table 6-B. However, Table 6-C incorporates the District's current relocatable capacity (see Table 2) for purposes of identifying available capacity.

Table 6-C
Unhoused Students – Mitigated with Relocatables

Grade Span	2027 Unhoused Students /Growth Related in (Parentheses)	Relocatable Capacity
Elementary (K-5)	80/(80)	240
Middle School (6-8)	28/(28)	78
High School (9-12)	-(-)	0
Total (K-12)	108(108)	318

Importantly, Table 6-C does not include relocatable adjustments that may be made to meet capacity needs. For example, the relocatable classrooms currently designated to serve elementary school needs could be used to serve high school capacity needs. Therefore, assuming no permanent capacity improvements are made, Table 6-C indicates that the District will have adequate interim capacity with the use of relocatable classrooms to house students during this planning period.

Projected permanent capacity needs are depicted in Table 7. They are derived by applying the District's projected number of students to the projected capacity. Planned improvements by the District through 2027 are included in Table 7 and more fully described in Table 8.

Table 7
Projected Student Capacity
2022-2027

Elementary School Surplus/Deficiency

	Oct 2021*	2022	2023	2024	2025	2026	2027

Surplus (Deficiency)**	51	60	84	90	67	50	7

* Reported October 2021 enrollment

**Does not include portable capacity

See Appendix A for complete breakdown of enrollment projections.

See Table 6-A for a comparison of additional capacity needs due to growth versus existing deficiencies.

Table 7 does not include existing, relocated, or added portable facilities.

SECTION 6 CAPITAL FACILITIES FINANCING PLAN

A. Planned Improvements

In March 2000, the voters passed a \$14,258,664 bond issue for school construction and site acquisition. A new elementary school and a middle school addition were funded by that bond measure. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition at Lakewood High School, which opened in the fall of 2017. In the Spring of 2020, the District added a STEM lab and two classrooms at Lakewood Middle School.

Currently, the District is assessing future capacity needs and, at the present time, anticipates adding portable capacity to address short term needs with immediate plans to add portables in the summer of 2022 in the space between Lakewood Middle School and Lakewood Elementary School to add K-5 interim capacity at LES. Based upon current needs, the District anticipates that it may need to consider the following acquisitions and/or improvements within the six years of this Plan. The District is not planning for permanent capacity improvements as a part of this CFP update. Future updates to this CFP will identify updated plans and funding sources.

Projects Adding Permanent/Temporary Capacity:

- Acquisition and siting of portable facilities to accommodate growth needs.

Non-Capacity Adding Projects:

- None planned

Other:

- Land acquisition for future sites.

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, State School Construction Assistance funds, and impact fees. Where applicable, the potential funding sources are discussed below.

B. Financing for Planned Improvements

1. General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes. In March 2000, District voters approved a \$14,258,664 bond issue for school construction and site acquisition, which included funding of Cougar Creek Elementary School. In April 2014, the District's voters approved a \$66,800,000 bond measure to fund improvements, including a capacity addition, at Lakewood High School. The District does not have current plans for a future bond or capital levy proposal.

2. State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is eligible for State School Construction Assistance Program (SCAP) funds for certain projects at the 58.28% funding percentage level. The District does not anticipate being eligible for SCAP funds for the projects planned in this CFP.

3. Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

4. Six Year Financing Plan

The Six-Year Financing Plan shown in Table 8 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. Where applicable, potential financing components include a bond or capital levy, impact fees, and State School Construction Assistance Program funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

Table 8
Capital Facilities Plan

Improvements Adding Permanent Capacity (Costs in Millions)

Project	2022	2023	2024	2025	2026	2027	Total Cost	Bonds/ Levy/ Other Local	State Funds	Impact Fees

Elementary										
Middle School										
High School										

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

A. School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

B. Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development. A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student factor methodology is contained in Appendix B. As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit. The costs of projects that do

not add capacity are not included in the impact fee calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs, as demonstrated in Table 6-A. When calculating impact fees, the District uses the full project costs in the fee formula. Furthermore, impact fees will not be used to address existing deficiencies. See Table 8 for a complete identification of funding sources.

The District is not requesting school impact fees as a part of this Capital Facilities Plan update.

C. Proposed Lakewood School District Impact Fee Schedule

The District does not have permanent capacity projects planned as a part of the 2022 CFP. See discussion in Section 6 above. As such, the District is not requesting the collection of school impact fees as a part of this Capital Facilities Plan. The District expects that future project planning and updates to the Capital Facilities Plan will result in a renewed request for impact fees as a part of a future CFP.

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: John Poolman
Executive Director of Finance
Lakewood School District

Date: April 4, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F1867.01.004

Re: **Student Generation Report— Lakewood School District**

At the request of the Lakewood School District (District/LSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent single-family and multifamily construction (2017–2021) within the district. This document details the methodology FLO used to create the SGRs for LSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of three residential construction developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of three mobile home sites that have been present since at least 2010. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 127 SF units and 6 MF buildings completed between 2017 and 2021 (SF). While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (115 units), other SF use codes were also constructed, including construction classified as 2 Single Family Residences (two detached residences per parcel) and manufactured homes (owned and leased). MF development ranged from 15–20 unit residences to 301+ unit construction. About 87 percent (734 units) of these new MF units were 2+ BR units, while the remainder (114 units) were 0–1 BR units. While considered MF buildings, Cedar Pointe Apartments (Senior Facility) and Holman Recovery Center were removed from the analysis.

R:\F1867.01 Lakewood School District\Document\004_2022.04.04 Student Generation Report\Lakewood SD Student Generation Report 2022.docx

John Poolman
April 4, 2022

Project No. F1867.01.004
Page 2

All students (grades kindergarten [K] through 12) in the October 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 127 SF units were compared to the 2,602 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	2	0.016
1	5	0.039
2	6	0.047
3	1	0.008
4	1	0.008
5	1	0.008
6	5	0.039
7	3	0.024
8	2	0.016

6–8	10	0.079
9–12	8	0.063
K–12	34	0.263

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

John Poolman
April 4, 2022

Project No. F1867.01.004
Page 3

FLO reached out to the building management at the six projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Villas at Arlington, Trailside at the Lodge, and Twin Lakes Landing. Despite numerous attempts, no bedroom information could be received from The Landing at Smokey Pointe for the two students living at units within this building. Based on trends within and surrounding the district, we assumed both students reside within a 2+ BR unit. No students reside at Affinity at Arlington and the unnamed garden style apartment.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 114 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

6–8	0	0.000
9–12	0	0.000
K–12	3	0.026

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 734 2+ BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

2022 Northshore School District Map

Introduction

Section 1

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act outlines thirteen broad goals including the adequate provision of necessary public facilities and services. Public schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student population in their districts.

The Northshore School District (NSD/District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act, the Codes of King and Snohomish Counties, and the cities of Bothell, Kenmore, and Woodinville. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period 2022-2028. It also provides longer-term enrollment projections. The role of impact fees in funding school construction is addressed in **Section 7** of this report.

The District updates its Capital Facilities Plan on an annual basis. The most recent update previous to this version was adopted by the Board of Directors in June 2021.

Summary

NSD enrollment has grown by 1,134 students between 2016 and 2021, with an average growth rate of 1.15%. As a comparison, for the years 2015 to 2020, District enrollment grew by 1,740 students, with an average growth rate of 1.65%. Although growth is still forecast for the district, the impact of the global pandemic has been to slow it down. In October of 2021, the District's enrollment fell by 1.2% primarily as a result of the pandemic and its effects on in-school instruction. We expect fall of 2022-23 enrollment to start to return to pre-pandemic levels and thereafter increase to reflect continued residential development within the District. Enrollment growth from new development in the northern, central, and southern service areas of the District continues at a steady pace.

With the impact of the pandemic, there are questions about future growth in NSD and whether or not it will continue at a rate at or above forecasts, or if growth will begin to stabilize. The sale of existing homes continues to be strong, with over 2,800 existing homes sold in 2020-21, an increase of over 17% from 2019-20. There also continues to be strong growth in new townhome and multi-family projects that could produce enrollment gains. Recent figures allow us to segregate how many new students are generated from townhomes and to calculate a separate impact fee for those jurisdictions that have a separate townhome fee category. In Spring of 2020, approximately 13 students were generated for every 100 townhomes. As of Spring 2022, 38 students are generated per 100 townhomes. See **Appendix A**.

Growth in NSD has largely been accommodated in recent years through the construction of new

capacity, limiting waivers at most schools, converting special-use portables and non-classroom spaces into classroom space, adjusting boundaries, and adding portable classrooms. The 2022 bond projects, approved by our voters in February 2022, will provide for permanent capacity additions at all grade levels, as further detailed in this CFP.

Overview of the Northshore School District

The Northshore School District spans 60 square-miles and primarily serves five jurisdictions: King County, Snohomish County, the City of Bothell, the City of Kenmore, and the City of Woodinville. There are some addresses located in the cities of Brier, Kirkland and Redmond, but they are either in areas not expected to experience any new residential development or in very small areas with previously developed residential areas. For the purposes of the District's CFP and long-term projections, those areas are considered de minimis impacts on NSD's grade bands. The King-Snohomish County line divides NSD such that roughly two-thirds of the District's is in King County and one-third in Snohomish County. According to the 2020 Census, the District has a total population of approximately 147,920. The Snohomish County portion of the district population was 63,086. The King County portion of the District population was 84,834.

The District currently operates twenty elementary schools, six middle schools, and four comprehensive high schools. NSD also has one choice high school (Innovation Lab High School), one alternative high school (Secondary Academy for Success), a hybrid combination of choice school with high levels of parent involvement (Northshore Networks), a home school program, (Northshore Family Partnership Program), a virtual learning school (Northshore Virtual Program) and an early childhood center (Sorenson Early Childhood Center). The current grade configuration is K-5, 6-8, and 9-12.

The Urban Growth Area boundary (UGA) divides NSD, creating capacity utilization challenges. As new residential development continues to occur even at more moderate rates, land for potential new school sites is scarce. King County does not allow for school siting outside the UGA, but Snohomish County does provide for school siting via a Conditional Use Permit (CUP) process.

The District participates in regular conversations regarding school facilities planning with jurisdictions in King County pursuant to regular meetings held to comply with Policy PF-22 (formerly PF-19A) of the King County Countywide Planning Policies. Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. NSD appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Student Enrollment Trends and Forecasts

Section 2

Background

Elementary enrollment in NSD has grown steadily in recent years, with a slight dip in 2020 and 2021 reflecting the global pandemic. Growth increases in recent years are a result of larger birth cohorts and a consistent increase in new residential development. This wave of elementary enrollment growth is beginning to move into the middle and high school grades and is anticipated to continue over the next 10 years. At the same time, elementary enrollment is projected to grow within and beyond the next 5 years.

Similar to past years, this year's forecasts consider regional and local trends in population growth, birth rates, and housing development, analyzing corresponding projections down to the school feeder pattern level. Growth rates were adjusted based on permit information specific to those respective areas. The resulting trends were used to further refine the projection methodology for enrollment forecasts. The following section describes in more detail the assumptions used to develop the forecast and compares the result of this projection to other available methodologies.

While new single family home construction and sales within NSD are continuing to slow, there is a marked increase in the development of townhomes and continued strong development of apartments and condominiums. The new townhome developments include units with 3 bedrooms or more. From a student generation perspective, we are seeing enrollment numbers affected, with increases in the number of students generated from townhomes that have completed construction, been sold, and become occupied.

As of December 2021, development data shows 887 single family homes and 3,537 multi-family units in the development pipeline within the District. It is significant to note that this data excludes short plat development. As larger tracts of land become more rare for developers to acquire within NSD, there is a trend towards more short plats as infill lots are purchased. The increasing number of short plats may impact enrollment, increasing what is forecast. In addition, if future adjustments are made to the UGA in Snohomish County, larger lots will once again become available to developers with the potential of increased NSD student enrollment.

Methodology

Numerous methodologies are available for projecting long-term enrollments. The most common method is known as the cohort survival method. This method tracks groups of students through the system and adjusts the population to account for the average year-to-year growth. For example, this year's fourth grade is adjusted based on the average enrollment trend of the past in order to estimate next year's fifth grade enrollment. This calculation method considers the past five years' trends to determine the average adjustment factor for each grade, or cohort. The method works well for all grades except kindergarten, for which there is no previous year data. For

kindergarten, two methodologies are generally used:

- A linear extrapolation from the previous five years of kindergarten enrollment, assuming that there is a trend;
- Or, alternatively, a comparison of the kindergarten enrollment to births from five years prior can be used to calculate a “birth-to-K” ratio. For example, kindergarten enrollment in 2021 is divided by the total births in King and Snohomish counties in 2016 to produce a “birth-to-K” ratio. The average ratio for the last five years can then be applied to births in subsequent years to estimate kindergarten enrollment.

OSPI uses the cohort survival method to predict enrollment for all school districts in the state for the limited purpose of the School Construction Assistance Program. The cohort survival method generally works well for districts that have a consistent trend of gradual increases or declines in enrollment. It is less reliable in districts where spikes in demographic trends (especially a marked increase or decrease in new housing) can lead to dramatic swings in enrollment from one year to the next. In addition, the use of the linear extrapolation method at the kindergarten level can result in a distorted trend since it does not consider changes in birth rate trends. The impact of COVID on enrollment has contributed to the cohort survival method being unreliable. This may continue for several years.

NSD works with professional demographers to combine the cohort survival methodology with other information about births, housing, regional population trends, mobility, and even trends in service area and private school enrollment. This modified cohort survival methodology provides a more accurate forecast. **Table 2.1** is a forecast of enrollment based on this model.

Mid-Range Enrollment Forecast

Table 2.1

Grade	Actual	Projections					
	21/22	22/23	23/24	24/25	25/26	26/27	27/28
K	1,622	1,636	1,602	1,586	1,567	1,531	1,572
1	1,603	1,743	1,807	1,735	1,726	1,710	1,671
2	1,751	1,658	1,818	1,866	1,792	1,780	1,763
3	1,776	1,746	1,674	1,836	1,894	1,815	1,803
4	1,733	1,784	1,772	1,699	1,873	1,928	1,847
5	1,727	1,731	1,795	1,784	1,719	1,891	1,947
6	1,791	1,729	1,757	1,807	1,810	1,734	1,907
7	1,745	1,801	1,760	1,773	1,825	1,831	1,754
8	1,786	1,751	1,795	1,763	1,777	1,832	1,838
9	1,800	1,843	1,775	1,829	1,797	1,814	1,870
10	1,850	1,792	1,836	1,776	1,831	1,802	1,820
11	1,653	1,734	1,689	1,740	1,684	1,739	1,711
12	1,582	1,605	1,692	1,657	1,706	1,654	1,709
Total	22,419	22,553	22,772	22,551	22,999	23,061	23,212
K - 5	10,212	10,298	10,468	10,506	10,571	10,655	10,603
6 - 8	5,322	5,281	5,312	5,343	5,412	5,397	5,499
9 - 12	6,885	6,974	6,692	7,002	7,018	7,009	7,110

The modified cohort survival methodology in **Table 2.1** shows continued enrollment increases within the District through the six-year planning period. The methodology uses a “mid-range” projection. In total, the projected K-12 increase in enrollment is 793 students over the six-year period. The District’s enrollment projections were updated in February 2022 to consider the impacts of the global pandemic. NSD intends to watch enrollment closely and will update the projections and related planning as necessary based on actual results. However, given recent trends and knowledge of development within the pipeline, the District expects to see continued growth throughout the six-year planning period and beyond.

Long Range Forecasts

The modified cohort methodology described above was extrapolated to 2031 to produce a longer-range forecast (**Table 2.2**). Using this methodology, NSD’s enrollment shows continued growth from 2022 to 2031 of 839 students. This longer range model assumes that the state forecasts of births, K-12 growth, and continued population growth for the Puget Sound are reasonably accurate.

FTE Enrollment Forecast

Table 2.2

Grade Band	October 2022	October 2027	October 2031
Elementary	10,298	10,603	10,231
Middle	5,281	5,499	5,558
High	6,974	7,110	7,601
Total	22,553	23,211	23,390

Future growth trends are uncertain. Changes in population growth, fertility rates, new housing development slowdown, or a sharp downturn in the economic conditions in the Puget Sound region could have a major impact on long term enrollment, making it significantly lower or higher than the current estimate. Given this uncertainty, the current forecast should be considered a reasonable estimate based on the best information available, but subject to change as newer information about trends becomes available.

Snohomish County/OFM Forecasts

Using OFM/County data provided by Snohomish County, NSD projects a 2044 student FTE population of 30,924 (**Table 2.3**). For the six year period between 2016 and 2021, the District's actual enrollment averaged 39.7% of the OFM/County population estimates. Based on the 2020 Census data, the District's actual enrollment averaged 35.54% of the OFM/County population estimates. However, these figures are misleading in that they assume that all of the District's students reside in Snohomish County. This is not the case given that the NSD's boundaries include both King and Snohomish County. As such, the projections are highly speculative and are used only for general planning and comparative purposes.

FTE Enrollment Forecast – 2044 OFM Estimates*

Table 2.3

Grade Band	October 2021	October 2028	October 2044
Elementary	10,212	11,319	14,086
Middle	5,322	5,914	7,341
High	6,885	7,648	9,497
Total	22,419	24,881	30,924

*Assumes that percentage per grade span will remain constant through 2044

District Standard of Service

Section 3

Primary Objective

Optimizing student learning is the heart of what the Northshore School District strives for in establishing its service standard for classroom capacity utilization. This requires a constant review and assessment of programs, curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Equitable access to programs for all students is also a school board driven goal and NSD is continually striving for process and methods in which all students have the ability to access the best learning environment. Additional variables include changes in mandatory requirements dictated by the state, such as full-day kindergarten, Core 24 graduation requirements, and reduced K-3 class size ratios. These elements, as well as demographic projections, are weighed when determining service levels.

Existing Programs and Standards of Service

NSD currently provides traditional educational programs and nontraditional programs (**Table 3.1**). These programs are reviewed regularly to determine the optimum instructional methods and learning environments required at each school, with added attention to equitable access across the District. The required space for these programs, as well as any supporting space, is determined by noise, level of physical activity, teacher to student ratios, privacy, and/or the need for physical proximity to other services/facilities. Adequate space must exist for program flexibility, differing learning styles, program changes, project/problem-based learning and pre- and post-school activities. For example, service level capacities in rooms utilized in high schools for programs such as Special Education Functional Skills and Academics would reflect lower capacities of the defined service levels (**Table 3.2**), with eight students per classroom instead of 26 students per classroom.

Special teaching stations and programs offered by NSD at specific school sites are included in **Table 3.1**.

Programs and Teaching Stations

College in the High School		X

Capacity is affected at those buildings that house special programs. These programs usually require space modifications and frequently have lower class sizes than other, more traditional programs; this potentially translates into greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year. (As programs move or grow, depending on space needs, capacity can change or decline in a school).

Teaching station loading is identified in **Table 3.2**. Class sizes are averages based on actual utilization as influenced by state funding and instructional program standards. NSD's standard of service is based on state and/or contractual requirements.

Standard of Service – Class Size

Table 3.2

Snohomish County requires that the District's plan include a report regarding NSD's compliance with the District's minimum levels of service for the school years 2019-2021. **Table 3.3** shows the District's average students per teaching station as a measurement of its minimum levels of service as of October 1 for each year.

Average Students per Scheduled Teaching Station
(In classrooms without special programs)

Table 3.3

Total / Average	1,004		23.3	23.1	22.9

Capital Facilities Inventory

Section 4

Inventory

Under the Growth Management Act, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. **Capacity** is a term that can be used in 3 different ways:

Design Capacity: The number of students a school was designed to hold.

Instructional Capacity: The design capacity is affected at buildings that house special programs or different grade levels. Some programs and grades require space modifications and frequently have lower class sizes. As a result, instructional capacity – **The true, functional capacity of a school for students**, is often lower than design capacity.

For example, an elementary school with 10 classrooms may have been designed for 300 students with 25 students in a classroom. However, the site might not be able to support the design capacity of 300 students for two primary reasons. The first is class size for different grade levels. For example, full-day Kindergarten classes become overloaded at 23 students. Instructional capacity can also be affected by programs in a school. Special Education often has several programs offered at each site. These programs have limited class sizes. The instructional capacity of a school must be recalculated every year to reflect the number of classrooms at different grade levels and the classrooms that hold special programs with limited class sizes.

Available Capacity: When the enrollment of a school is subtracted from the instructional capacity, the remaining number is the available capacity. **It represents how much room is left at a school for new students.**

If the available capacity is a negative number, that represents a school that has exceeded its instructional capacity. When this happens, class sizes may rise, or teachers may need to travel to find a room that is available for instruction.

Table 4.2 summarizes the instructional capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other District owned facilities.

Variations in student instructional capacity between schools are often a result of the number of specialized programs offered at specific schools. As explained above, these programs require additional classroom space per student, which can reduce the instructional capacity of the school. Further, instructional capacities will change from year-to-year based on changes to existing programs, projected programs, and the resulting required space needed to deliver the instructional model at each site. To monitor this, and for use in preliminary instructional capacity planning, NSD establishes classroom design capacities for planning purposes. This is the maximum number of

students a school can accommodate based on a standard room capacity. These figures are then compared to the actual room utilization rate on a regular basis.

Capacity takes into consideration the specific programs that take place in each of the classrooms in a school every year. For example, capacities in rooms utilized for programs such as special education would reflect the defined service levels (**Table 3.2**), ranging from 8 to 26 students per room. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. In secondary schools, the utilization percentage may be higher. Capacities are updated annually in the CFP to reflect current program needs and classroom utilization.

Schools

Table 4.1 Illustrates the age of each school, the dates of modernizations and added capacity, and the historical timeline. **Table 4.2** shows the District's permanent and portable instructional student capacity for the 2021-22 school year.

**Sorenson Early Childhood Center serves students age 3-5 yrs and does not provide any capacity for K-5 grades;

*Bear Creek provides programs for the Northshore Family Partnerships/Northshore Network and does not provide regular capacity.

Relocatable Classroom Facilities (Portables)

Portable classrooms provide temporary/interim classroom space to house students until permanent facilities can be constructed and to prevent over-building of permanent capacity. Traditionally, NSD has aimed to keep its total capacity provided by portables at or below 10% to a maximum of 15% percent of its total capacity. This percentage fluctuates, impacted by growth and changes in instructional program needs.

Table 4.2 shows all instructional portables at each school. Not included in the interim classroom capacity are portables that are used for daycare, PTA, conference rooms/resource rooms, OT/PT, LAP, science or other labs, ASB, music or other non-instructional uses.

Portables are utilized to help achieve efficient facility utilization and balance economic costs while encouraging innovation and new approaches, particularly for non-core or pilot programs. The District regularly reassesses the need for portables as permanent capacity is built or other changes occur (such as revisions to instructional programs. At this time, NSD anticipates a continued need for portables as a part of the capacity solution. In some cases, portables may be moved from one grade band to another to address capacity needs. Future updates to the CFP will note any adjustments.

A typical portable classroom provides capacity for approximately 25 students at the elementary level or 26 at the secondary level. Portables are used to meet a variety of instructional needs. Of the 147 portable classrooms that the District owns, 121 are currently being used as classrooms for scheduled classes. The District's Enrollment Demographics Task Force (EDTF) has recommended that the District begin to phase out the increasing number of older portables as capacity allows, but with recent growth trends, the District continues to be reliant on this interim capacity. All portables are inspected regularly and upgraded as needed, or as systems require.

The lifespan of a portable is approximately 20 years and up to 25 years with aggressive maintenance. Portables have been an effective method for meeting capacity needs in a district that has experienced rapid increases in enrollment. At this time, the District's inventory is aging with 97 of the 147 portables the district owns having reached 20 years of service. By 2026, 97 portables will be 20 years or older. Although the current bond replaces 67 aging portables, total capacity at schools with portables will be impacted in the future as the need to retire aging portables increases.

Other Facilities

In addition to 34 school sites, the District owns and operates sites that provide transportation, administration, maintenance and operational support to schools. The District also holds undeveloped properties that were acquired for potential development of a facility for instructional use. An inventory of these facilities is provided in **Table 4-4** below.

[Inventory of Support Facilities & Underdeveloped Land](#)

Table 4.4

Facility Name	Building Area (Sq. Feet)	Site Size (Acres)
Administrative Center (Monte Villa)	49,000	5
Support Services Building	41,000	5
Warehouse	44,000	2
Transportation	39,000	9
20521 48 th Dr SE (includes Ruby Bridges ES and remaining undeveloped portion planned for a future school site)		33
19827 88 th Ave NE		10
18416 88 th Ave NE		50,011 sf
15215, 15123, 15127 84 th Ave NE & 8305 NE 153 rd St (4 parcels adjacent to Moorlands ES)		49,993 sf
Paradise Lake Site*		26
Wellington Hills Site**		104

*Note: Paradise Lake property is located in King County, outside the Urban Growth Area. In 2012, King County prohibited the siting of schools outside the UGA; although the property was purchased prior to that change, it is not currently useable as a potential school site.

**Note: The Wellington property is located in Snohomish County, adjacent to the Maltby Urban Growth Area. In 2015, a purchase and sale agreement was signed and entered into between Snohomish County and Northshore School District, but legal challenges ensued and closing of the property sale was delayed until October 2017. A settlement agreement was reached in 2019 and recorded under Snohomish County Recording No. 201906210221. The District has no active project at this site, nor are there definitive short or long-term plans for siting a school at this location.

Projected Facility Needs

Section 5

Planning History

In 2001, Northshore School District Board of Directors established a board policy to create a standing, community-based taskforce to study District-wide enrollment and demographic changes and the resulting impacts on school capacity needs, instructional programs, or other variables. The Enrollment Demographic Task Force (EDTF) examines enrollment projections, capacity considerations, student impacts, cost impacts, program needs, etc., and boundary adjustments based upon the above. The committee recommends potential solutions to the school board. If approved by the board, these recommended actions are implemented by the District and incorporated into the Capital Facilities Plan.

Using October 2021 enrollment figures, the District enrollment grew by over 1.5% or 1,134 new students during the previous six year period. The high school grade span has grown by over 740 new students in that time; an 11% increase. As noted above, October 2021 enrollment figures were down slightly due to the impacts of the pandemic but are expected to return to pre-2020 figures post-pandemic. To accommodate the District's growth, EDTF identified mitigation strategies (in order of priority) for the District to employ when addressing existing and future capacity needs (**Table 5.1**).

EDTF continues to monitor development and growth across the district and has noted that although development in some northern areas of the District is slowing down, development is increasing in the western and southern regions. EDTF applies capacity mitigation tools to ease overcrowding and balance enrollments where and when necessary, making recommendations to the Superintendent and School Board.

Longer Lead Time
Adjust service areas
Adjust feeder patterns
New construction
Acquire new property

Planned Improvements - Construction to Accommodate New Growth

The continued increase in enrollment has fully exhausted capacity increases from relocating building programs, portable additions, grade reconfiguration, and boundary changes. Growth continues to outpace school capacity. Growth has been concentrated in northern, central, and southern portions of NSD and is accelerating at the secondary level.

The \$425 million 2022 capital bond approved by voters includes eight new projects to add permanent capacity across the District at all grade levels. Note that the number of new permanent classrooms is an early planning estimate. The District will be spending the next year working with architects and contractors to develop specific plans for each site. NSD will also take into consideration recent and future growth within each school's boundaries to inform any potential changes to the number of proposed classrooms.

- Inglemoor High School (IHS)
 - IHS currently has 6 portables on site. 5 portables are used for regular instruction and 1 is used for SPED instruction. The modernization project proposes replacing the 6 portables on site with permanent classrooms, and adding 10 additional permanent classrooms. Also proposed are a new athletic support space, a new commons, and a new main office complex to support increased capacity.
- Leota Middle School (LMS)
 - LMS currently has 7 portables on site. 4 portables are used for regular classroom instruction, 1 is used for SPED instruction, and 2 are for auxiliary classes. The modernization project proposes replacing the 7 portables with permanent classrooms, and adding 5 additional permanent classrooms. Also proposed are a new gym, commons, main office complex and improved site circulation to support increased capacity.
- Kenmore Elementary School
 - Kenmore currently has 9 portables on site. 5 portables are used for regular instruction. 4 are used for specialists and programs. The modernization project
 - proposes replacing the 9 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, commons, main office complex, a fully inclusive playground, and improved site circulation to support increased capacity.
- Crystal Springs Elementary School
 - Crystal Springs currently has 10 portables on site. 8 portables are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.

- Fernwood Elementary School
 - Fernwood currently has 18 portables on site. 14 are used for regular classroom instruction. 1 is a restroom portable. 3 are used for specialists and programs. The modernization project proposes replacing those 18 portables with permanent classrooms, adding 3 additional permanent classrooms including the conversion of the restroom portable to a classroom. Also proposed are an inclusive playground and improved site circulation to support increased capacity.
- Maywood Hills Elementary School
 - Maywood Hills currently has 10 portables on site. 8 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, and adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.
- Woodin Elementary School
 - Woodin currently has 6 portables on site. 4 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 6 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground and improved site circulation to support increased capacity.
- Sorenson Early Childhood Center (SECC)
 - SECC currently has 2 portables on site. Both are used for regular instruction. The modernization project proposes replacing those 2 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground to support increased capacity.

Long-term projections from 2021 – 2031 indicate growth of 971 new students, with fluctuation of growth at all grade levels, by 2031. The District will continue to monitor the factors that shape our capacity needs, i.e.; statewide legislative changes, instructional delivery requirements, the economy, changes in planned land use, changes in mandated program requirements, equitable access to programs, building permit activity, and birth rates, in order to help ensure needed instructional space is available when/where needed and will pursue additional land acquisition should construction of additional sites be necessary to accommodate those needs. Future updates to this CFP will include relevant information.

Table 5.2 summarizes the schools that will be undergoing construction as a result of the 2022 bond. Each project will include both capacity for growth and modernization of key systems and structures.

[Planned Construction Projects](#)
[Table 5.2](#)

Growth Projects	Estimated Completion Date	Projected Student Capacity Added
Partial renovations and permanent capacity additions to Crystal Springs, Fernwood, Kenmore, Maywood Hills, and Woodin Elementary	2025	1,608
Construct and equip Part 1 of Leota Middle School phased replacement	2026	312
Construct and equip Part 1 of Inglemoor High School phased replacement	2026	416
Classroom addition at Sorenson Early Childhood Center	2025	128

Portable Location Adjustments

Where growth results in capacity deficits at a specific grade band, portables may be relocated from one grade band to another to assist with meeting enrollment projections. In addition, the District may adjust program space within permanent facilities to move programs to portables to free up space in permanent facilities for additional regular student capacity. See **Section 4** for more detail regarding portables.

Capacity Analysis

The District's six-year capacity analysis, considering projected enrollment and planned new capacity, is shown in **Table 5.3**. As with any long-term projections, many assumptions and estimates on housing must be made, increasing the risk associated with the accuracy of enrollment forecasts. However, NSD has trended above mid-range projections in years past, and with a continuing strong real estate and development market, the District will plan for continued growth as projected.

NSD is in a planning year for the modernizations of 8 school sites. Estimated capacities for each site are used in this CFP. Adjustments may be made to capacities during planning in response to updated development data within a school's boundary area, and/or other needs that impact enrollment and capacity.

School Enrollment and Instructional Classroom Capacity

*Actual October 2021 enrollment

This table does not include new or relocated portable facilities over the six-year planning period; it also does not include the addition of permanent capacity at Sorenson Early Childhood Center.

For long-term planning purposes, a ten-year capacity analysis can be created. **Table 5.4** utilizes demographers' 10-year NSD forecast to create the best possible projection given the data available to us. Note that the longer the period of time that a forecast covers, the less accurate it becomes. Factors such as unforeseen changes in population and development may impact actual results. An example of this is the recent COVID-10 pandemic and the influence it has had on demographic and development trends in school districts, including NSD.

Year 2031 – Long-term Forecast of Enrollment and Instructional Capacity

Table 5.4

Assumes added new capacity projects included in this CFP but no future near-term planning in process and no adjustment of portable facilities.

Grade Level	Enrollment	Permanent Capacity	Total Capacity	Permanent surplus/(short)	Total surplus/(short)
Elementary	10,231	9,284	11,732	(947)	1,501
Middle School	5,558	5,262	5,782	(296)	224
High School	7,601	6,465	6,621	(1,136)	(980)
Total	23,390	21,011	24,135	(2,379)	745

Planned Improvements – Existing Facilities (Building Improvement Program)

In a number of sites (not identified for additional capacity in the 2022 bond) where the existing facility layout (building envelope) meets instructional needs and building structural integrity is good, individual building systems (such as HVAC, mechanical, flooring, roofing) are identified for replacement or modernization to extend the life of the overall site and ensure optimal learning environment for students. NSD continues to implement building improvement projects funded as a part of the 2018 Bond, and is currently planning implementation of improvements identified within the 2022 capital bond. See **Table 6.1** in Section 6.

Capital Facilities Financing Plan

Section 6

Funding of school facilities is typically secured from a number of sources including voter-approved bonds, state matching funds, impact fees, and mitigation payments. Each of these funding sources are discussed below.

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond issue. Bonds are sold as necessary to generate revenue. They are then retired through collection of property taxes. The District's Board of Directors, upon the recommendation of the Capital Bond Planning Task Force, sent a \$425 million bond measure to the voters in February 2022 to provide funding for growth-related projects included in this Capital Facilities Plan, as well as other District-wide building improvement or capital infrastructure needs. The voters approved the bond measure by 61.2%.

State School Construction Assistance

State financial assistance comes from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominantly from the sale of renewable resources (i.e. timber) from state school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation funds or the Superintendent of Public Instruction can prioritize projects for funding.

State financial assistance is available for qualifying school construction projects, however these funds may not be received until two to three years after a matched project has been completed. This requires the District to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds. These funds, as with all state funded programs, have been reduced, and given the current state budget, could be eliminated or eligibility criteria and funding formulas revised. Eligibility for state match is continually reviewed. Future updates to this plan will include updated information, as it becomes available.

Impact Fees
(See Section 7 for background, detail, and methodology)

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities such as schools) needed to accommodate growth from new development. The statute is clear that the financing of needed public facilities to serve growth cannot be funded solely by impact fees but rather must be balanced with other sources of public funds.

Budget and Financing Plan

Table 6.1 is a summary of the budget that supports the Capital Facilities Plan. Each project budget represents the total project costs which include; construction, taxes, planning, architectural and engineering services, permitting, environmental impact mitigation, construction testing and inspection, furnishings and equipment, escalation, and contingency. The table also identifies 2022 and future planned expenditures. It does not include project expenditures from previous years.

* Signifies schools with growth-related capacity improvements and eligible for funding with impact fee revenue. Listed modernization projects include added permanent capacity for growth.

Note: Costs for Inglemoor High School do not reflect expenses from years prior to 2021-22. Total project cost is \$110M.

Impact Fees

Section 7

School Impact Fees under the Washington State Growth Management Act

The Growth Management Act (GMA) authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate growth/new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands. The basic underlying assumption is that growth pays for growth.

Enrollment declines beginning around 2002 kept NSD from meeting the required eligibility criteria to collect school impact fees. The District is spread across two counties and also across the urban growth boundary. While development picked up on the north end of NSD, there was still ample capacity in the southeast area of the District. Because of the statutes and ordinances governing school district eligibility criteria to be able to collect school impact fees, NSD was not able to re-establish eligibility for collection of school impact fees until 2016. King County and the cities of Bothell, Kenmore, and Woodinville have all adopted the District's 2021 CFP and are collecting impact fees identified in that plan. Snohomish County adopted the District's 2020 CFP and is collecting impact fees associated with that plan. We anticipate all the above jurisdictions to consider and adopt this 2022 CFP this fall either as part of their regular budget cycle.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees may be calculated based on the District's cost per dwelling unit to purchase/acquire land for school sites, make site improvements, construct schools and purchase/install temporary facilities (portables), all for purposes of growth-related needs. The costs of projects that do not add growth-related capacity are not included in the impact fee calculations. The impact fee formula calculates a "cost per dwelling unit". New capacity construction costs addressing NSD's growth-related needs, are used in the calculation

A student factor (or student generation rate) is used to identify the average cost per NEW dwelling unit by measuring the average number of students generated by each NEW (sold and occupied) housing type (single family dwelling units, townhomes, and multi-family dwelling units). The student generation rate used is an actual generation of students by grade level that came from new development over a period of five (5) years. NSD updated its student factor for both single family and multi-family and townhome units in early 2022. The townhome generation factor will be new with this 2022 plan. The student factor analysis for NSD is included in **Appendix A**. The student factors in Appendix A are based on all newly constructed, sold, and occupied units.

The District's student-generation rate for multi-family dwelling units is much lower than the

student generation rate for single-family homes. As available land for single family development is beginning to be constrained, and multi-family development – most notably townhomes, is increasing, we anticipate continued increases in student generation rates from those units over time. In particular, the District’s student generation rates, when isolated for townhomes only, show that more students are residing in those units than in traditional multi-family units. NSD is requesting that each jurisdiction, if necessary, consider amendments to the school impact fee ordinance to recognize the impacts of townhome units as different from apartments and condominium units.

As required under GMA, credits are applied for State School Construction Assistance Funds to be reimbursed to the District, where expected, and projected future property taxes to be paid by the dwelling unit toward a capital bond/levy funding the capacity improvement. Formula driven fees are identified in **Appendix B**.

Snohomish County Code (30.66C) and King County Code (21A.43) establish each jurisdiction’s authority to collect school impact fees on behalf of the District. The formula for calculating impact fees is substantively identical in each code (with one exception that Snohomish County has separate fees for Multi-Family Units with 1 bedroom or less and Multi-Family Units with 2+ bedrooms). The codes of each of the cities are similar to those of the counties. These codes establish the conditions, restrictions, and criteria for eligibility to collect impact fees. Both counties define a school district’s “service area” to be the total geographic boundaries of the school district.

NSD updates the Capital Facilities Plan on an annual basis and carefully monitors enrollment projections against capacity needs. If legally supportable, the District requests its local jurisdictions to collect impact fees on behalf of NSD.

The impact fees requested in this year’s Capital Facilities Plan are based on growth related construction projects, including added permanent capacity at: Inglemoor High School (416), Leota Middle School (312), Kenmore Elementary (264), Crystal Springs Elementary (288), Fernwood Elementary (480), Maywood Hills Elementary (288), and Woodin Elementary (288).

[Proposed School Impact Fees](#)
[Snohomish County, City of Woodinville](#)[^]

Single Family Units	\$17,963
Townhome Units	\$7,152
Multi-Family Units – 2+ Bedrooms	\$0

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

[^]The District does not request that Snohomish County adopt a MF 1 bedroom/less fee on its behalf.

[Proposed School Impact Fees](#)
[King County, Bothell, Kenmore](#)*

Single Family Units	\$17,963
Multi-Family Units (incl. Townhomes)	\$2,625

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

*If Bothell or Kenmore determine the Snohomish County model, segregating townhomes separately from other multi-family units, then the Snohomish County fee proposal applies.

Introduction

Section 1

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act outlines thirteen broad goals including the adequate provision of necessary public facilities and services. Public schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student population in their districts.

The Northshore School District (NSD/District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act, the Codes of King and Snohomish Counties, and the cities of Bothell, Kenmore, and Woodinville. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period 2022-2028. It also provides longer-term enrollment projections. The role of impact fees in funding school construction is addressed in **Section 7** of this report.

The District updates its Capital Facilities Plan on an annual basis. The most recent update previous to this version was adopted by the Board of Directors in June 2021.

Summary

NSD enrollment has grown by 1,134 students between 2016 and 2021, with an average growth rate of 1.15%. As a comparison, for the years 2015 to 2020, District enrollment grew by 1,740 students, with an average growth rate of 1.65%. Although growth is still forecast for the district, the impact of the global pandemic has been to slow it down. In October of 2021, the District's enrollment fell by 1.2% primarily as a result of the pandemic and its effects on in-school instruction. We expect fall of 2022-23 enrollment to start to return to pre-pandemic levels and thereafter increase to reflect continued residential development within the District. Enrollment growth from new development in the northern, central, and southern service areas of the District continues at a steady pace.

With the impact of the pandemic, there are questions about future growth in NSD and whether or not it will continue at a rate at or above forecasts, or if growth will begin to stabilize. The sale of existing homes continues to be strong, with over 2,800 existing homes sold in 2020-21, an increase of over 17% from 2019-20. There also continues to be strong growth in new townhome and multi-family projects that could produce enrollment gains. Recent figures allow us to segregate how many new students are generated from townhomes and to calculate a separate impact fee for

those jurisdictions that have a separate townhome fee category. In Spring of 2020, approximately 13 students were generated for every 100 townhomes. As of Spring 2022, 38 students are generated per 100 townhomes. See **Appendix A**.

Growth in NSD has largely been accommodated in recent years through the construction of new capacity, limiting waivers at most schools, converting special-use portables and non-classroom spaces into classroom space, adjusting boundaries, and adding portable classrooms. The 2022 bond projects, approved by our voters in February 2022, will provide for permanent capacity additions at all grade levels, as further detailed in this CFP.

Overview of the Northshore School District

The Northshore School District spans 60 square-miles and primarily serves five jurisdictions: King County, Snohomish County, the City of Bothell, the City of Kenmore, and the City of Woodinville. There are some addresses located in the cities of Brier, Kirkland and Redmond, but they are either in areas not expected to experience any new residential development or in very small areas with previously developed residential areas. For the purposes of the District's CFP and long-term projections, those areas are considered de minimis impacts on NSD's grade bands. The King-Snohomish County line divides NSD such that roughly two-thirds of the District's population is in King County and one-third in Snohomish County (23,927).

The District currently operates twenty elementary schools, six middle schools, and four comprehensive high schools. NSD also has one choice high school (Innovation Lab High School), one alternative high school (Secondary Academy for Success), a hybrid combination of choice school with high levels of parent involvement (Northshore Networks), a home school program, (Northshore Family Partnership Program), a virtual learning school (Northshore Virtual Program) and an early childhood center (Sorenson Early Childhood Center).

The Urban Growth Area boundary (UGA) divides NSD, creating capacity utilization challenges. As new residential development continues to occur even at more moderate rates, land for potential new school sites is scarce. King County does not allow for school siting outside the UGA, but Snohomish County does provide for school siting via a Conditional Use Permit (CUP) process.

The District participates in regular conversations regarding school facilities planning with jurisdictions in King County pursuant to regular meetings held to comply with Policy PF-22 (formerly PF-19A) of the King County Countywide Planning Policies. Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. NSD appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Student Enrollment Trends and Forecasts

Section 2

Background

Elementary enrollment in NSD has grown steadily in recent years, with a slight dip in 2020 and 2021 reflecting the global pandemic. Growth increases in recent years are a result of larger birth cohorts and a consistent increase in new residential development. This wave of elementary enrollment growth is beginning to move into the middle and high school grades and is anticipated to continue over the next 10 years. At the same time, elementary enrollment is projected to grow within and beyond the next 5 years.

Similar to past years, this year's forecasts consider regional and local trends in population growth, birth rates, and housing development, analyzing corresponding projections down to the school feeder pattern level. Growth rates were adjusted based on permit information specific to those respective areas. The resulting trends were used to further refine the projection methodology for enrollment forecasts. The following section describes in more detail the assumptions used to develop the forecast and compares the result of this projection to other available methodologies.

While new single family home construction and sales within NSD are continuing to slow, there is a marked increase in the development of townhomes and continued strong development of apartments and condominiums. The new townhome developments include units with 3 bedrooms or more. From a student generation perspective, we are seeing enrollment numbers affected, with increases in the number of students generated from townhomes that have completed construction, been sold, and become occupied.

As of December 2021, development data shows 887 single family homes and 3,537 multi-family units in the development pipeline within the District. It is significant to note that this data excludes short plat development. As larger tracts of land become more rare for developers to acquire within NSD, there is a trend towards more short plats as infill lots are purchased. The increasing number of short plats may impact enrollment, increasing what is forecast. In addition, if future adjustments are made to the UGA in Snohomish County, larger lots will once again become available to developers with the potential of increased NSD student enrollment.

Methodology

Numerous methodologies are available for projecting long-term enrollments. The most common method is known as the cohort survival method. This method tracks groups of students through

the system and adjusts the population to account for the average year-to-year growth. For example, this year's fourth grade is adjusted based on the average enrollment trend of the past in order to estimate next year's fifth grade enrollment. This calculation method considers the past five years' trends to determine the average adjustment factor for each grade, or cohort. The method works well for all grades except kindergarten, for which there is no previous year data. For kindergarten, two methodologies are generally used:

- A linear extrapolation from the previous five years of kindergarten enrollment, assuming that there is a trend;
- Or, alternatively, a comparison of the kindergarten enrollment to births from five years prior can be used to calculate a "birth-to-K" ratio. For example, kindergarten enrollment in 2021 is divided by the total births in King and Snohomish counties in 2016 to produce a "birth-to-K" ratio. The average ratio for the last five years can then be applied to births in subsequent years to estimate kindergarten enrollment.

OSPI uses the cohort survival method to predict enrollment for all school districts in the state for the limited purpose of the School Construction Assistance Program. The cohort survival method generally works well for districts that have a consistent trend of gradual increases or declines in enrollment. It is less reliable in districts where spikes in demographic trends (especially a marked increase or decrease in new housing) can lead to dramatic swings in enrollment from one year to the next. In addition, the use of the linear extrapolation method at the kindergarten level can result in a distorted trend since it does not consider changes in birth rate trends. The impact of COVID on enrollment has contributed to the cohort survival method being unreliable. This may continue for several years.

NSD works with professional demographers to combine the cohort survival methodology with other information about births, housing, regional population trends, mobility, and even trends in service area and private school enrollment. This modified cohort survival methodology provides a more accurate forecast. **Table 2.1** is a forecast of enrollment based on this model.

[Mid-Range Enrollment Forecast](#)

Table 2.1

6	1,791	1,729	1,757	1,807	1,810	1,734	1,907
7	1,745	1,801	1,760	1,773	1,825	1,831	1,754
8	1,786	1,751	1,795	1,763	1,777	1,832	1,838
9	1,800	1,843	1,775	1,829	1,797	1,814	1,870
10	1,850	1,792	1,836	1,776	1,831	1,802	1,820
11	1,653	1,734	1,689	1,740	1,684	1,739	1,711
12	1,582	1,605	1,692	1,657	1,706	1,654	1,709
Total	22,419	22,253	22,772	22,551	22,999	23,061	23,212
K - 5	10,212	10,298	10,468	10,506	10,571	10,655	10,603
6 - 8	5,322	5,281	5,312	5,343	5,412	5,397	5,499
9 - 12	6,885	6,974	6,692	7,002	7,018	7,009	7,110

The modified cohort survival methodology in **Table 2.1** shows continued enrollment increases within the District through the six-year planning period. The methodology uses a “mid-range” projection. In total, the projected K-12 increase in enrollment is 660 students over the six-year period. The District’s enrollment projections were updated in February 2022 to consider the impacts of the global pandemic. NSD intends to watch enrollment closely and will update the projections and related planning as necessary based on actual results. However, given recent trends and knowledge of development within the pipeline, the District expects to see continued growth throughout the six-year planning period and beyond.

Long Range Forecasts

The modified cohort methodology described above was extrapolated to 2031 to produce a longer-range forecast (**Table 2.2**). Using this methodology, NSD’s enrollment shows continued growth from 2022 to 2031 of 839 students. This longer range model assumes that the state forecasts of births, K-12 growth, and continued population growth for the Puget Sound are reasonably accurate.

FTE Enrollment Forecast

Table 2.2

Grade Band	October 2022	October 2026	October 2031
Elementary	10,297	10,655	10,231
Middle	5,280	5,396	5,558
High	6,974	7,009	7,601
Total	22,551	23,060	23,390

Future growth trends are uncertain. Changes in population growth, fertility rates, new housing development slowdown, or a sharp downturn in the economic conditions in the Puget Sound region could have a major impact on long term enrollment, making it significantly lower or higher than the current estimate. Given this uncertainty, the current forecast should be considered a reasonable estimate based on the best information available, but subject to change as newer information about trends becomes available.

Snohomish County/OFM Forecasts

Using OFM/County data provided by Snohomish County, NSD projects a 2044 student FTE population of 30,924 (**Table 2.3**). For the six year period between 2016 and 2021, the District's actual enrollment averaged 39.7% of the OFM/County population estimates. Based on the 2020 Census data, the District's actual enrollment averaged 35.54% of the OFM/County population estimates. However, these figures are misleading in that they assumes that all of the District's students reside in Snohomish County. This is not the case given that the NSD's boundaries include both King and Snohomish County. As such, the projections are highly speculative and are used only for general planning and comparative purposes.

FTE Enrollment Forecast – 2044 OFM Estimates*

Table 2.3

grade band	2021	2027	2044
Elementary:	10,212	11,319	14,086

High School:	6,885	7,648	9,497
Total:	22,419	24,901	30,924

*Assumes that percentage per grade span will remain constant through 2044

District Standard of Service

Section 3

Primary Objective

Optimizing student learning is the heart of what the Northshore School District strives for in establishing its service standard for classroom capacity utilization. This requires a constant review and assessment of programs, curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Equitable access to programs for all students is also a school board driven goal and NSD is continually striving for process and methods in which all students have the ability to access the best learning environment. Additional variables include changes in mandatory requirements dictated by the state, such as full-day kindergarten, Core 24 graduation requirements, and reduced K-3 class size ratios. These elements, as well as demographic projections, are weighed when determining service levels.

Existing Programs and Standards of Service

NSD currently provides traditional educational programs and nontraditional programs (**Table 3.1**). These programs are reviewed regularly to determine the optimum instructional methods and learning environments required at each school, with added attention to equitable access across the District. The required space for these programs, as well as any supporting space, is determined by noise, level of physical activity, teacher to student ratios, privacy, and/or the need for physical proximity to other services/facilities. Adequate space must exist for program flexibility, differing learning styles, program changes, project/problem-based learning and pre- and post-school activities. For example, service level capacities in rooms utilized in high schools for programs such as Special Education Functional Skills and Academics would reflect lower capacities of the defined service levels (**Table 3.2**), with eight students per classroom instead of 26 students per classroom.

Special teaching stations and programs offered by NSD at specific school sites are included in **Table 3.1**.

Capacity is affected at those buildings that house special programs. These programs usually require space modifications and frequently have lower class sizes than other, more traditional programs; this potentially translates into greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year. (As programs move or grow, depending on space needs, capacity can change or decline in a school).

Teaching station loading is identified in **Table 3.2**. Class sizes are averages based on actual

utilization as influenced by state funding and instructional program standards. NSD's standard of service is based on state and/or contractual requirements.

Standard of Service – Class Size

Snohomish County requires that the District's plan include a report regarding NSD's compliance with the District's minimum levels of service for the school years 2019-2021. **Table 3.3** shows the District's average students per teaching station as a measurement of its **minimum levels of** service as of October 1 for each year.

Average Students per Scheduled Teaching Station (In classrooms without special programs)

Table 3.3

Grade Level	# of Scheduled Teaching Stations	Minimum Level of Service	2019- 2020	2020- 2021	2021- 2022
K – 5	489	24	22.2	21.4	20.9
6 – 8	212	26	26.0	25.4	25.1
9 – 12	303	26	21.8	22.5	22.7
Total / Average	1,004		23.3	23.1	22.9

Capital Facilities Inventory

Section 4

Inventory

Under the Growth Management Act, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. **Capacity** is a term that can be used in 3 different ways:

Design Capacity: The number of students a school was designed to hold.

Instructional Capacity: The design capacity is affected at buildings that house special programs or different grade levels. Some programs and grades require space modifications and frequently have lower class sizes. As a result, instructional capacity – **The true, functional capacity of a school for students**, is often lower than design capacity.

For example, an elementary school with 10 classrooms may have been designed for 300 students with 25 students in a classroom. However, the site might not be able to support the design capacity of 300 students for two primary reasons. The first is class size for different grade levels. For example, full-day Kindergarten classes become overloaded at 23 students. Instructional capacity can also be affected by programs in a school. Special Education often has several programs offered at each site. These programs have limited class sizes. The instructional capacity of a school must be recalculated every year to reflect the number of classrooms at different grade levels and the classrooms that hold special programs with limited class sizes.

Available Capacity: When the enrollment of a school is subtracted from the instructional capacity, the remaining number is the available capacity. **It represents how much room is left at a school for new students.**

If the available capacity is a negative number, that represents a school that has exceeded its instructional capacity. When this happens, class sizes may rise, or teachers may need to travel to find a room that is available for instruction.

Table 4.2 summarizes the instructional capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other District owned facilities.

Variations in student instructional capacity between schools are often a result of the number of specialized programs offered at specific schools. As explained above, these programs require additional classroom space per student, which can reduce the instructional capacity of the school. Further, instructional capacities will change from year-to-year based on changes to existing programs, projected programs, and the resulting required space needed to deliver the instructional model at each site. To monitor this, and for use in preliminary instructional capacity planning, NSD establishes classroom design capacities for planning purposes. This is the maximum number of students a school can accommodate based on a standard room capacity. These figures are then compared to the actual room utilization rate on a regular basis.

Capacity takes into consideration the specific programs that take place in each of the classrooms in a school every year. For example, capacities in rooms utilized for programs such as special education would reflect the defined service levels (**Table 3.2**), ranging from 8 to 26 students per room. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. In secondary schools, the utilization percentage may be higher. Capacities are updated annually in the CFP to reflect current program needs and classroom utilization.

Schools

Table 4.1 Illustrates the age of each school, the dates of modernizations and added capacity, and the historical timeline. **Table 4.2** shows the District's permanent and portable instructional student capacity for the 2021-22 school year.

Historical Timeline of School Construction and Modernization

**Sorenson Early Childhood Center serves students age 3-5 yrs and does not provide any capacity for K-5 grades;

*Bear Creek provides programs for the Northshore Family Partnerships/Northshore Network and does not provide regular capacity.

Relocatable Classroom Facilities (Portables)

Portable classrooms provide temporary/interim classroom space to house students until permanent facilities can be constructed and to prevent over-building of permanent capacity. Traditionally, NSD has aimed to keep its total capacity provided by portables at or below 10% to a maximum of 15% percent of its total capacity. This percentage fluctuates, impacted by growth and changes in instructional program needs.

Table 4.2 shows all instructional portables at each school. Not included in the interim classroom capacity are portables that are used for daycare, PTA, conference rooms/resource rooms, OT/PT, LAP, science or other labs, ASB, music or other non-instructional uses.

Portables are utilized to help achieve efficient facility utilization and balance economic costs while encouraging innovation and new approaches, particularly for non-core or pilot programs. The District regularly reassesses the need for portables as permanent capacity is built or other changes occur (such as revisions to instructional programs. At this time, NSD anticipates a continued need for portables as a part of the capacity solution. In some cases, portables may be moved from one grade band to another to address capacity needs. Future updates to the CFP will note any adjustments.

A typical portable classroom provides capacity for approximately 25 students at the elementary level or 26 at the secondary level. Portables are used to meet a variety of instructional needs. Of the 147 portable classrooms that the District owns, 121 are currently being used as classrooms for scheduled classes. The District's Enrollment Demographics Task Force (EDTF) has recommended that the District begin to phase out the increasing number of older portables as capacity allows, but with recent growth trends, the District continues to be reliant on this interim capacity. All portables are inspected regularly and upgraded as needed, or as systems require.

The lifespan of a portable is approximately 20 years and up to 25 years with aggressive maintenance. Portables have been an effective method for meeting capacity needs in a district that has experienced rapid increases in enrollment. At this time, the District's inventory is aging with 97 of the 147 portables the district owns having reached 20 years of service. By 2026, 97 portables will be 20 years or older. Although the current bond replaces 67 aging portables, total capacity at schools with portables will be impacted in the future as the need to retire aging portables increases.

Other Facilities

In addition to 34 school sites, the District owns and operates sites that provide transportation, administration, maintenance and operational support to schools. The District also holds undeveloped properties that were acquired for potential development of a facility for instructional use. An inventory of these facilities is provided in **Table 4-4** below.

Inventory of Support Facilities & Underdeveloped Land
Table 4.4

Facility Name	Building Area (Sq. Feet)	Site Size (Acres)
Administrative Center (Monte Villa)	49,000	5
Support Services Building	41,000	5
Warehouse	44,000	2
Transportation	39,000	9
20521 48 th Dr SE (includes Ruby Bridges ES and remaining undeveloped portion planned for a future school site)		33
19827 88 th Ave NE		10
18416 88 th Ave NE		50,011 sf
15215, 15123, 15127 84 th Ave NE & 8305 NE 153 rd St (4 parcels adjacent to Moorlands ES)		49,993 sf
Paradise Lake Site*		26
Wellington Hills Site**		104

*Note: Paradise Lake property is located in King County, outside the Urban Growth Area. In 2012, King County prohibited the siting of schools outside the UGA; although the property was purchased prior to that change, it is not currently useable as a potential school site.

**Note: The Wellington property is located in Snohomish County, adjacent to the Maltby Urban Growth Area. In 2015, a purchase and sale agreement was signed and entered into between Snohomish County and Northshore School District, but legal challenges ensued and closing of the property sale was delayed until October 2017. A settlement agreement was reached in 2019 and recorded under Snohomish County Recording No. 201906210221. The District has no active project at this site, nor are there definitive short or long-term plans for siting a school at this location.

Projected Facility Needs

Section 5

Planning History

In 2001, Northshore School District Board of Directors established a board policy to create a standing, community-based taskforce to study District-wide enrollment and demographic changes and the resulting impacts on school capacity needs, instructional programs, or other variables. The Enrollment Demographic Task Force (EDTF) examines enrollment projections, capacity considerations, student impacts, cost impacts, program needs, etc., and boundary adjustments based upon the above. The committee recommends potential solutions to the school board. If approved by the board, these recommended actions are implemented by the District and incorporated into the Capital Facilities Plan.

Using October 2021 enrollment figures, the District enrollment grew by over 1.5% or 1,134 new students during the previous six year period. The high school grade span has grown by over 740 new students in that time; an 11% increase. As noted above, October 2021 enrollment figures were down slightly due to the impacts of the pandemic but are expected to return to pre-2020 figures post-pandemic. To accommodate the District's growth, EDTF identified mitigation strategies (in order of priority) for the District to employ when addressing existing and future capacity needs (**Table 5.1**).

EDTF continues to monitor development and growth across the district and has noted that although development in some northern areas of the District is slowing down, development is increasing in the western and southern regions. EDTF applies capacity mitigation tools to ease overcrowding and balance enrollments where and when necessary, making recommendations to the Superintendent and School Board.

Capacity Mitigation Tools
Table 5.1

Shorter Lead Time
Utilize existing spaces more creatively
Adjust waiver policies
Adjust program placements
Move classes to schools with capacity
Move existing portables
Install new portables
Lease space
Longer Lead Time
Adjust service areas
Adjust feeder patterns
New construction
Acquire new property

Planned Improvements - Construction to Accommodate New Growth

The continued increase in enrollment has fully exhausted capacity increases from relocating building programs, portable additions, grade reconfiguration, and boundary changes. Growth continues to outpace school capacity. Growth has been concentrated in northern, central, and southern portions of NSD and is accelerating at the secondary level.

The \$425 million 2022 capital bond approved by voters includes eight new projects to add permanent capacity across the District at all grade levels. Note that the number of new permanent classrooms is an early planning estimate. The District will be spending the next year working with architects and contractors to develop specific plans for each site. NSD will also take into consideration recent and future growth within each school's boundaries to inform any potential changes to the number of proposed classrooms.

- Inglemoor High School (IHS)
 - IHS currently has 6 portables on site. 5 portables are used for regular instruction and 1 is used for SPED instruction. The modernization project proposes replacing the 6 portables on site with permanent classrooms, and adding 10 additional permanent classrooms. Also proposed are a new athletic support space, a new commons, and a new main office complex to support increased capacity.
- Leota Middle School (LMS)
 - LMS currently has 7 portables on site. 4 portables are used for regular classroom instruction, 1 is used for SPED instruction, and 2 are for auxiliary classes. The modernization project proposes replacing the 7 portables with permanent classrooms, and adding 5 additional permanent classrooms. Also proposed are a new gym, commons, main office complex and improved site circulation to support

increased capacity.

- Kenmore Elementary School
 - Kenmore currently has 9 portables on site. 5 portables are used for regular instruction. 4 are used for specialists and programs. The modernization project
 - proposes replacing the 9 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, commons, main office complex, a fully inclusive playground, and improved site circulation to support increased capacity.
- Crystal Springs Elementary School
 - Crystal Springs currently has 10 portables on site. 8 portables are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.
- Fernwood Elementary School
 - Fernwood currently has 18 portables on site. 14 are used for regular classroom instruction. 1 is a restroom portable. 3 are used for specialists and programs. The modernization project proposes replacing those 18 portables with permanent classrooms, adding 3 additional permanent classrooms including the conversion of the restroom portable to a classroom. Also proposed are an inclusive playground and improved site circulation to support increased capacity.
- Maywood Hills Elementary School
 - Maywood Hills currently has 10 portables on site. 8 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, and adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.
- Woodin Elementary School
 - Woodin currently has 6 portables on site. 4 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 6 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground and improved site circulation to support increased capacity.

- Sorenson Early Childhood Center (SECC)
 - SECC currently has 2 portables on site. Both are used for regular instruction. The modernization project proposes replacing those 2 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground to support increased capacity.

Long-term projections from 2021 – 2031 indicate growth of 971 new students, with fluctuation of growth at all grade levels, by 2031. The District will continue to monitor the factors that shape our capacity needs, i.e.; statewide legislative changes, instructional delivery requirements, the economy, changes in planned land use, changes in mandated program requirements, equitable access to programs, building permit activity, and birth rates, in order to help ensure needed instructional space is available when/where needed and will pursue additional land acquisition should construction of additional sites be necessary to accommodate those needs. Future updates to this CFP will include relevant information.

Table 5.2 summarizes the schools that will be undergoing construction as a result of the 2022 bond. Each project will include both capacity for growth and modernization of key systems and structures.

[Planned Construction Projects](#)
Table 5.2

Growth Projects	Estimated Completion Date	Projected Student Capacity Added
Partial renovations and permanent capacity additions to Crystal Springs, Fernwood, Kenmore, Maywood Hills, and Woodin Elementary	2025	1,608
Construct and equip Part 1 of Leota Middle School phased replacement	2026	312
Construct and equip Part 1 of Inglemoor High School phased replacement	2026	416
Classroom addition at Sorenson Early Childhood Center	2025	128

Portable Location Adjustments

Where growth results in capacity deficits at a specific grade band, portables may be relocated from one grade band to another to assist with meeting enrollment projections. In addition, the District may adjust program space within permanent facilities to move programs to portables to free up space in permanent facilities for additional regular student capacity. See **Section 4** for more detail regarding portables.

Capacity Analysis

The District's six-year capacity analysis, considering projected enrollment and planned new capacity, is shown in **Table 5.3**. As with any long-term projections, many assumptions and estimates on housing must be made, increasing the risk associated with the accuracy of enrollment forecasts. However, NSD has trended above mid-range projections in years past, and with a continuing strong real estate and development market, the District will plan for continued growth as projected.

NSD is in a planning year for the modernizations of 8 school sites. Estimated capacities for each site are used in this CFP. Adjustments may be made to capacities during planning in response to updated development data within a school's boundary area, and/or other needs that impact enrollment and capacity.

School Enrollment and Instructional Classroom Capacity

Table 5.3

	2021-22*	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28

*Actual October 2021 enrollment

This table does not include new or relocated portable facilities over the six-year planning period; it also does not include the addition of permanent capacity at Sorenson Early Childhood Center.

For long-term planning purposes, a ten-year capacity analysis can be created. **Table 5.4** utilizes demographers' 10-year NSD forecast to create the best possible projection given the data available to us. Note that the longer the period of time that a forecast covers, the less accurate it becomes. Factors such as unforeseen changes in population and development may impact actual results. An example of this is the recent COVID-10 pandemic and the influence it has had on demographic and development trends in school districts, including NSD.

Year 2031 – Long-term Forecast of Enrollment and Instructional Capacity

Table 5.4

Assumes added new capacity projects included in this CFP but no future near-term planning in process and no adjustment of portable facilities.

Grade Level	Enrollment	Permanent Capacity	Total Capacity	Permanent surplus/(short)	Total surplus/(short)
Elementary	10,231	9,284	11,732	(947)	1,501
Middle School	5,558	5,262	5,782	(296)	224
High School	7,601	6,465	6,621	(1,136)	(980)
Total	23,390	21,011	24,135	(2,379)	745

Planned Improvements – Existing Facilities (Building Improvement Program)

In a number of sites (not identified for additional capacity in the 2022 bond) where the existing facility layout (building envelope) meets instructional needs and building structural integrity is good, individual building systems (such as HVAC, mechanical, flooring, roofing) are identified for replacement or modernization to extend the life of the overall site and ensure optimal learning environment for students. NSD continues to implement building improvement projects funded as a part of the 2018 Bond, and is currently planning implementation of improvements identified within the 2022 capital bond. See **Table 6.1** in Section 6.

Capital Facilities Financing Plan

Section 6

Funding of school facilities is typically secured from a number of sources including voter-approved bonds, state matching funds, impact fees, and mitigation payments. Each of these funding sources are discussed below.

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond issue. Bonds are sold as necessary to generate revenue. They are then retired through collection of property taxes. The District's Board of Directors, upon the recommendation of the Capital Bond Planning Task Force, sent a \$425 million bond measure to the voters in February 2022 to provide funding for growth-related projects included in this Capital Facilities Plan, as well as other District-wide building improvement or capital infrastructure needs. The voters approved the bond measure by 61.2%.

State School Construction Assistance

State financial assistance comes from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominantly from the sale of renewable resources (i.e. timber) from state school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation funds or the Superintendent of Public Instruction can prioritize projects for funding.

State financial assistance is available for qualifying school construction projects, however these funds may not be received until two to three years after a matched project has been completed. This requires the District to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds. These funds, as with all state funded programs, have been reduced, and given the current state budget, could be eliminated or eligibility criteria and funding formulas revised. Eligibility for state match is continually reviewed. Future updates to this plan will include updated information, as it becomes available.

Impact Fees

(See Section 7 for background, detail, and methodology)

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities such as schools) needed to accommodate growth from new development. The statute is clear that the financing of needed public facilities to serve growth cannot be funded solely by impact fees but rather must be balanced with other sources of public funds.

Budget and Financing Plan

Table 6.1 is a summary of the budget that supports the Capital Facilities Plan. Each project budget represents the total project costs which include; construction, taxes, planning, architectural and engineering services, permitting, environmental impact mitigation, construction testing and inspection, furnishings and equipment, escalation, and contingency. The table also identifies 2022 and future planned expenditures. It does not include project expenditures from previous years.

8-Year Capital Facilities Expenditures Finance Plan

Impact Fees

Section 7

School Impact Fees under the Washington State Growth Management Act

The Growth Management Act (GMA) authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate growth/new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands. The basic underlying assumption is that growth pays for growth.

Enrollment declines beginning around 2002 kept NSD from meeting the required eligibility criteria to collect school impact fees. The District is spread across two counties and also across the urban growth boundary. While development picked up on the north end of NSD, there was still ample capacity in the southeast area of the District. Because of the statutes and ordinances governing school district eligibility criteria to be able to collect school impact fees, NSD was not able to re-establish eligibility for collection of school impact fees until 2016. King County and the cities of Bothell, Kenmore, and Woodinville have all adopted the District's 2021 CFP and are collecting impact fees identified in that plan. Snohomish County adopted the District's 2020 CFP and is collecting impact fees associated with that plan. We anticipate all the above jurisdictions to consider and adopt this 2022 CFP this fall either as part of their regular budget cycle.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees may be calculated based on the District's cost per dwelling unit to purchase/acquire land for school sites, make site improvements, construct schools and purchase/install temporary facilities (portables), all for purposes of growth-related needs. The costs of projects that do not add growth-related capacity are not included in the impact fee calculations. The impact fee formula calculates a "cost per dwelling unit". New capacity construction costs addressing NSD's growth-related needs, are used in the calculation

A student factor (or student generation rate) is used to identify the average cost per NEW dwelling unit by measuring the average number of students generated by each NEW (sold and occupied) housing type (single family dwelling units, townhomes, and multi-family dwelling units). The student generation rate used is an actual generation of students by grade level that came from new development over a period of five (5) years. NSD updated its student factor for

both single family and multi-family and townhome units in early 2022. The townhome generation factor will be new with this 2022 plan. The student factor analysis for NSD is included in **Appendix A**. The student factors in Appendix A are based on all newly constructed, sold, and occupied units.

The District's student-generation rate for multi-family dwelling units is much lower than the student generation rate for single-family homes. As available land for single family development is beginning to be constrained, and multi-family development – most notably townhomes, is increasing, we anticipate continued increases in student generation rates from those units over time. In particular, the District's student generation rates, when isolated for townhomes only, show that more students are residing in those units than in traditional multi-family units. NSD is requesting that each jurisdiction, if necessary, consider amendments to the school impact fee ordinance to recognize the impacts of townhome units as different from apartments and condominium units.

As required under GMA, credits are applied for State School Construction Assistance Funds to be reimbursed to the District, where expected, and projected future property taxes to be paid by the dwelling unit toward a capital bond/levy funding the capacity improvement. Formula driven fees are identified in **Appendix B**.

Snohomish County Code (30.66C) and King County Code (21A.43) establish each jurisdiction's authority to collect school impact fees on behalf of the District. The formula for calculating impact fees is substantively identical in each code (with one exception that Snohomish County has separate fees for Multi-Family Units with 1 bedroom or less and Multi-Family Units with 2+ bedrooms). The codes of each of the cities are similar to those of the counties. These codes establish the conditions, restrictions, and criteria for eligibility to collect impact fees. Both counties define a school district's "service area" to be the total geographic boundaries of the school district.

NSD updates the Capital Facilities Plan on an annual basis and carefully monitors enrollment projections against capacity needs. If legally supportable, the District requests its local jurisdictions to collect impact fees on behalf of NSD.

The impact fees requested in this year's Capital Facilities Plan are based on growth related construction projects, including added permanent capacity at: Inglemoor High School (416), Leota Middle School (312), Kenmore Elementary (264), Crystal Springs Elementary (288), Fernwood Elementary (480), Maywood Hills Elementary (288), and Woodin Elementary (288).

Proposed School Impact Fees
Snohomish County, City of Woodinville^

Single Family Units	\$17,963
Townhome Units	\$7,152
Multi-Family Units – 2+ Bedrooms	\$0

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

^The District does not request that Snohomish County adopt a MF 1 bedroom/less fee on its behalf.

Proposed School Impact Fees
King County, Bothell, Kenmore*

Single Family Units	\$17,963
Multi-Family Units (incl. Townhomes)	\$2,625

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

*If Bothell or Kenmore determine the Snohomish County model, segregating townhomes separately from other multi-family units, then the Snohomish County fee proposal applies.

2022 Northshore School District Map

Introduction

Section 1

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act outlines thirteen broad goals including the adequate provision of necessary public facilities and services. Public schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student population in their districts.

The Northshore School District (NSD/District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act, the Codes of King and Snohomish Counties, and the cities of Bothell, Kenmore, and Woodinville. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period 2022-2028. It also provides longer-term enrollment projections. The role of impact fees in funding school construction is addressed in **Section 7** of this report.

The District updates its Capital Facilities Plan on an annual basis. The most recent update previous to this version was adopted by the Board of Directors in June 2021.

Summary

NSD enrollment has grown by 1,134 students between 2016 and 2021, with an average growth rate of 1.15%. As a comparison, for the years 2015 to 2020, District enrollment grew by 1,740 students, with an average growth rate of 1.65%. Although growth is still forecast for the district, the impact of the global pandemic has been to slow it down. In October of 2021, the District's enrollment fell by 1.2% primarily as a result of the pandemic and its effects on in-school instruction. We expect fall of 2022-23 enrollment to start to return to pre-pandemic levels and thereafter increase to reflect continued residential development within the District. Enrollment growth from new development in the northern, central, and southern service areas of the District continues at a steady pace.

With the impact of the pandemic, there are questions about future growth in NSD and whether or not it will continue at a rate at or above forecasts, or if growth will begin to stabilize. The sale of existing homes continues to be strong, with over 2,800 existing homes sold in 2020-21, an increase of over 17% from 2019-20. There also continues to be strong growth in new townhome and multi-family projects that could produce enrollment gains. Recent figures allow us to segregate how many new students are generated from townhomes and to calculate a separate impact fee for

those jurisdictions that have a separate townhome fee category. In Spring of 2020, approximately 13 students were generated for every 100 townhomes. As of Spring 2022, 38 students are generated per 100 townhomes. See **Appendix A**.

Growth in NSD has largely been accommodated in recent years through the construction of new capacity, limiting waivers at most schools, converting special-use portables and non-classroom spaces into classroom space, adjusting boundaries, and adding portable classrooms. The 2022 bond projects, approved by our voters in February 2022, will provide for permanent capacity additions at all grade levels, as further detailed in this CFP.

Overview of the Northshore School District

The Northshore School District spans 60 square-miles and primarily serves five jurisdictions: King County, Snohomish County, the City of Bothell, the City of Kenmore, and the City of Woodinville. There are some addresses located in the cities of Brier, Kirkland and Redmond, but they are either in areas not expected to experience any new residential development or in very small areas with previously developed residential areas. For the purposes of the District's CFP and long-term projections, those areas are considered de minimis impacts on NSD's grade bands. The King-Snohomish County line divides NSD such that roughly two-thirds of the District's is in King County and one-third in Snohomish County. According to the 2020 Census, the District has a total population of approximately 147,920. The Snohomish County portion of the district population was 63,086. The King County portion of the District population was 84,834.

The District currently operates twenty elementary schools, six middle schools, and four comprehensive high schools. NSD also has one choice high school (Innovation Lab High School), one alternative high school (Secondary Academy for Success), a hybrid combination of choice school with high levels of parent involvement (Northshore Networks), a home school program, (Northshore Family Partnership Program), a virtual learning school (Northshore Virtual Program) and an early childhood center (Sorenson Early Childhood Center). The current grade configuration is K-5, 6-8, and 9-12.

The Urban Growth Area boundary (UGA) divides NSD, creating capacity utilization challenges. As new residential development continues to occur even at more moderate rates, land for potential new school sites is scarce. King County does not allow for school siting outside the UGA, but Snohomish County does provide for school siting via a Conditional Use Permit (CUP) process.

The District participates in regular conversations regarding school facilities planning with jurisdictions in King County pursuant to regular meetings held to comply with Policy PF-22 (formerly PF-19A) of the King County Countywide Planning Policies. Snohomish County's

Countywide Planning Policies direct jurisdictions in Snohomish County to “ensure the availability of sufficient land and services for future K-20 school needs.” Policy ED-11. NSD appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Student Enrollment Trends and Forecasts

Section 2

Background

Elementary enrollment in NSD has grown steadily in recent years, with a slight dip in 2020 and 2021 reflecting the global pandemic. Growth increases in recent years are a result of larger birth cohorts and a consistent increase in new residential development. This wave of elementary enrollment growth is beginning to move into the middle and high school grades and is anticipated to continue over the next 10 years. At the same time, elementary enrollment is projected to grow within and beyond the next 5 years.

Similar to past years, this year's forecasts consider regional and local trends in population growth, birth rates, and housing development, analyzing corresponding projections down to the school feeder pattern level. Growth rates were adjusted based on permit information specific to those respective areas. The resulting trends were used to further refine the projection methodology for enrollment forecasts. The following section describes in more detail the assumptions used to develop the forecast and compares the result of this projection to other available methodologies.

While new single family home construction and sales within NSD are continuing to slow, there is a marked increase in the development of townhomes and continued strong development of apartments and condominiums. The new townhome developments include units with 3 bedrooms or more. From a student generation perspective, we are seeing enrollment numbers affected, with increases in the number of students generated from townhomes that have completed construction, been sold, and become occupied.

As of December 2021, development data shows 887 single family homes and 3,537 multi-family units in the development pipeline within the District. It is significant to note that this data excludes short plat development. As larger tracts of land become more rare for developers to acquire within NSD, there is a trend towards more short plats as infill lots are purchased. The increasing number of short plats may impact enrollment, increasing what is forecast. In addition, if future adjustments are made to the UGA in Snohomish County, larger lots will once again become available to developers with the potential of increased NSD student enrollment.

Methodology

Numerous methodologies are available for projecting long-term enrollments. The most common method is known as the cohort survival method. This method tracks groups of students through

the system and adjusts the population to account for the average year-to-year growth. For example, this year's fourth grade is adjusted based on the average enrollment trend of the past in order to estimate next year's fifth grade enrollment. This calculation method considers the past five years' trends to determine the average adjustment factor for each grade, or cohort. The method works well for all grades except kindergarten, for which there is no previous year data. For kindergarten, two methodologies are generally used:

- A linear extrapolation from the previous five years of kindergarten enrollment, assuming that there is a trend;
- Or, alternatively, a comparison of the kindergarten enrollment to births from five years prior can be used to calculate a "birth-to-K" ratio. For example, kindergarten enrollment in 2021 is divided by the total births in King and Snohomish counties in 2016 to produce a "birth-to-K" ratio. The average ratio for the last five years can then be applied to births in subsequent years to estimate kindergarten enrollment.

OSPI uses the cohort survival method to predict enrollment for all school districts in the state for the limited purpose of the School Construction Assistance Program. The cohort survival method generally works well for districts that have a consistent trend of gradual increases or declines in enrollment. It is less reliable in districts where spikes in demographic trends (especially a marked increase or decrease in new housing) can lead to dramatic swings in enrollment from one year to the next. In addition, the use of the linear extrapolation method at the kindergarten level can result in a distorted trend since it does not consider changes in birth rate trends. The impact of COVID on enrollment has contributed to the cohort survival method being unreliable. This may continue for several years.

NSD works with professional demographers to combine the cohort survival methodology with other information about births, housing, regional population trends, mobility, and even trends in service area and private school enrollment. This modified cohort survival methodology provides a more accurate forecast. **Table 2.1** is a forecast of enrollment based on this model.

[Mid-Range Enrollment Forecast](#)

Table 2.1

Grade	Actual	Projections					
	21/22	22/23	23/24	24/25	25/26	26/27	27/28

1	1,603	1,743	1,807	1,735	1,726	1,710	1,671
2	1,751	1,658	1,818	1,866	1,792	1,780	1,763
3	1,776	1,746	1,674	1,836	1,894	1,815	1,803
4	1,733	1,784	1,772	1,699	1,873	1,928	1,847
5	1,727	1,731	1,795	1,784	1,719	1,891	1,947
6	1,791	1,729	1,757	1,807	1,810	1,734	1,907
7	1,745	1,801	1,760	1,773	1,825	1,831	1,754
8	1,786	1,751	1,795	1,763	1,777	1,832	1,838
9	1,800	1,843	1,775	1,829	1,797	1,814	1,870
10	1,850	1,792	1,836	1,776	1,831	1,802	1,820
11	1,653	1,734	1,689	1,740	1,684	1,739	1,711
12	1,582	1,605	1,692	1,657	1,706	1,654	1,709
Total	22,419	22,553	22,772	22,551	22,999	23,061	23,212
K - 5	10,212	10,298	10,468	10,506	10,571	10,655	10,603
6 - 8	5,322	5,281	5,312	5,343	5,412	5,397	5,499
9 - 12	6,885	6,974	6,692	7,002	7,018	7,009	7,110

The modified cohort survival methodology in **Table 2.1** shows continued enrollment increases within the District through the six-year planning period. The methodology uses a “mid-range” projection. In total, the projected K-12 increase in enrollment is 793 students over the six-year period. The District’s enrollment projections were updated in February 2022 to consider the impacts of the global pandemic. NSD intends to watch enrollment closely and will update the projections and related planning as necessary based on actual results. However, given recent trends and knowledge of development within the pipeline, the District expects to see continued growth throughout the six-year planning period and beyond.

[Long Range Forecasts](#)

The modified cohort methodology described above was extrapolated to 2031 to produce a longer-range forecast (**Table 2.2**). Using this methodology, NSD’s enrollment shows continued growth from 2022 to 2031 of 839 students. This longer range model assumes that the state forecasts of births, K-12 growth, and continued population growth for the Puget Sound are reasonably accurate.

FTE Enrollment Forecast

Table 2.2

Grade Band	October 2022	October 2027	October 2031
Elementary	10,298	10,603	10,231
Middle	5,281	5,499	5,558
High	6,974	7,110	7,601
Total	22,553	23,211	23,390

Future growth trends are uncertain. Changes in population growth, fertility rates, new housing development slowdown, or a sharp downturn in the economic conditions in the Puget Sound region could have a major impact on long term enrollment, making it significantly lower or higher than the current estimate. Given this uncertainty, the current forecast should be considered a reasonable estimate based on the best information available, but subject to change as newer information about trends becomes available.

Snohomish County/OFM Forecasts

Using OFM/County data provided by Snohomish County, NSD projects a 2044 student FTE population of 30,924 (**Table 2.3**). For the six year period between 2016 and 2021, the District's actual enrollment averaged 39.7% of the OFM/County population estimates. Based on the 2020 Census data, the District's actual enrollment averaged 35.54% of the OFM/County population estimates. However, these figures are misleading in that they assumes that all of the District's students reside in Snohomish County. This is not the case given that the NSD's boundaries include both King and Snohomish County. As such, the projections are highly speculative and are used only for general planning and comparative purposes.

FTE Enrollment Forecast – 2044 OFM Estimates*

Table 2.3

Grade Band	October 2021	October 2028	October 2044
Elementary	10,212	11,319	14,086
Middle	5,322	5,914	7,341
High	6,885	7,648	9,497
Total	22,419	24,881	30,924

*Assumes that percentage per grade span will remain constant through 2044

District Standard of Service

Section 3

Primary Objective

Optimizing student learning is the heart of what the Northshore School District strives for in establishing its service standard for classroom capacity utilization. This requires a constant review and assessment of programs, curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Equitable access to programs for all students is also a school board driven goal and NSD is continually striving for process and methods in which all students have the ability to access the best learning environment. Additional variables include changes in mandatory requirements dictated by the state, such as full-day kindergarten, Core 24 graduation requirements, and reduced K-3 class size ratios. These elements, as well as demographic projections, are weighed when determining service levels.

Existing Programs and Standards of Service

NSD currently provides traditional educational programs and nontraditional programs (**Table 3.1**). These programs are reviewed regularly to determine the optimum instructional methods and learning environments required at each school, with added attention to equitable access across the District. The required space for these programs, as well as any supporting space, is determined by noise, level of physical activity, teacher to student ratios, privacy, and/or the need for physical proximity to other services/facilities. Adequate space must exist for program flexibility, differing learning styles, program changes, project/problem-based learning and pre- and post-school activities. For example, service level capacities in rooms utilized in high schools for programs such as Special Education Functional Skills and Academics would reflect lower capacities of the defined service levels (**Table 3.2**), with eight students per classroom instead of 26 students per classroom.

Special teaching stations and programs offered by NSD at specific school sites are included in **Table 3.1**.

College in the High School		X

Capacity is affected at those buildings that house special programs. These programs usually require space modifications and frequently have lower class sizes than other, more traditional programs; this potentially translates into greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year. (As programs move or grow, depending on space needs, capacity can change or decline in a school).

Teaching station loading is identified in **Table 3.2**. Class sizes are averages based on actual utilization as influenced by state funding and instructional program standards. NSD's standard of service is based on state and/or contractual requirements.

Standard of Service – Class Size

Snohomish County requires that the District's plan include a report regarding NSD's compliance with the District's minimum levels of service for the school years 2019-2021. **Table 3.3** shows the District's average students per teaching station as a measurement of its minimum levels of service as of October 1 for each year.

Average Students per Scheduled Teaching Station (In classrooms without special programs)

Table 3.3

9 – 12	303	26	21.8	22.5	22.7
Total / Average	1,004		23.3	23.1	22.9

Capital Facilities Inventory

Section 4

Inventory

Under the Growth Management Act, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. **Capacity** is a term that can be used in 3 different ways:

Design Capacity: The number of students a school was designed to hold.

Instructional Capacity: The design capacity is affected at buildings that house special programs or different grade levels. Some programs and grades require space modifications and frequently have lower class sizes. As a result, instructional capacity – **The true, functional capacity of a school for students**, is often lower than design capacity.

For example, an elementary school with 10 classrooms may have been designed for 300 students with 25 students in a classroom. However, the site might not be able to support the design capacity of 300 students for two primary reasons. The first is class size for different grade levels. For example, full-day Kindergarten classes become overloaded at 23 students. Instructional capacity can also be affected by programs in a school. Special Education often has several programs offered at each site. These programs have limited class sizes. The instructional capacity of a school must be recalculated every year to reflect the number of classrooms at different grade levels and the classrooms that hold special programs with limited class sizes.

Available Capacity: When the enrollment of a school is subtracted from the instructional capacity, the remaining number is the available capacity. **It represents how much room is left at a school for new students.**

If the available capacity is a negative number, that represents a school that has exceeded its instructional capacity. When this happens, class sizes may rise, or teachers may need to travel to find a room that is available for instruction.

Table 4.2 summarizes the instructional capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other District owned facilities.

Variations in student instructional capacity between schools are often a result of the number of specialized programs offered at specific schools. As explained above, these programs require additional classroom space per student, which can reduce the instructional capacity of the school. Further, instructional capacities will change from year-to-year based on changes to existing programs, projected programs, and the resulting required space needed to deliver the instructional model at each site. To monitor this, and for use in preliminary instructional capacity planning, NSD establishes classroom design capacities for planning purposes. This is the maximum number of students a school can accommodate based on a standard room capacity. These figures are then compared to the actual room utilization rate on a regular basis.

Capacity takes into consideration the specific programs that take place in each of the classrooms in a school every year. For example, capacities in rooms utilized for programs such as special education would reflect the defined service levels (**Table 3.2**), ranging from 8 to 26 students per room. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. In secondary schools, the utilization percentage may be higher. Capacities are updated annually in the CFP to reflect current program needs and classroom utilization.

Schools

Table 4.1 Illustrates the age of each school, the dates of modernizations and added capacity, and the historical timeline. **Table 4.2** shows the District's permanent and portable instructional student capacity for the 2021-22 school year.

**Sorenson Early Childhood Center serves students age 3-5 yrs and does not provide any capacity for K-5 grades;

*Bear Creek provides programs for the Northshore Family Partnerships/Northshore Network and does not provide regular capacity.

Relocatable Classroom Facilities (Portables)

Portable classrooms provide temporary/interim classroom space to house students until permanent facilities can be constructed and to prevent over-building of permanent capacity. Traditionally, NSD has aimed to keep its total capacity provided by portables at or below 10% to a maximum of 15% percent of its total capacity. This percentage fluctuates, impacted by growth and changes in instructional program needs.

Table 4.2 shows all instructional portables at each school. Not included in the interim classroom capacity are portables that are used for daycare, PTA, conference rooms/resource rooms, OT/PT, LAP, science or other labs, ASB, music or other non-instructional uses.

Portables are utilized to help achieve efficient facility utilization and balance economic costs while encouraging innovation and new approaches, particularly for non-core or pilot programs. The District regularly reassesses the need for portables as permanent capacity is built or other changes occur (such as revisions to instructional programs. At this time, NSD anticipates a continued need for portables as a part of the capacity solution. In some cases, portables may be moved from one grade band to another to address capacity needs. Future updates to the CFP will note any adjustments.

A typical portable classroom provides capacity for approximately 25 students at the elementary level or 26 at the secondary level. Portables are used to meet a variety of instructional needs. Of the 147 portable classrooms that the District owns, 121 are currently being used as classrooms for scheduled classes. The District's Enrollment Demographics Task Force (EDTF) has recommended that the District begin to phase out the increasing number of older portables as capacity allows, but with recent growth trends, the District continues to be reliant on this interim capacity. All portables are inspected regularly and upgraded as needed, or as systems require.

The lifespan of a portable is approximately 20 years and up to 25 years with aggressive maintenance. Portables have been an effective method for meeting capacity needs in a district that has experienced rapid increases in enrollment. At this time, the District's inventory is aging with 97 of the 147 portables the district owns having reached 20 years of service. By 2026, 97 portables will be 20 years or older. Although the current bond replaces 67 aging portables, total capacity at schools with portables will be impacted in the future as the need to retire aging portables increases.

Other Facilities

In addition to 34 school sites, the District owns and operates sites that provide transportation,

administration, maintenance and operational support to schools. The District also holds undeveloped properties that were acquired for potential development of a facility for instructional use. An inventory of these facilities is provided in **Table 4-4** below.

Inventory of Support Facilities & Underdeveloped Land

Table 4.4

Facility Name	Building Area (Sq. Feet)	Site Size (Acres)
Administrative Center (Monte Villa)	49,000	5
Support Services Building	41,000	5
Warehouse	44,000	2
Transportation	39,000	9
20521 48 th Dr SE (includes Ruby Bridges ES and remaining undeveloped portion planned for a future school site)		33
19827 88 th Ave NE		10
18416 88 th Ave NE		50,011 sf
15215, 15123, 15127 84 th Ave NE & 8305 NE 153 rd St (4 parcels adjacent to Moorlands ES)		49,993 sf
Paradise Lake Site*		26
Wellington Hills Site**		104

*Note: Paradise Lake property is located in King County, outside the Urban Growth Area. In 2012, King County prohibited the siting of schools outside the UGA; although the property was purchased prior to that change, it is not currently useable as a potential school site.

**Note: The Wellington property is located in Snohomish County, adjacent to the Maltby Urban Growth Area. In 2015, a purchase and sale agreement was signed and entered into between Snohomish County and Northshore School District, but legal challenges ensued and closing of the property sale was delayed until October 2017. A settlement agreement was reached in 2019 and recorded under Snohomish County Recording No. 201906210221. The District has no active project at this site, nor are there definitive short or long-term plans for siting a school at this location.

Projected Facility Needs

Section 5

Planning History

In 2001, Northshore School District Board of Directors established a board policy to create a standing, community-based taskforce to study District-wide enrollment and demographic changes and the resulting impacts on school capacity needs, instructional programs, or other variables. The Enrollment Demographic Task Force (EDTF) examines enrollment projections, capacity considerations, student impacts, cost impacts, program needs, etc., and boundary adjustments based upon the above. The committee recommends potential solutions to the school board. If approved by the board, these recommended actions are implemented by the District and incorporated into the Capital Facilities Plan.

Using October 2021 enrollment figures, the District enrollment grew by over 1.5% or 1,134 new students during the previous six year period. The high school grade span has grown by over 740 new students in that time; an 11% increase. As noted above, October 2021 enrollment figures were down slightly due to the impacts of the pandemic but are expected to return to pre-2020 figures post-pandemic. To accommodate the District's growth, EDTF identified mitigation strategies (in order of priority) for the District to employ when addressing existing and future capacity needs (**Table 5.1**).

EDTF continues to monitor development and growth across the district and has noted that although development in some northern areas of the District is slowing down, development is increasing in the western and southern regions. EDTF applies capacity mitigation tools to ease overcrowding and balance enrollments where and when necessary, making recommendations to the Superintendent and School Board.

Capacity Mitigation Tools

Table 5.1

Shorter Lead Time
Utilize existing spaces more creatively
Adjust waiver policies
Adjust program placements
Move classes to schools with capacity
Move existing portables
Install new portables
Lease space
Longer Lead Time
Adjust service areas
Adjust feeder patterns
New construction
Acquire new property

Planned Improvements - Construction to Accommodate New Growth

The continued increase in enrollment has fully exhausted capacity increases from relocating building programs, portable additions, grade reconfiguration, and boundary changes. Growth continues to outpace school capacity. Growth has been concentrated in northern, central, and southern portions of NSD and is accelerating at the secondary level.

The \$425 million 2022 capital bond approved by voters includes eight new projects to add permanent capacity across the District at all grade levels. Note that the number of new permanent classrooms is an early planning estimate. The District will be spending the next year working with architects and contractors to develop specific plans for each site. NSD will also take into consideration recent and future growth within each school's boundaries to inform any potential changes to the number of proposed classrooms.

- Inglemoor High School (IHS)
 - IHS currently has 6 portables on site. 5 portables are used for regular instruction and 1 is used for SPED instruction. The modernization project proposes replacing the 6 portables on site with permanent classrooms, and adding 10 additional permanent classrooms. Also proposed are a new athletic support space, a new commons, and a new main office complex to support increased capacity.
- Leota Middle School (LMS)
 - LMS currently has 7 portables on site. 4 portables are used for regular classroom instruction, 1 is used for SPED instruction, and 2 are for auxiliary classes. The modernization project proposes replacing the 7 portables with permanent classrooms, and adding 5 additional permanent classrooms. Also proposed are a new gym, commons, main office complex and improved site circulation to support

increased capacity.

- Kenmore Elementary School
 - Kenmore currently has 9 portables on site. 5 portables are used for regular instruction. 4 are used for specialists and programs. The modernization project
 - proposes replacing the 9 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, commons, main office complex, a fully inclusive playground, and improved site circulation to support increased capacity.

- Crystal Springs Elementary School
 - Crystal Springs currently has 10 portables on site. 8 portables are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.

- Fernwood Elementary School
 - Fernwood currently has 18 portables on site. 14 are used for regular classroom instruction. 1 is a restroom portable. 3 are used for specialists and programs. The modernization project proposes replacing those 18 portables with permanent classrooms, adding 3 additional permanent classrooms including the conversion of the restroom portable to a classroom. Also proposed are an inclusive playground and improved site circulation to support increased capacity.

- Maywood Hills Elementary School
 - Maywood Hills currently has 10 portables on site. 8 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 10 portables with permanent classrooms, and adding 2 additional permanent classrooms. Also proposed are a new gym, a fully inclusive playground, and improved site circulation to support increased capacity.

- Woodin Elementary School
 - Woodin currently has 6 portables on site. 4 are used for regular classroom instruction. 2 are used for specialists and programs. The modernization project proposes replacing those 6 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground

and improved site circulation to support increased capacity.

- Sorenson Early Childhood Center (SECC)
 - SECC currently has 2 portables on site. Both are used for regular instruction. The modernization project proposes replacing those 2 portables with permanent classrooms, and adding 6 additional permanent classrooms. Also proposed are a fully inclusive playground to support increased capacity.

Long-term projections from 2021 – 2031 indicate growth of 971 new students, with fluctuation of growth at all grade levels, by 2031. The District will continue to monitor the factors that shape our capacity needs, i.e.; statewide legislative changes, instructional delivery requirements, the economy, changes in planned land use, changes in mandated program requirements, equitable access to programs, building permit activity, and birth rates, in order to help ensure needed instructional space is available when/where needed and will pursue additional land acquisition should construction of additional sites be necessary to accommodate those needs. Future updates to this CFP will include relevant information.

Table 5.2 summarizes the schools that will be undergoing construction as a result of the 2022 bond. Each project will include both capacity for growth and modernization of key systems and structures.

Planned Construction Projects

Table 5.2

Growth Projects	Estimated Completion Date	Projected Student Capacity Added
Partial renovations and permanent capacity additions to Crystal Springs, Fernwood, Kenmore, Maywood Hills, and Woodin Elementary	2025	1,608
Construct and equip Part 1 of Leota Middle School phased replacement	2026	312
Construct and equip Part 1 of Inglemoor High School phased replacement	2026	416
Classroom addition at Sorenson Early Childhood Center	2025	128

Portable Location Adjustments

Where growth results in capacity deficits at a specific grade band, portables may be relocated from one grade band to another to assist with meeting enrollment projections. In addition, the District may adjust program space within permanent facilities to move programs to portables to free up space in permanent facilities for additional regular student capacity. See **Section 4** for more detail regarding portables.

Capacity Analysis

The District's six-year capacity analysis, considering projected enrollment and planned new capacity, is shown in **Table 5.3**. As with any long-term projections, many assumptions and estimates on housing must be made, increasing the risk associated with the accuracy of enrollment forecasts. However, NSD has trended above mid-range projections in years past, and with a continuing strong real estate and development market, the District will plan for continued growth as projected.

NSD is in a planning year for the modernizations of 8 school sites. Estimated capacities for each site are used in this CFP. Adjustments may be made to capacities during planning in response to updated development data within a school's boundary area, and/or other needs that impact enrollment and capacity.

School Enrollment and Instructional Classroom Capacity

Table 5.3

*Actual October 2021 enrollment

This table does not include new or relocated portable facilities over the six-year planning period; it also does not include the addition of permanent capacity at Sorenson Early Childhood Center.

For long-term planning purposes, a ten-year capacity analysis can be created. **Table 5.4** utilizes demographers' 10-year NSD forecast to create the best possible projection given the data available to us. Note that the longer the period of time that a forecast covers, the less accurate it becomes. Factors such as unforeseen changes in population and development may impact actual results. An example of this is the recent COVID-10 pandemic and the influence it has had on demographic and development trends in school districts, including NSD.

Year 2031 – Long-term Forecast of Enrollment and Instructional Capacity

Table 5.4

Assumes added new capacity projects included in this CFP but no future near-term planning in process and no adjustment of portable facilities.

Grade Level	Enrollment	Permanent Capacity	Total Capacity	Permanent surplus/(short)	Total surplus/(short)
Elementary	10,231	9,284	11,732	(947)	1,501
Middle School	5,558	5,262	5,782	(296)	224
High School	7,601	6,465	6,621	(1,136)	(980)
Total	23,390	21,011	24,135	(2,379)	745

Planned Improvements – Existing Facilities (Building Improvement Program)

In a number of sites (not identified for additional capacity in the 2022 bond) where the existing facility layout (building envelope) meets instructional needs and building structural integrity is good, individual building systems (such as HVAC, mechanical, flooring, roofing) are identified for replacement or modernization to extend the life of the overall site and ensure optimal learning environment for students. NSD continues to implement building improvement projects funded as a part of the 2018 Bond, and is currently planning implementation of improvements identified within the 2022 capital bond. See **Table 6.1** in Section 6.

Capital Facilities Financing Plan

Section 6

Funding of school facilities is typically secured from a number of sources including voter-approved bonds, state matching funds, impact fees, and mitigation payments. Each of these funding sources are discussed below.

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond issue. Bonds are sold as necessary to generate revenue. They are then retired through collection of property taxes. The District's Board of Directors, upon the recommendation of the Capital Bond Planning Task Force, sent a \$425 million bond measure to the voters in February 2022 to provide funding for growth-related projects included in this Capital Facilities Plan, as well as other District-wide building improvement or capital infrastructure needs. The voters approved the bond measure by 61.2%.

State School Construction Assistance

State financial assistance comes from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominantly from the sale of renewable resources (i.e. timber) from state school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation funds or the Superintendent of Public Instruction can prioritize projects for funding.

State financial assistance is available for qualifying school construction projects, however these funds may not be received until two to three years after a matched project has been completed. This requires the District to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds. These funds, as with all state funded programs, have been reduced, and given the current state budget, could be eliminated or eligibility criteria and funding formulas revised. Eligibility for state match is continually reviewed. Future updates to this plan will include updated information, as it becomes available.

Impact Fees
(See Section 7 for background, detail, and methodology)

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities such as schools) needed to accommodate growth from new development. The statute is clear that the financing of needed public facilities to serve growth cannot be funded solely by impact fees but rather must be balanced with other sources of public funds.

Budget and Financing Plan

Table 6.1 is a summary of the budget that supports the Capital Facilities Plan. Each project budget represents the total project costs which include; construction, taxes, planning, architectural and engineering services, permitting, environmental impact mitigation, construction testing and inspection, furnishings and equipment, escalation, and contingency. The table also identifies 2022 and future planned expenditures. It does not include project expenditures from previous years.

* Signifies schools with growth-related capacity improvements and eligible for funding with impact fee revenue. Listed modernization projects include added permanent capacity for growth.

Note: Costs for Inglemoor High School do not reflect expenses from years prior to 2021-22. Total project cost is \$110M.

Impact Fees

Section 7

School Impact Fees under the Washington State Growth Management Act

The Growth Management Act (GMA) authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate growth/new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands. The basic underlying assumption is that growth pays for growth.

Enrollment declines beginning around 2002 kept NSD from meeting the required eligibility criteria to collect school impact fees. The District is spread across two counties and also across the urban growth boundary. While development picked up on the north end of NSD, there was still ample capacity in the southeast area of the District. Because of the statutes and ordinances governing school district eligibility criteria to be able to collect school impact fees, NSD was not able to re-establish eligibility for collection of school impact fees until 2016. King County and the cities of Bothell, Kenmore, and Woodinville have all adopted the District's 2021 CFP and are collecting impact fees identified in that plan. Snohomish County adopted the District's 2020 CFP and is collecting impact fees associated with that plan. We anticipate all the above jurisdictions to consider and adopt this 2022 CFP this fall either as part of their regular budget cycle.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees may be calculated based on the District's cost per dwelling unit to purchase/acquire land for school sites, make site improvements, construct schools and purchase/install temporary facilities (portables), all for purposes of growth-related needs. The costs of projects that do not add growth-related capacity are not included in the impact fee calculations. The impact fee formula calculates a "cost per dwelling unit". New capacity construction costs addressing NSD's growth-related needs, are used in the calculation

A student factor (or student generation rate) is used to identify the average cost per NEW dwelling unit by measuring the average number of students generated by each NEW (sold and occupied) housing type (single family dwelling units, townhomes, and multi-family dwelling units). The student generation rate used is an actual generation of students by grade level that came from new development over a period of five (5) years. NSD updated its student factor for both single family and multi-family and townhome units in early 2022. The townhome generation

factor will be new with this 2022 plan. The student factor analysis for NSD is included in **Appendix A**. The student factors in Appendix A are based on all newly constructed, sold, and occupied units.

The District's student-generation rate for multi-family dwelling units is much lower than the student generation rate for single-family homes. As available land for single family development is beginning to be constrained, and multi-family development – most notably townhomes, is increasing, we anticipate continued increases in student generation rates from those units over time. In particular, the District's student generation rates, when isolated for townhomes only, show that more students are residing in those units than in traditional multi-family units. NSD is requesting that each jurisdiction, if necessary, consider amendments to the school impact fee ordinance to recognize the impacts of townhome units as different from apartments and condominium units.

As required under GMA, credits are applied for State School Construction Assistance Funds to be reimbursed to the District, where expected, and projected future property taxes to be paid by the dwelling unit toward a capital bond/levy funding the capacity improvement. Formula driven fees are identified in **Appendix B**.

Snohomish County Code (30.66C) and King County Code (21A.43) establish each jurisdiction's authority to collect school impact fees on behalf of the District. The formula for calculating impact fees is substantively identical in each code (with one exception that Snohomish County has separate fees for Multi-Family Units with 1 bedroom or less and Multi-Family Units with 2+ bedrooms). The codes of each of the cities are similar to those of the counties. These codes establish the conditions, restrictions, and criteria for eligibility to collect impact fees. Both counties define a school district's "service area" to be the total geographic boundaries of the school district.

NSD updates the Capital Facilities Plan on an annual basis and carefully monitors enrollment projections against capacity needs. If legally supportable, the District requests its local jurisdictions to collect impact fees on behalf of NSD.

The impact fees requested in this year's Capital Facilities Plan are based on growth related construction projects, including added permanent capacity at: Inglemoor High School (416), Leota Middle School (312), Kenmore Elementary (264), Crystal Springs Elementary (288), Fernwood Elementary (480), Maywood Hills Elementary (288), and Woodin Elementary (288).

Proposed School Impact Fees
 Snohomish County, City of Woodinville^

Single Family Units	\$17,963
Townhome Units	\$7,152
Multi-Family Units – 2+ Bedrooms	\$0

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

^The District does not request that Snohomish County adopt a MF 1 bedroom/less fee on its behalf.

Proposed School Impact Fees
 King County, Bothell, Kenmore*

Single Family Units	\$17,963
Multi-Family Units (incl. Townhomes)	\$2,625

School impact fee rates stated above reflect a discount of 50% as required by the King County and Snohomish County codes.

*If Bothell or Kenmore determine the Snohomish County model, segregating townhomes separately from other multi-family units, then the Snohomish County fee proposal applies.

For information regarding the Marysville School District 2022-2027 Capital Facilities Plan, contact the Finance and Operations Department, Marysville School District No. 25, 4220 80th Street N.E., Marysville, Washington 98270-3498. Telephone: (360) 965-0094.

SECTION ONE: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (the “GMA”) outlines 13 broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Marysville School District (the “District”) has prepared this Capital Facilities Plan (the “CFP”) to provide Snohomish County (the “County”), the City of Marysville (the “City”), and the City of Everett (“Everett”) with a schedule and financing program for capital improvements over the next six years (2022-2027).

In accordance with the Growth Management Act, adopted County policy, Snohomish County Ordinance Nos. 97-095 and 99-107, and the City of Marysville Ordinance Nos. 2306 and 2213, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary schools, middle level schools, and high schools).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- Where applicable, a calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in Appendix F of Snohomish County's General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate

their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (OFM) population forecasts. Student generation rates must be independently calculated by each school district.

- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with Chapter 82.02 RCW. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.

Overview of the Marysville School District

The District encompasses most of the City of Marysville, a small portion of the City of Everett, and portions of unincorporated Snohomish County. The District's boundaries also include the Tulalip Indian Reservation. The District encompasses a total of 72 square miles.

The District currently serves an approximate student population of 9,587 (February 1, 2021 FTE enrollment) with ten elementary schools, four middle level school, and four high schools (including two comprehensive high schools). For the purposes of facility planning, this CFP considers grades K-5 as elementary school, grades 6-8 as middle level school, and grades 9-12 as high school. The District also operates the Early Learning Center, housing ECEAP (Early Childhood Education and Assistance Program) as well as special education preschool programs.

The District has experienced enrollment declines in recent years, with the COVID-19 pandemic accelerating previously anticipated declines. The District intends to monitor enrollment particularly closely and will make adjustments as necessary should recent trends begin to change as the pandemic wanes, as growth continues in the District, and/or in response to any other circumstance influencing District enrollment. While the District is not requesting school impact fees as a part of this CFP update, this scenario could change as student enrollment growth changes. Future updates to the CFP will include relevant information.

Facilities and Capacity Needs

The District encounters a variety of issues that affect the capital facilities planning process. Historically, affordable housing (as compared to Seattle and adjacent cities) in the District tended to draw young families, which puts demands on the school facilities. The 2005 amendments to the Snohomish County Comprehensive Plan expanded the Marysville urban growth boundary to include an additional 560.4 acres zoned for residential development. Also, a significant amount of acreage already within the Marysville UGA was rezoned to accommodate more density in housing developments. Initially, there was little housing growth in the Marysville School District boundaries. Between 2017 and 2021, single family permit activity started to pick up, as well as some activity, though at lower numbers, in multi-family unit development. The District is watching this pipeline carefully so that it may make adjustments as necessary should new

development planning start to shift toward more expected residential development within the District.

In February of 2006, the District's voters approved a school construction bond for approximately \$118 million. The bond helped to pay for the construction of Marysville Getchell High School and Grove Elementary School. The District also used the bond proceeds to acquire future school sites. In 2014, District voters approved a \$12 million technology (and a replacement levy was approved in 2018). The District presented a \$120 million capital levy measure to the voters in February 2020 to fund school safety and security improvements and to rebuild Cascade and Liberty Elementary Schools. The District failed to receive sufficient votes for approval of the capital levy proposal. There are no currently anticipated bond or capital levy proposals. The District's Board of Directors will evaluate the scope and timing of future proposals.

Welcome to the Marysville School District No. 25

Revised July 2011

SECTION 2 -- EDUCATIONAL PROGRAM STANDARDS

The District acknowledges and realizes that classroom population impacts the quality of instruction provided. School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables).

In addition to student population, other factors such as collective bargaining agreements, government mandates, and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, remediation, alcohol and drug education, computer labs, music, art, and other programs. These programs can have a significant impact on the available student capacity of school facilities.

District educational program standards may change in the future as a result of changes in the program year, special programs class sizes, grade span configurations, and use of new technology, as well as other physical aspects of the school facilities. The State Legislature's requirements for full-day kindergarten and reduced K-3 class size impact school capacity and educational program standards. The District has implemented full-day kindergarten classes and K-3 class size reduction. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

Within the context of this topic, there are at least three methodologies that can be applied to capacity forecasting. Those include a maximum class size based on contractual obligations, a maximum class size target, and a minimum service level.

The District has internal targets, which predicate staffing decisions. These internal targets are the District's preferred capacity levels. In comparison, class size based on a maximum number of students is predicated on contractual language in the contract with the Marysville Education Association. This contract specifies a maximum number of students in a classroom above which the District must fund additional classroom assistance. Finally, the minimum service level represents the capacity level that the District will not exceed. This is determined by an average maximum number of students in a classroom by grade (for K-8 classes) or by a course of study (for the 9-12 grade level). For example, grade 8 may have an average class size (and minimum level of service) of 32 students. Some classrooms might have less than 32 students and some classrooms might have more than 32 students; however the average of grade 8 classrooms district-wide will not exceed 32 students. At the secondary school level, some classes will exceed 34 students (band, physical education, etc.). This minimum service level is defined for core classes and is an average of all core classes for the secondary level. Table 1 compares class size methodologies.

Table 1
Class Size Methodologies

Grade Level	District Targets	Maximum (Per Contract)	Minimum Service Level
Kindergarten	17	24	27
Grades 1 – 3	17	24	27
Grades 4 – 5	25	27	30
Grades 6 – 8	25	30	32
Grades 9 – 12	25	30	34

Educational Program Standards Based Upon Internal Targets

Elementary Schools:

- Average class size for Kindergarten should not exceed 17 students.
- Average class size for grades 1-3 should not exceed 17 students.
- Average class size for grades 4-5 should not exceed 25 students.
- Special education for students may be provided in regular classes when inclusion is possible and in self-contained classrooms when this is the most appropriate option available.

Middle and Junior High Schools:

- Average class size for grades 6-8 should not exceed 25 students.
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of available teaching stations depending on the physical characteristics of the facility and program needs.
- Special education for students may be provided in regular classes when inclusion is possible and in self-contained classrooms when this is the most appropriate option available.
- Identified students will also be provided other programs in “resource rooms (i.e., computer labs, study rooms), and program specific classrooms (i.e., music, drama, art, home and family education).

High Schools:

- Average class size for grades 9-12 should not exceed 25 students.
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of available teaching stations depending on the physical characteristics of the facility and program needs.

- Special education for students may be provided in regular classes when inclusion is possible and in self-contained classrooms when this is the most appropriate option available.
- Identified students will also be provided other programs in “resource rooms (i.e., computer labs, study rooms), and program specific classrooms (i.e., music, drama, art, home and family education).

For the school years of 2019-20 and 2020-21, the District’s compliance with the minimum educational service standards was as follows (with MLOS set as applicable for those school years):

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	29	23.87	32	25.42	34	21.04

* The District determines the reported service level by adding the number of students at each grade level and dividing that number by the number of teaching stations (excludes portables).

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	29	22.17	32	25.04	34	21.07

* The District determines the reported service level by adding the number of students at each grade level and dividing that number by the number of teaching stations (excludes portables).

SECTION THREE: CAPITAL FACILITIES INVENTORY

Under the GMA, public entities are required to inventory capital facilities used to serve existing development. The purpose of the facilities inventory is to establish a baseline for determining what facilities will be required to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms (portables), undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See Section Two: Educational Program Standards.* A map showing locations of District facilities is provided on page 4.

Schools

See *Section One and Two* for a description of the District's schools and programs.

School capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program and internal targets. It is this capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Tables 2, 3, and 4. In addition to the school capacity inventory identified in these tables, the District operates the Early Learning Center (ECEAP program and special education preschool programs).

Relocatable Classrooms (Portables)

Relocatable classrooms (portables) are used as interim classroom space to house students until funding can be secured to construct permanent classrooms. The District currently uses 60 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. A typical relocatable classroom can provide capacity for a full-size class of students. Current use of relocatable classrooms throughout the District is summarized in Table 5.

Table 2
Elementary School Inventory

<i>Elementary School</i>	<i>Site Size (Acres)</i>	<i>Building Area (sq ft)</i>	<i>Teaching Stations*</i>	<i>Permanent Capacity**</i>

* Each portable is 600 square feet. The District's relocatable facilities identified above have adequate useful remaining life and are evaluated regularly.

**Used for regular classroom capacity.

***The relocatables referenced under "other relocatables" are used for special pull-out programs.

[^]Four portables are located at the Early Learning Center (on the Marysville Tulalip Campus) and used for pre-kindergarten/early learning instruction. These portables are not available for regular K-5 capacity.

Support Facilities

In addition to schools, the District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 6.

***Table 6
Support Facility Inventory***

<i>Facility</i>	<i>Building Area (Square Feet)</i>	<i>Site Size (Acres)</i>
Service Center		11.35
Administration	33,028	
Grounds	3,431	
Maintenance	12,361	
Engineering	7,783	
Warehouse	16,641	

Land Inventory

The District owns a number of undeveloped sites. An inventory of these sites is provided in Table 7.

***Table 7
Undeveloped Site Inventory***

<i>Site</i>	<i>Site Size (Acres)</i>
152nd Street Site	35.02
84 th Street NE Site – Parcel 0500	4.5
84 th Street NE Site – Parcel 0300	27.75
84 th Street NE Site - Parcel 0700	30.40

Development on some of these sites may be restricted due to significant wetlands, limited site sizes, high utility costs, and/or inappropriate locations. In addition to these sites, the District owns one site of less than two acres that is currently under contract for sale.

SECTION FOUR: STUDENT ENROLLMENT TRENDS AND PROJECTIONS

Generally, enrollment projections using historical calculations are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions, land use, and demographic trends in the area affect the projection. Monitoring birth rates in the County and population growth for the area are essential yearly activities in the ongoing management of the CFP. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projections.

For this year's CFP update, the District considered several sources for enrollment projections. See Appendix A.

- The Office of the Superintendent of Public Instruction (OSPI) prepares six year projections based upon the cohort survival method. Using this methodology, a total of 8,531 (headcount) students are expected to be enrolled in the District by 2027, a decrease from the October 2021 headcount enrollment of 9,897. The projected decline reflects the District's experience in recent years of declining enrollment growth at all grade levels (though predominantly at the elementary school level). Notably, the cohort survival method does not anticipate changing development patterns, so it may not capture new development from increased (or decreased) residential construction activity and as anticipated in the Snohomish County/OFM projections. Also, the cohort projections do not consider the impact of anomalies in enrollment, such as the COVID-19 pandemic and its effects on enrollment during the last two years. As such, the OSPI projections are only reliable in school districts with little to no variation in enrollment patterns.
- The District in May of 2019 received a modified enrollment forecast from a professional demographer, William L. (Les) Kendrick, Ph.D. The Kendrick analysis utilized historic enrollment patterns, demographic and land use analysis based upon information from Snohomish County and the City of Marysville, census data, Snohomish County/OFM forecasts and trends, and Washington State Department of Health birth data, all as current as of early 2019. The low range projection of the Kendrick analysis show a total enrollment of 10,532 expected by the 2027-28 school year. However, the 2019 Kendrick projections were performed prior to the pandemic and also do not reflect updated birth rate and development information. In view of current enrollment data and information, the District believes that the 2019 Kendrick projections are optimistic.
- The District reviewed the population-based enrollment projection estimated for the District using OFM population forecasts for Snohomish County. The County provided the District with the estimated total population in the District by year. Using 2020 census data, the District's student enrollment constituted approximately 12.93% of the total population in the District. Assuming that between 2022 and 2027, the District's enrollment will continue to constitute 12.93% of the District's total population and using OFM/County data, OFM/County methodology projects a total enrollment of 10,502 in 2027.

- The District prepares its own enrollment forecast for internal planning purposes. This forecast is based on recent trends in enrollment, information relevant to the current planning year, current birth rate data, and known development information. The District's projections factor in up to date and key information relative to the District's expectation of student enrolment in the near future including (1) the pandemic's effect on District enrollment, including analysis of students returning to in-person learning as based on February 2022 counts, and (2) recent Snohomish County birth rate data, which declined between 2016 and 2020. The District's projections are also the only projections that use a true full-time equivalent count, more reflective of District facilities planning. Using these projections, the District anticipates flat enrollment through the six year planning period, with total student enrollment of 9,245 by 2027.

The comparison of the projected enrollment under each methodology is contained in Table 8.

Table 8
Projected Student Enrollment**
2022-2027

<i>Projection</i>	<i>2021*</i>	<i>2022</i>	<i>2023</i>	<i>2024</i>	<i>2025</i>	<i>2026</i>	<i>2027</i>	<i>Actual Change</i>	<i>Percent Change</i>

OSPI Cohort	9,897	9,724	9,486	9,289	9,043	8,737	8,531	(1,366)	(13.8)%
District (Kendrick)	9,897	10,113	10,141	10,256	10,335	10,373	10,532	635	6.42%
District (Internal Analysis)	9,785	9,245	9,245	9,245	9,245	9,245	9,245	(540)	(5.52)%

*Actual October 2021 Headcount for all but District's internal analysis, which uses actual October 2021 FTE enrollment; note that February 2022 FTE enrollment dropped to 9,587

**All projections, with the exception of the District's Internal Analysis use a headcount enrollment assumption. The District finds that a full-time equivalent analysis is more appropriate for assessing facility needs.

Based upon the immediate dynamics of the District, as discussed above, the District has chosen to follow the District's own internal analysis for purposes of this CFP update. The District will closely monitor enrollment and, if actual enrollment notably shifts from the projections, will update the CFP accordingly.

2044 Enrollment Projections

Student enrollment projections beyond 2027 and to the future are highly speculative. Assuming that the District's enrollment will continue to constitute 12.93% of the District's population through 2044, and assuming that the ratio of students in each grade level stays constant, the projected enrollment by grade span *based upon the County/OFM projections* is as follows:

Table 9
Projected FTE Student Enrollment – County/OFM
2044

<i>Grade Span</i>	<i>Projected FTE Enrollment</i>
Elementary (K-5)	5,571
Middle Level School (6-8)	2,917
High School (9-12)	3,668
<i>TOTAL (K-12)</i>	12,156

Again, these estimates are highly speculative given current information and the length of the planning period. The District will continue to monitor enrollment growth and make appropriate adjustments in future updates to the CFP.

SECTION FIVE: CAPITAL FACILITIES PROJECTIONS FOR FUTURE NEEDS

Projected available student capacity was derived by subtracting projected student enrollment from existing school capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). Capacity needs are expressed in terms of “unhoused students”

Table 10 identifies the District’s current permanent capacity needs (based upon information contained in Table 12):

Table 10
Unhoused Students – Based on October 2021 Enrollment/Capacity

<i>Grade Span</i>	<i>Unhoused Students/(Available Capacity</i>
Elementary Level (K-5)	(415)
Middle Level (6-8)	--
High School Level (9-12)	--

Assuming no permanent capacity additions or adjustments, Table 11 identifies the additional permanent classroom capacity that will be needed in 2027:

Table 11
Unhoused Students – 2027

<i>Grade Span</i>	<i>Unhoused Students/(Available Capacity</i>
Elementary Level (K-5)	(277)
Middle Level (6-8)	--
High School Level (9-12)	--

Interim capacity provided by relocatable classrooms is not included, though the District expects to continue to use relocatable classrooms to provide for a portion of the capacity needs. Relocatables may be moved from one grade level to another grade level as needed for capacity. (Information on relocatable classrooms by grade level and interim capacity can be found in Table 5.)

The District has no currently planned construction projects during this six-year planning period. Future updates to this CFP will include any identified projects.

Table 12 - Projected Student Capacity***Elementary School -- Surplus/Deficiency***

	21-22*	2022	2023	2024	2025	2026	2027

*Actual February 2022 enrollment

**Does not include relocatable capacity.

SECTION SIX: FINANCING PLAN***Planned Improvements***

At the present time, the District does not have specific plans to construct new permanent capacity during the six-year planning period. The District may, as needed purchase and site new portable facilities to address capacity needs. The District intends to monitor closely enrollment and capacity needs and will update the CFP in the future as appropriate.

Financing for Planned Improvements

Where applicable, funding for planned improvements is typically secured from a number of sources including voter-approved bonds, State match funds, and impact fees.

General Obligation Bonds/Capital Levies: Bonds are typically used to fund construction of new schools and other capital improvement projects, and require a 60% voter approval. Capital levies require a 50% voter approval and can be used for certain capital improvement projects. The District presented a \$120 million capital levy in February 2020 to the voters to fund safety/security upgrades and to replace Cascade and Liberty elementary schools. The levy failed to reach the required threshold for approval. Future updates to the CFP will include information related to future bond planning and projects.

State School Construction Assistance Funds: State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is eligible for State School Construction Assistance funds for certain projects at the 61.87% funding percentage level.

Impact Fees: Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued. *See Section 7 School Impact Fees.*

The Six-Year Financing Plan shown on Table 13 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include bonds, State School Construction Assistance funds, and impact fees. The Financing Plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. As previously stated, with the exception of portable purchases, the District currently does not plan to construct new permanent capacity projects within the six-year planning period.

*Table 13 - Capital Facilities Financing Plan***Improvements Adding Permanent Capacity (Costs in Millions)****

District-wide										

SECTION SEVEN: SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees in Snohomish County and the City of Marysville

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Data must be accurate, reliable, and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or one-bedroom; and multi-family/two or more-bedroom.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

The City of Marysville also adopted a school impact fee program consistent with the Growth Management Act in November 1998 (with subsequent amendments).

Methodology Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Code and the Municipal Code for the City of Marysville. Where applicable, the resulting figures are based on the District’s cost per dwelling unit to purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities (portables), all as related to growth needs. As required

under the GMA, credits are applied in the formula to account for State School Construction Assistance Funds to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit.

When an impact fee is calculated, the District's cost per dwelling unit is derived by multiplying the cost per student by the applicable student generation rate per dwelling unit. The student generation rate is the average number of students generated by each housing type -- in this case, single family dwellings and multi-family dwellings. Pursuant to the Snohomish County and the City of Marysville School Impact Fee Ordinances, multi-family dwellings are separated into one-bedroom and two-plus bedroom units. The District does not request school impact fees from the City of Everett as the portion of the District within City of Everett boundaries is largely undevelopable.

The District, for information purposes only, conducted a student generation study for this CFP even though it is not requesting school impact fees. The result of that report are included in Appendix C. Future updates to this CFP, where impact fees are requested, will include an updated student generation rate study.

Proposed Marysville School District Impact Fee Schedule for Snohomish County and the City of Marysville

The District does not have capacity projects planned as a part of the 2022 CFP. See discussion in Section 6 above. As such, the District is not requesting the collection of impact fees as a part of this Capital Facilities Plan. The District expects that future project planning and stabilization of enrollment will lead to a renewed request for impact fees in future updates to the Capital Facilities Plan.

Table 12
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$0
Multi-Family (1 Bedroom)	\$0
Multi-Family (2+ Bedroom)	\$0

Blueline Job No. 22-038

Prepared by: Chase Killebrew, AICP

Reviewed by: Eric Jensen

This report shows the estimated number of students for each grade that is typically generated by different dwelling unit types within the Marysville School District (MSD). These student generation rates (SGRs) assist in predicting future enrollment for the short term and long-term planning horizons as development and redevelopment change the mix of housing types in the district. SGRs are also used in the school impact fee formula to determine the per dwelling unit cost of needed new school capacity.

This document describes the methodology used to calculate SGRs for the MSD and provides the findings of those calculations. SGRs were calculated for two types of residential construction: single-family detached and multifamily. Manufactured homes are included in the single-family detached classification. Single-family attached units such as condominiums, townhomes, and multiplexes are included in the multifamily classification.

Electronic records were pulled from the Snohomish County Assessor's FTP Data Downloads webpage. The specific dataset titled *Improvement Records* was filtered to only contain residential development data from the past 5 years (2017 – 2021). This table was brought into ArcGIS. Using a shapefile of the MSD boundary, all the records attached to parcels located within MSD were selected, creating a new MSD-specific table. The table was divided by single-family versus multifamily development. Then the multifamily list was divided by number of bedrooms, where all units containing 1 bedroom or less are grouped and units containing 2 or more bedrooms are grouped. No multifamily units containing 1 bedroom or less were found in this data. Also, no developments containing more units than a quadplex (four units) were found in this data.

The School District provided Blueline with student records data including the addresses and grade levels of all P2-12 students attending the Marysville School District as of January 2022. This data containing 10,682 students was reformatted so the addresses matched the style of the MSD Improvement Records address data.

There were 681 records indicating construction of new single-family detached units. These were cross-referenced and matched with the student records data, and the matches were tallied by grade level. The same was done for the 60 multifamily (2+ bedroom) records. The tables showing the results are shown on the following page.

	SINGLE-FAMILY	MULTIFAMILY (0-1 BR)	MULTIFAMILY (2+ BR)	TOTAL
UNITS CONSTRUCTED IN MSD (2017 - 2021)	687	0	60	747

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The purpose of this report is to update the Capital Facilities Plan (CFP) for the Snohomish School District pursuant to the Washington State Growth Management Act (GMA). The GMA includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This CFP is intended to provide the Snohomish School District (District), Snohomish County and other jurisdictions a description of the facilities needed to accommodate projected student enrollment at acceptable levels of service, including a detailed schedule and financing program for capital improvements, over the six year period of 2022-2027.

The CFP for the District was first prepared in 1994 in accordance with the specifications set down by the GMA. When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital plans in Appendix F of the General Policy Plan. This part of the plan established the criteria for all future updates of the District CFP that are to occur every two years. This CFP updates the 2020 GMA-based CFP that was adopted by the District and the County in 2020.

In accordance with GMA mandates, and Snohomish County Ordinance Nos. 97-095 and 99-107, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high school).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- If impact fees are requested, a calculation of impact fees to be assessed and supporting data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.
- The methodology used to calculate impact fees complies with the criteria and the formulas established by the County.

Overview of the Snohomish School District

The Snohomish School District serves a population of about 9,256¹ students in kindergarten through grade 12. The City of Snohomish has a population of approximately 10,126² people while the County encompasses a larger population of approximately 827,957³ people. The District is located 35 miles north of Seattle in the heart of the Puget Sound region of Washington.

The District has preschool and Early Childhood Education and Assistance Program (ECEAP) programs, ten elementary schools (one grades K-2, one grades 3-6 and eight grades K-6), two middle schools (grades 7 and 8), two high schools (grades 9-12), and one alternative school (grades 9-12) (AIM), and a Parent Partnership Program (PPP) (grades K-12).

The District opened Glacier Peak High School in the fall of 2008. The District’s voters approved a construction bond in May 2008 to fund the renovation of Snohomish High School, the replacement of Valley View Middle School, the expansion of Centennial Middle School, the replacement/expansion of Machias and Riverview elementary schools, construction of a new aquatics center, and technology improvements. All of these projects are now complete.

The District convened a Citizens’ Facility Advisory Committee (CFAC) in 2019 to review the conditions of our school buildings, explore demographic and enrollment projections and prioritize needs. Based on this information, the CFAC recommended, and the Board authorized for the February 2020 ballot, a \$470 million bond proposal to fund six elementary school replacement

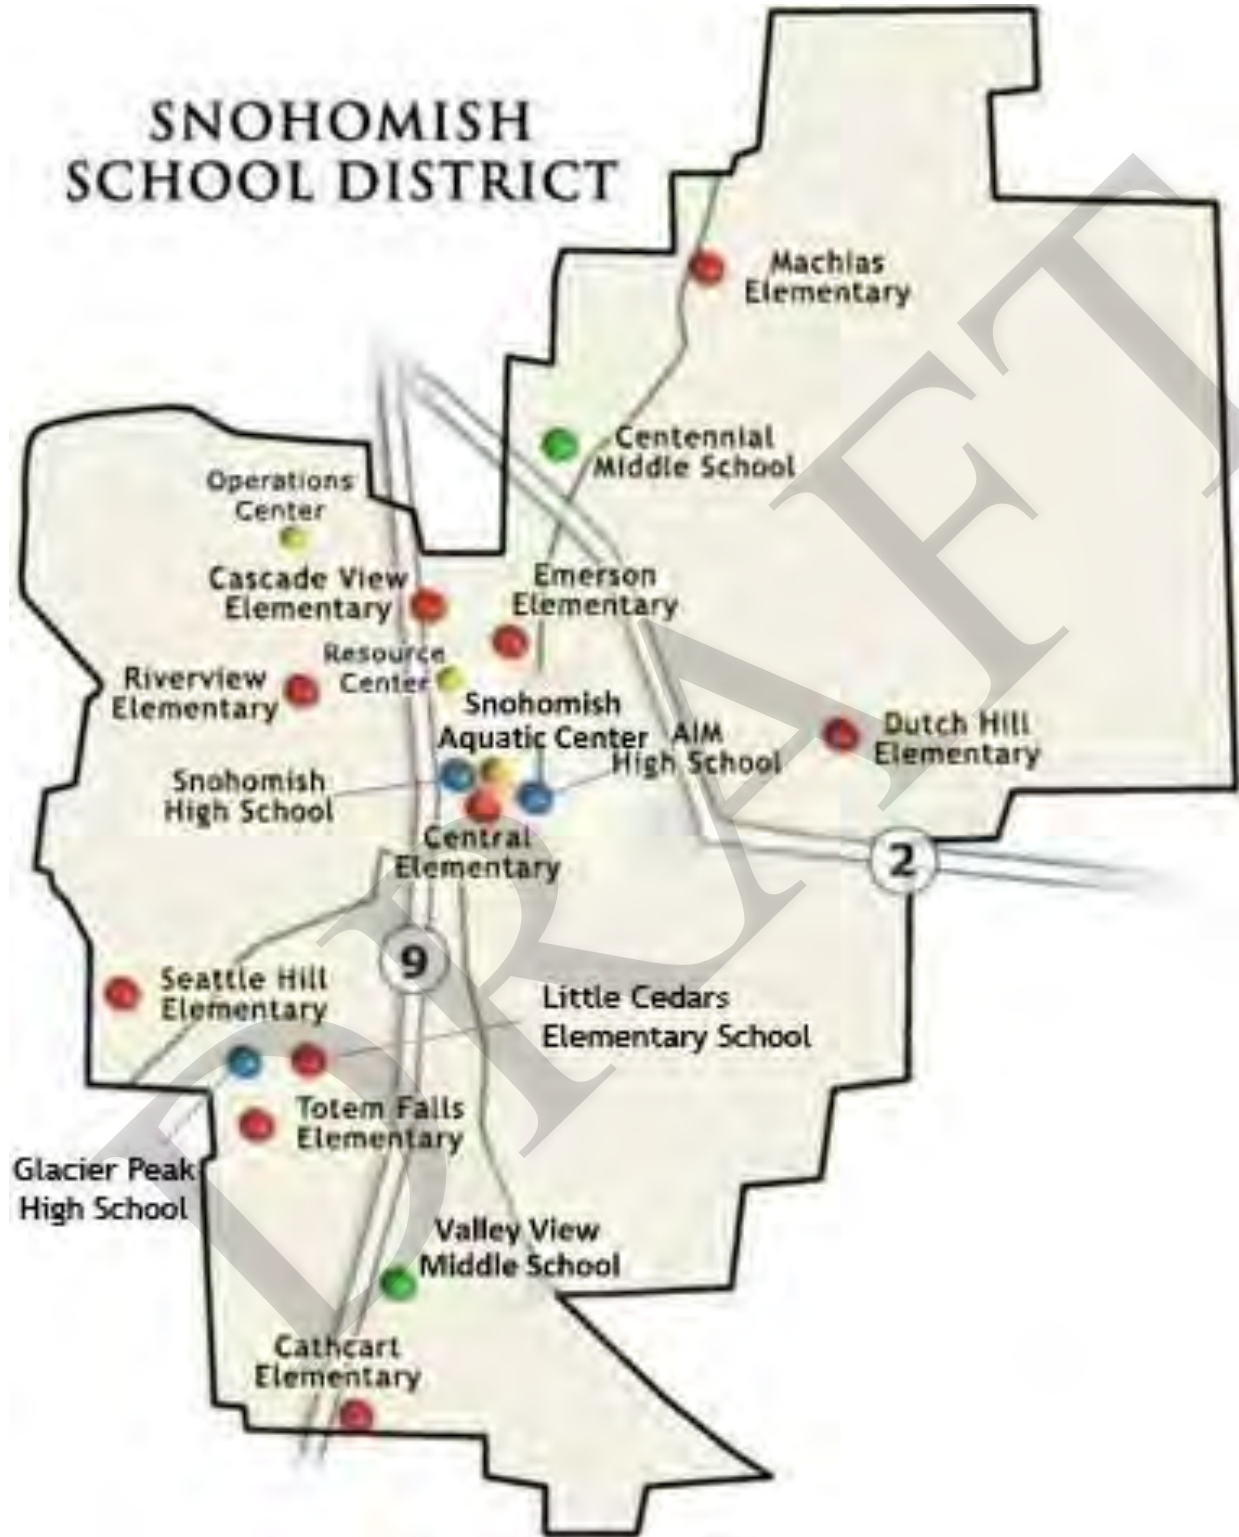

¹ October 1, 2021 FTE. Unless otherwise noted, all enrollment and student capacity data in this CFP is expressed in terms of FTE (full time equivalent).

² 2020 United States Census Bureau data

³ 2044 GMA Population Forecasts by School District – Adopted in the Snohomish County Countywide Planning Policies Appendix B (February 23, 2022).

projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District. The District failed to achieve the required 60% margin for bond approval. The District's Board of Directors is considering options for a subsequent bond proposal but has not made any decisions relative to the six year planning period of this CFP. However, the capacity needs remain, as reflected in this CFP. The District will update the CFP as needed, including consideration of an interim update, to reflect updated planning decisions.

**FIGURE 1
MAP OF DISTRICT¹**

¹ Please contact the District's Business Office at (360) 563-7240 for a copy of the map in color.

SECTION 2: DISTRICT STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The facility standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables). The facility standards that also typically drive facility space needs include educational program offerings, classroom utilization and scheduling requirements.

Facility Standards

Creating a quality educational environment is the first priority of the Snohomish School District. It is the District's standard at this time that all students will be housed in permanent facilities and that classes will be run in one shift on a traditional school year schedule. Because of fluctuations in student population as a result of growth from new development and changing age demographics in different parts of the District, portables (temporary housing) are used in some locations. Portables will not be added if the quality of education at the facility is deemed by the District to be compromised by either total school size, impact upon core facilities such as restrooms, library space, playground space, hallways, etc. In addition, some facilities may not accommodate portables because of limitations on septic capacity. When it is not possible to increase population at a particular site, even with portables, the District will have the option of redistricting school boundaries if space is available at other facilities. The District may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The use of temporary housing (portables) is considered strictly temporary and this CFP outlines the future permanent facility needs of the District. Where adequate funding for new construction is not available from State match and impact fees, local bonds will be sought to construct the new facilities.

The State Legislature's implementation of requirements for full-day kindergarten and reduced K-3 class size impact school capacity and educational program standards. The District implemented full-day kindergarten in 2018 at all elementary schools. The District has also reduced K-3 class sizes in accordance with state funding and has therefore adjusted educational program standards and school capacity inventory as necessary.

Facility Standards for Elementary Schools:

- The facility standard for grades K-3 is 18 students per classroom. For grades 4-6, the facility standard is 27 students per classroom.

- Optimum design capacity for new elementary schools is 600 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Facility Standards for Secondary Schools:

- The facility standard for grades 7-8 is 28 students per classroom (except PE and Music).
- The facility standard for grades 9-12 is 30 students per classroom (except PE and Music).
- Optimum design capacity for new middle schools is 900 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- Optimum design capacity for high schools is 1,500 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Educational Program Standards

In addition to factors that affect the amount of space required, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by non-traditional, or special programs, such as:

- Secondary Academy
- Special education pre-school
- Special education – inclusion, resource, moderate and profound
- Highly Capable
- Bilingual education
- Preschool and early childhood programs
- Technology education
- Title I / LAP
- Drug and alcohol education
- Vocational and career education
- Music
- Daycare – before and after school
- Primary Intervention Program
- Physical education
- Outdoor education
- Multi-age classrooms
- Secondary Academies
- Parent Partnership Program
- Alternative Education (AIM High, Re Entry Program)
- USDA Food Service Program
- Extra-Curricular, co-curricular and athletic programs

These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities.

Variations in student capacity between schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space that can reduce the permanent capacity of some of the buildings housing these programs. Some students, for example, leave their regular classroom for a short period of time to receive instruction in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs and, in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program standards will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, and use of new technology, as well as other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards that directly affect school capacity are outlined below for the elementary, middle and high school grade levels.

Educational Program Standards for Elementary Schools

- Educational programs will be provided in a single shift each day. The facility will be available after normal hours for extended learning opportunities (remedial education) for selected students.
- Educational programs will be provided on the traditional school year schedule.
- Special education for students may be provided in a self-contained classroom.
- All students may be provided music instruction in a separate classroom.
- All students may be provided physical education instruction outside their regular classroom and outside of the cafeteria space.
- All students may be provided technology instruction outside of their regular classroom.
- Specialized work spaces for testing, specialists (i.e. OTPT/SLP's/psychologists), remedial programs, small group tutoring, and ESL programs.

Educational Program Standards for Middle and High Schools

- Educational programs will be provided in a single shift each day. The facility will be available after normal hours for extra-curricular activities and for extended learning opportunities (remedial education) for selected students.
- Educational programs will be provided on a traditional school year schedule.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a workspace during planning periods, it is

not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity should be adjusted to reflect the use of one period per day for teacher planning.

- Special education for students may be provided in a self-contained classroom.
- Specialized work spaces for testing, specialists (i.e. OTPT/SLP's/psychologists), remedial programs, small group tutoring, and ESL programs.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Vocational Classrooms (i.e. business, manufacturing, biotechnology, CAD)
 - Program Specific Classrooms (i.e. music, drama, art, physical education, technology)
 - High School Academies
 - Alternative High School Programming

Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole, while meeting the District's paramount duties under the State Constitution. A boundary change or a significant programmatic change would be made by the District's Board of Directors following appropriate public review and comment.

The District's intent is to adhere to the target facility service standards noted above without making significant changes in program delivery. At a minimum, average class size in the grade K-8 classrooms will not exceed 35 students and average class size in 9-12 classrooms will not exceed 40 students. The foregoing average class sizes set forth the District's "minimum level of service." For purposes of this determination, the term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education, and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom or to classes held in assembly halls, gyms, cafeterias, or other common areas.

The minimum educational service standards are not the District's desired or accepted operating standard.

For the school years of 2019-20 and 2020-21, the District's compliance with the minimum educational service standards (as applicable for those years) is as follows:

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
*Snohomish No. 201	35	22.65	35	17.1	40	22.95

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
*Snohomish No. 201	35	20.63	35	16.53	40	22.46

*The District determines these figures by taking the sum of all students in regular classrooms at a grade level and dividing that by the number of teaching stations at that grade level.

SECTION 3: CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See* Section 2. A map showing locations of District facilities is provided as Figure 1.

Schools

The District currently has ten (10) elementary schools (one grades K-2, one grades 3-6 and eight grades K-6), two (2) middle schools (grades 7-8), and two high schools (grades 9-12). Machias and Riverview Elementary Schools and Valley View and Centennial Middle Schools were renovated and expanded in 2011 and 2012. The District had an additional facility, the Maple Avenue Campus (the former "Freshman Campus"), which was used as interim capacity to accommodate the District's renovation program, but it has been demolished and replaced by the Aquatic Center.

School capacity is based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. The school capacity inventory is summarized in Tables 1, 2, and 3.

Table 1
Elementary School Capacity Inventory

Elementary School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations(1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Cascade View	10.5	45,629	18	359	413	1990	yes
Cathcart	12.8	36,231	19	420	474	1994	yes
Central Primary	4.5	45,239	10	204	204	1994	yes
Dutch Hill	13.9	42,357	24	356	626	1985	yes
Emerson	6.9	40,038	13	375	375	1989	yes
Little Cedars	11.3	76,071	31	621	711	2007	yes
Machias	9.2	78,137	23	481	526	2011	yes
Riverview	9.6	78,740	25	515	542	2011	no
Seattle Hill	9.7	42,357	29	405	666	1982	yes
Totem Falls	10.0	44,877	18	376	376	1991	yes
Total		529,676		4,112	4,913		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that a teaching station may only be used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables and is based on target class sizes.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property

Table 2
Middle School Capacity Inventory

Middle School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations(1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Centennial	19.3	123,744	45	900	900	2011	yes
Valley View	38.6	168,725	45	950	950	2012	yes
Total		292,469		1,850	1,850		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that each teaching station is only used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property

Table 3
High School Capacity Inventory

High School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations (1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Snohomish H.S.	28.6	270,089	74	1,800	1,800	2012	No
Glacier Peak H.S.	50.9	245,229	74	1,500	1,692	2008	Yes
AIM Alternative(4)	3.25	13,873		100	100	2008	No
Total		529,161		3,400	3,592		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that each teaching station is only used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property.

(4) Note that the AIM Alternative High School is housed in the larger Parkway Facility. The Parkway Facility has both programmatic and non-programmatic uses including the Parent Partnership Program and the transition programs. The information here is specific to the AIM Alternative High School and not the entire Parkway Facility.

Portables

Portables are used as interim classroom space to house students until permanent classroom facilities can be provided and to prevent overbuilding. Portables are not a solution for housing students on a permanent basis. The District currently uses 68 portables at various sites throughout the District. The number of portables and their capacities are summarized in Table 4.

School Name	Table 4 Portables		Capacity
	Portables Classrooms	Portables Other	
ELEMENTARY:			
Cascade View	2	3	54
Cathcart	2	4	54
Central Primary	0	2	0
Dutch Hill	10	1	270
Emerson		4	0
Machias	2		45
Riverview	1	3	27
Seattle Hill	10	3	261
Totem Falls	0	6	0
Little Cedars	5	2	90
Total	32	28	801
MIDDLE:			
Centennial	0	0	0
Valley View	0	0	0
Total	0	0	0
HIGH			
Snohomish	0	0	0
Glacier Peak	8	0	192
Total	8	0	192
GRAND TOTAL	40	28	993

Each portable classroom is 896 square feet.

The District portables identified in Table 4 have adequate useful remaining life and are evaluated regularly.

Support Facilities

In addition to schools, the District owns and operates facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5
Support Facilities

Facility Name	Building Area (Sq. Ft.)	Site Size (Acres)
Operations Center^	15,073	6.3
Resource and Service Center	22,296	6.0
Parkway Campus	9,536*	3.25
District Warehouse	3,936	**
Aquatic Center	52,023	21.0

*^In process of demolition and replacement by summer 2022;
new square footage will equal 15,673 (including maintenance and transportation).
*Does not include education-related square footage.
**Located on the same site as Cathcart Elementary School.*

Land

The District currently owns two undeveloped sites. The District owns 15 acres in the Three Lakes area that could potentially be used as an elementary school site in the future (assuming that land use approvals/permits could be obtained); however that property does have some notable wetland concerns that are likely to limit potential use. The District also owns an additional 23 acres behind Valley View Middle School. The 23 acre site has topography concerns and accessibility issues that could limit the District's ability to use the property as an additional school site.

Leased Facilities

The District currently does not lease any facilities.

SECTION 4: STUDENT ENROLLMENT

Historical Trends

Student enrollment in the District remained relatively constant between 1973 and 1983 and increased steadily between 1984 and 1997. The growth in student enrollment leveled out in 1998 and dipped a little in 1999. Student enrollment then grew steadily and peaked in 2016. Enrollment in the 2020-21 and 2021-22 school years declined due to the impacts of COVID-19 pandemic on available school service models and related uncertainties. The district anticipates enrollment to rebound during the duration of this plan and return and exceed levels projected by our third-party demographer pre-COVID. See additional information below.

The October 1, 2021 FTE enrollment was 9,256. See Appendix A. Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions and demographic trends in the area affect the projection. Monitoring birth rates in Snohomish County and population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projection.

Six Year Enrollment Projections

The Office of the Superintendent of Public Instruction prepares cohort survival projections based upon historical enrollment trends. The OSPI projections are limited in that they fail to account for development fluctuations and other anomalies such as the COVID-19 pandemic. The OSPI projections also utilize a headcount factor that misrepresents students in Snohomish School District facilities. See Appendix A-1.

The District utilizes a third party demographer, FLO Analytics, for forecasting future enrollments. This methodology, a modified cohort survival method, considers historic enrollment, economic trends, housing projections and birth rates, among other factors. Based upon this analysis, the District expects enrollment to grow over the six year planning period to a total FTE student population of 9,666, or an increase of 4.43%. See Appendix A-2.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts for the County. In 2020, the District's enrollment constituted approximately 15.69% of the District's total population. Assuming that, between 2022 and 2027, the District's enrollment will continue to constitute 15.69% of the District's population, using OFM/County data, the District projects a total enrollment of 10,071 students in 2027. See Table 6.

Table 6									
Comparison of Student Enrollment Projections 2021-2027									
Projection	October 2021*	2022	2021	2022	2023	2024	2027	Projected Change 2021-2027	Percent Change 2021-2027
County/OFM**	9,256	9,392	9,528	9,664	9,800	9,936	10,071	815	8.8%
District	9,256	9,287	9,388	9,469	9,508	9,587	9,666	410	4.43%
Total Population Projection for District (OFM)							64,190		
Student to Population Ratio	15.69%								

*Actual Oct 2021 FTE

**Based on 2044 GMA Population Forecasts by School District (information provided by Snohomish County).

The District uses the FLO Analytics modified cohort survival projections for purposes of predicting enrollment during the six years of this Plan. As noted above, the growth factor used in the modified cohort survival projections reflects an analysis of historic average housing development and enrollment in the District within the last six years and knowledge of active known and proposed future housing developments, as well as factors in pandemic-related anomalies. The District believes this projection to be an accurate measure of future growth given that it is based upon actual circumstances within the District. The District will monitor actual enrollment over the next two years and, if necessary, make appropriate adjustments in the next Plan update.

2044 Enrollment Projections

Student enrollment projections beyond the 2027 school year are highly speculative. Using OFM/County data as a base, the District projects a 2044 student population of 11,374. This assumes that the District's enrollment will continue to constitute 15.69% of the District's total population through 2044.

The total enrollment estimate was broken down by grade span to evaluate long-term needs for capital facilities. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 7
Projected Student Enrollment
2044

Grade Span	FTE Enrollment – October 2021	Projected Enrollment 2044**
Elementary (K-6)	4,488	5,515
Middle School (7-8)	1,423	1,748
High School (9-12)	3,345	4,111
TOTAL (K-12)	9,256	11,374

Note: Snohomish County Planning and Development Services provided the underlying data for the 2044 projections.

**The 2044 enrollment projections assume that the percentage of students per grade level will remain consistent between 2021 and 2044.

SECTION 5: CAPITAL FACILITIES NEEDS

Facility Needs (2022-2027)

Schools

The projected available student capacity was determined by subtracting projected FTE student enrollment from permanent school capacity (i.e. excluding portables) for each of the six years in the forecast period (2022-2027).

Capacity needs are expressed in terms of “unhoused students.”

The method used to define future capacity needs assumes no new construction. For this reason, planned construction projects are not included at this point. This factor is added later (if applicable, see Table 11).

Projected future capacity needs are depicted on Table 8 and are derived by applying the District’s modified cohort projected enrollment to the permanent capacity existing in 2021. This table shows actual permanent space needs and the portion of those needs that are “growth related” for the years 2022-2027. Importantly, capacity needs existing as of the 2021 base year include impacts from recent growth within the District and should also be considered as growth-related.

Table 8
Additional Capacity Needs
2022-2027

Grade Span	2021*	2022	2021	2022	2023	2024	2027	Pct. Growth Related
Elementary (K-6)								
Total	376**	515	626	814	900	956	960	
Growth Related		139	250	438	524	580	584	60.83%
Middle School (7-8)								
Total	---	---	---	---	---	---	---	
Growth Related	--	--	--	--	--	--	--	--%
High School								
Total	---	---	---	---	---	---	---	
Growth Related	--	--	--	--	--	--	--	--%

* Actual 2021 FTE Enrollment

**Represents capacity needs (including those related to recent growth) existing as of the date of this Plan.

The capacity improvements that are required to meet the District's growth-related and non-growth related capacity needs are identified in Table 9-B below.

By the end of the six-year forecast period (2027-2028), additional permanent classroom capacity will be needed as follows:

Table 9
Estimated Unhoused Students (2027-2028)*

Grade Span	Unhoused Students (Post-2021 Growth Related)	Unhoused Students (Pre-2021 Existing and Recent-Growth Related)
Elementary (K-6)	584	960
Middle School (7-8)	--	--
High School (9-12)	--	--
TOTAL UNHOUSED (K-12)	584	984

*Reflects needs assuming no construction projects

It is not the District's policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms is not included in Table 9.

Recent and Planned Improvements

To accommodate growth in previous years, the District constructed and opened in 2007 a new elementary school and constructed a second high school, Glacier Peak, which opened in 2008. The District's voters approved a bond in May 2004 for these projects. In 2008, the District's voters approved additional construction bonds to replace and expand Machias and Riverview elementary schools to address the need for elementary student capacity. The 2008 Bond also provided for finishing the renovation of Snohomish High School, enlarging and modernizing Valley View Middle School and enlarging Centennial Middle School, and building a new aquatics center. The District also purchased an existing building, the "Parkway Building", and renovated it to house its AIM Alternative High School and Transition programs and the Parent Partnership Program.

The District convened a Citizens' Facility Advisory Committee (CFAC) in 2019 to review the conditions of our school buildings, explore demographic and enrollment projections and prioritize needs. Based on this information, the CFAC recommended, and the Board authorized for the February 2022 ballot, a \$470 million bond proposal to fund six elementary school replacement projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District. The District failed to achieve the required 60% margin for bond approval.

The District, in view of current and anticipated capacity needs, is continuing to plan for elementary capacity additions during the six-year planning period and beyond. The District may also purchase and site new portable facilities to address capacity needs.

Elementary Schools

The District opened Little Cedars Elementary School with a permanent capacity of 621, with 27 teaching stations. The elementary was completed and put into use for the 2007-08 school year. The total cost of the new elementary school was approximately \$25.0 million excluding the land purchase.

In addition, the District requested as a component of its 2008 bond proposal to replace and expand two elementary schools, Machias and Riverview. The projects are complete and the capacity of the two schools was expanded from 481 and 515 respectively to 600 each. These schools opened at the new capacity in January of 2011.

This CFP includes planning for classroom additions as a part of replacement projects at three elementary schools (Cathcart, Dutch Hill, and Seattle Hill) to address growth-related needs. The District is also considering replacement/addition projects at other elementary schools in the future (likely outside of the six year planning period). The replacement/addition projects are subject to funding secured through a future capital bond, all contingent on future action by the Board of Directors and ultimately the voters.

Middle Schools

To address overcrowding at the middle school level, the District constructed a new-in-lieu Valley View Middle School to house 950 students and modernized and enlarged Centennial Middle School to house 900 students. Centennial opened in 2011 and Valley View opened in fall 2012.

High Schools

The District opened Glacier Peak High School, with a capacity of 1,500 students in fall of 2008. In addition, the District recently completed modernization of the existing Snohomish High School campus. In the summer of 2012 three portables were added (total of six classrooms) at Glacier Peak. In 2017, an additional portable (two classrooms) was added at Glacier Peak.

Interim Classroom Facilities

The District plans to add two portables at Dutch Hill in the summer of 2022. It may purchase additional portables as needed to address growth-related needs (See Table 10). As necessary, the District will also continue to utilize portables as temporary housing of students until permanent facilities are constructed. However, it remains a District goal to house all students in permanent facilities.

SECTION 6: CAPITAL FACILITIES FINANCING

Funding of school facilities is typically secured from a number of sources including voter-approved bonds, State matching funds and development impact fees. Each of these funding sources is discussed in greater detail below.

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes. Snohomish School District voters rejected a bond proposal in 2001 for \$14.5 million to finance the acquisition of sites, planning for a new elementary school, planning for a new high school, the acquisition of modular classrooms, and the purchase and installation of technology equipment and systems.

Voters in May of 1998 approved a \$3.9 million bond issue to construct 11 classrooms at Snohomish High School and to finance mechanical and technology improvements throughout the District. On March 14, 2000, Snohomish School District voters approved a \$6.12 million dollar bond issue to finance certain capital improvements to the District's educational facilities.

In March of 2003, the school board appointed a 35-member Citizens' Facilities Advisory Committee to complete an in-depth study of our school facilities. This committee found that Snohomish schools are overcrowded and reported that half of our school buildings are at or near the end of their useful life. The committee then created a long-range plan for school construction, modernization and renovation to address those issues.

The District's voters approved a \$141,570,000 bond issue on May 18, 2004, to fund a new high school, modernization of the existing Snohomish High School, a new elementary school, acquisition of two new school sites, and various health, safety, energy and infrastructure improvements throughout the District.

The District's voters approved a \$261.6 million bond in May 2008 to fund the renovation of Snohomish High School, the renovation/expansion of Valley View Middle School, the expansion of Centennial Middle School, the replacement/expansion of Machias and Riverview elementary schools, construction of a new aquatics center, to make District-wide capital improvements, and acquire classroom technology to improve student learning.

The District's voters considered in February 2020 but did not approve a \$470 million bond proposal to fund six elementary school replacement projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District.

State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. For eligible projects, the District's funding level under the State School Construction Assistance fund is at the 56.04% percentage level (July 2022 release).

Impact Fees

Development impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued. (See additional discussion in Section 7).

Six Year Financing Plan

The Six-Year Financing Plan shown in Table 10 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components includes bond issues, impact fees, and State School Construction Assistance funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

The District's six year finance plan is outlined in Table 10 below.

As previously stated, the District's CFP plans for classroom additions at three elementary schools, all subject to future funding approval. The District will update this CFP, including a potential interim update, to reflect relevant planning decisions. The District anticipates also purchasing portable facilities to address growth-related capacity needs.

Table 10
Finance Plan
(dollars in 1,000s)

	2022	2023	2024	2025	2026	2027	Total Cost*	Bond/Levy/ Impact Fee	State Match	Other	Added Capacity	Growth Related
Dutch Hill Elementary Replacement/Addition				\$46,300	\$37,000		\$83,300	X	X		X	X
Cathcart Elementary Replacement/Addition				\$45,000	\$34,700		\$79,700	X	X		X	X
Seattle Hill Elementary Replacement				\$45,100	\$34,700		\$79,700	X	X		X	X
District wide Capital Improvements (including portables)	\$300	\$300	\$300				\$900	X			X	X

*Reflects total projects costs using 2022 estimates, subject to escalation. The impact fees are calculated based on construction costs only with anticipated escalation. Construction costs for the impact fee calculation reflect average construction costs of the four elementary school capacity projects.

**Except as specifically noted, does not reflect addition or removal of portable facilities over the planning period.

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to, as applicable, purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development. A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student factor methodology is contained in Appendix B. As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds expected to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit toward a capital levy/bond that would fund the capacity improvements. The costs of projects that do not add capacity are not included in the impact fee

calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs. Furthermore, impact fees will not be used to address existing deficiencies.

The District’s school impact fees are calculated to include the elementary capacity additions identified in this 2022 CFP update. See discussion in Sections 5 and 6 above.

Proposed Snohomish School District Impact Fee Schedule

Using the variables on the following page and formula described above, impact fees proposed for the District are summarized in Table 12. See also Appendix C.

Table 12
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$6,495
Multi-Family (1 Bedroom)	\$0
Multi-Family (2+ Bedroom)	\$4,514

**Table 12 reflects a 50% adjustment to the calculated fee as required by local ordinances.*

Project No.: F1371.01.004

Re: Student Generation Report—Snohomish School District

At the request of the Snohomish School District (District/SSD), FLO Analytics (FLO) has prepared an analysis of student generation rates (SGRs) resulting from recent (2017 to 2021) residential construction within the district. This document details the methodology FLO used to create the SGRs for SSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF housing, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was not included in the analysis. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace for SF housing with 1,172 units completed between 2017 and 2021. Over the same period, three comparatively small MF buildings were constructed. While the majority of the SF construction consisted of "Single Family Residence – Detached" (989 units), a variety of other SF use codes were also constructed, including duplexes, triplexes, condominiums, and manufactured homes (owned and leased). MF activity consisted of 17 2+ BR units.

All students (grades kindergarten [K] through 12) in the October 1, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of

Page 2

students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level residing within those units were determined. The 1,172 SF units were compared with the 9,257 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	61	0.052
1	42	0.036
2	47	0.040
3	48	0.041
4	28	0.024
5	33	0.028
6	29	0.025
7	31	0.026
8	34	0.029
9	27	0.023
10	32	0.027
11	20	0.017
12	21	0.018
K–5	259	0.221
6–8	94	0.080
9–12	100	0.085
K–12	453	0.387

*Calculated rates for grade level groups may not equal the sum of individual grade rates due to rounding.

Multifamily Developments

While SF data are nearly completely accounted for within the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Information gleaned from parcel records in conjunction with a visual remote analysis, allowed FLO to determine that MF construction (17 units) between 2017 and 2021 consisted of 2+ BR units. 161 Lincoln Ave is a mixed-use building with 8 units completed in 2021. 110 Lincoln Ave is a triplex building completed in 2017. Four students reside in these two (of three) MF buildings built between 2017 and 2021. 700 Pine Ave is a 6-unit building that does not currently house students.

Project No. F1371.01.004
Page 3

Multifamily 0–1 BR Rates

The multifamily 0–1 BR SGRs are calculated by comparing data on 0–1 BR multifamily units with the District's student record data. However, as of this writing, no 0–1 BR units were constructed from 2017 to 2021.

Multifamily 2+ BR Rates

The multifamily 2+ BR SGRs were calculated by comparing data on 2+ BR multifamily units with the District's student record data, and the number of students at each grade level living in those units was determined. It is estimated that 17 2+ BR units in total were constructed from 2017 to 2021. While the calculated multifamily 2+ BR SGRs are in line with what we would expect to see for this area, it should be noted that 17 units is not a statistically significant enough number upon which to reliably calculate a rate. These yields should be used with care.

Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 2+ BR Units

Grade	Matches	Rate
K	2	0.118

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The purpose of this report is to update the Capital Facilities Plan (CFP) for the Snohomish School District pursuant to the Washington State Growth Management Act (GMA). The GMA includes schools in the category of public facilities and services. School districts have adopted capital facilities plans to satisfy the requirements of the GMA and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This CFP is intended to provide the Snohomish School District (District), Snohomish County and other jurisdictions a description of the facilities needed to accommodate projected student enrollment at acceptable levels of service, including a detailed schedule and financing program for capital improvements, over the six year period of 2022-2027.

The CFP for the District was first prepared in 1994 in accordance with the specifications set down by the GMA. When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital plans in Appendix F of the General Policy Plan. This part of the plan established the criteria for all future updates of the District CFP that are to occur every two years. This CFP updates the 2020 GMA-based CFP that was adopted by the District and the County in 2020.

In accordance with GMA mandates, and Snohomish County Ordinance Nos. 97-095 and 99-107, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high school).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- If impact fees are requested, a calculation of impact fees to be assessed and supporting data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in the Snohomish County General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (“OFM”) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with the GMA. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.
- The methodology used to calculate impact fees complies with the criteria and the formulas established by the County.

Overview of the Snohomish School District

The Snohomish School District serves a population of about 9,256¹ students in kindergarten through grade 12. The City of Snohomish has a population of approximately 10,126² people while the County encompasses a larger population of approximately 827,957³ people. The District is located 35 miles north of Seattle in the heart of the Puget Sound region of Washington.

The District has preschool and Early Childhood Education and Assistance Program (ECEAP) programs, ten elementary schools (one grades K-2, one grades 3-6 and eight grades K-6), two middle schools (grades 7 and 8), two high schools (grades 9-12), and one alternative school (grades 9-12) (AIM), and a Parent Partnership Program (PPP) (grades K-12).

The District opened Glacier Peak High School in the fall of 2008. The District’s voters approved a construction bond in May 2008 to fund the renovation of Snohomish High School, the replacement of Valley View Middle School, the expansion of Centennial Middle School, the replacement/expansion of Machias and Riverview elementary schools, construction of a new aquatics center, and technology improvements. All of these projects are now complete.

The District convened a Citizens’ Facility Advisory Committee (CFAC) in 2019 to review the conditions of our school buildings, explore demographic and enrollment projections and prioritize needs. Based on this information, the CFAC recommended, and the Board authorized for the February 2020 ballot, a \$470 million bond proposal to fund six elementary school replacement

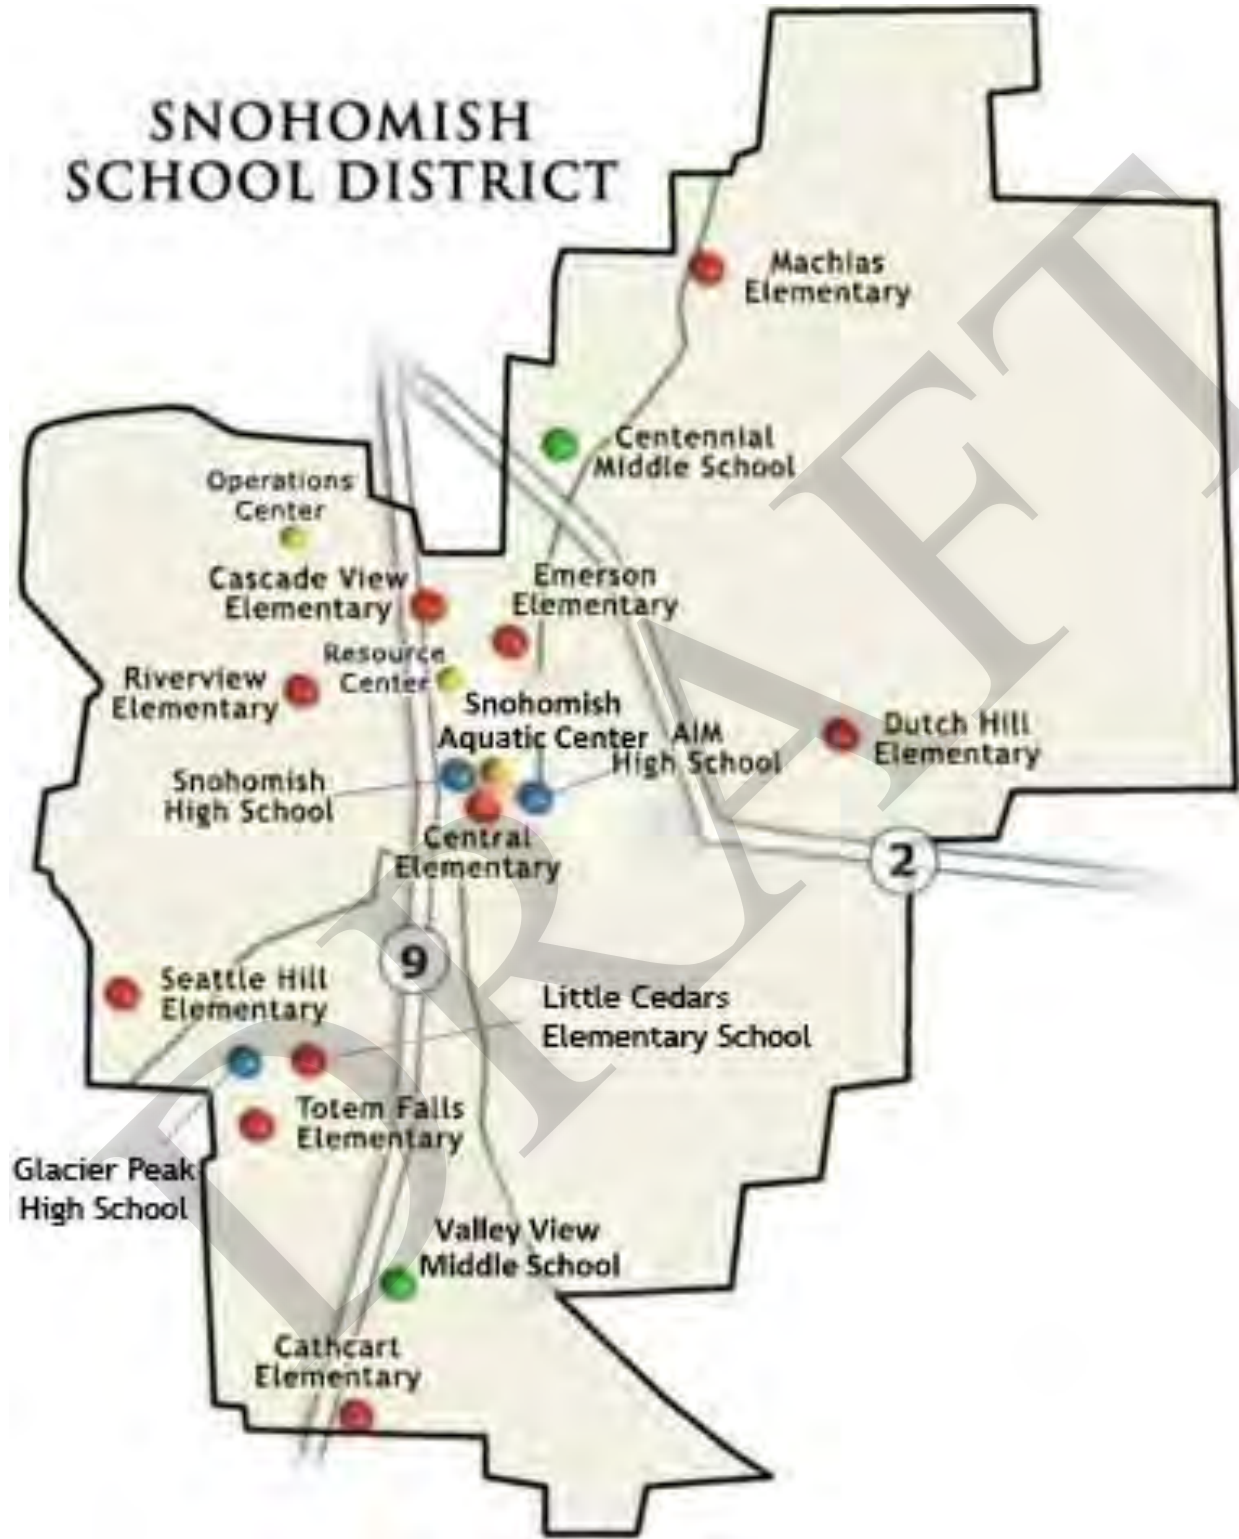

¹ October 1, 2021 FTE. Unless otherwise noted, all enrollment and student capacity data in this CFP is expressed in terms of FTE (full time equivalent).

² 2020 United States Census Bureau data

³ 2044 GMA Population Forecasts by School District – Adopted in the Snohomish County Countywide Planning Policies Appendix B (February 23, 2022).

projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District. The District failed to achieve the required 60% margin for bond approval. The District's Board of Directors is considering options for a subsequent bond proposal but has not made any decisions relative to the six year planning period of this CFP. However, the capacity needs remain, as reflected in this CFP. The District will update the CFP as needed, including consideration of an interim update, to reflect updated planning decisions.

**FIGURE 1
MAP OF DISTRICT¹**

¹ Please contact the District's Business Office at (360) 563-7240 for a copy of the map in color.

SECTION 2: DISTRICT STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The facility standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables). The facility standards that also typically drive facility space needs include educational program offerings, classroom utilization and scheduling requirements.

Facility Standards

Creating a quality educational environment is the first priority of the Snohomish School District. It is the District's standard at this time that all students will be housed in permanent facilities and that classes will be run in one shift on a traditional school year schedule. Because of fluctuations in student population as a result of growth from new development and changing age demographics in different parts of the District, portables (temporary housing) are used in some locations. Portables will not be added if the quality of education at the facility is deemed by the District to be compromised by either total school size, impact upon core facilities such as restrooms, library space, playground space, hallways, etc. In addition, some facilities may not accommodate portables because of limitations on septic capacity. When it is not possible to increase population at a particular site, even with portables, the District will have the option of redistricting school boundaries if space is available at other facilities. The District may also request that development be deferred until planned facilities can be completed to meet the needs of the incoming population; however, the District has no control over the ultimate land use decisions made by the permitting jurisdictions.

The use of temporary housing (portables) is considered strictly temporary and this CFP outlines the future permanent facility needs of the District. Where adequate funding for new construction is not available from State match and impact fees, local bonds will be sought to construct the new facilities.

The State Legislature's implementation of requirements for full-day kindergarten and reduced K-3 class size impact school capacity and educational program standards. The District implemented full-day kindergarten in 2018 at all elementary schools. The District has also reduced K-3 class sizes in accordance with state funding and has therefore adjusted educational program standards and school capacity inventory as necessary.

Facility Standards for Elementary Schools:

- The facility standard for grades K-3 is 18 students per classroom. For grades 4-6, the facility standard is 27 students per classroom.

- Optimum design capacity for new elementary schools is 600 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Facility Standards for Secondary Schools:

- The facility standard for grades 7-8 is 28 students per classroom (except PE and Music).
- The facility standard for grades 9-12 is 30 students per classroom (except PE and Music).
- Optimum design capacity for new middle schools is 900 students. However, actual capacity of individual schools may vary depending on the educational programs offered.
- Optimum design capacity for high schools is 1,500 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Educational Program Standards

In addition to factors that affect the amount of space required, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by non-traditional, or special programs, such as:

- Secondary Academy
- Special education pre-school
- Special education – inclusion, resource, moderate and profound
- Highly Capable
- Bilingual education
- Preschool and early childhood programs
- Technology education
- Title I / LAP
- Drug and alcohol education
- Vocational and career education
- Music
- Daycare – before and after school
- Primary Intervention Program
- Physical education
- Outdoor education
- Multi-age classrooms
- Secondary Academies
- Parent Partnership Program
- Alternative Education (AIM High, Re Entry Program)
- USDA Food Service Program
- Extra-Curricular, co-curricular and athletic programs

These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities.

Variations in student capacity between schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space that can reduce the permanent capacity of some of the buildings housing these programs. Some students, for example, leave their regular classroom for a short period of time to receive instruction in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs and, in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program standards will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, and use of new technology, as well as other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards that directly affect school capacity are outlined below for the elementary, middle and high school grade levels.

Educational Program Standards for Elementary Schools

- Educational programs will be provided in a single shift each day. The facility will be available after normal hours for extended learning opportunities (remedial education) for selected students.
- Educational programs will be provided on the traditional school year schedule.
- Special education for students may be provided in a self-contained classroom.
- All students may be provided music instruction in a separate classroom.
- All students may be provided physical education instruction outside their regular classroom and outside of the cafeteria space.
- All students may be provided technology instruction outside of their regular classroom.
- Specialized work spaces for testing, specialists (i.e. OTPT/SLP's/psychologists), remedial programs, small group tutoring, and ESL programs.

Educational Program Standards for Middle and High Schools

- Educational programs will be provided in a single shift each day. The facility will be available after normal hours for extra-curricular activities and for extended learning opportunities (remedial education) for selected students.
- Educational programs will be provided on a traditional school year schedule.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a workspace during planning periods, it is

not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity should be adjusted to reflect the use of one period per day for teacher planning.

- Special education for students may be provided in a self-contained classroom.
- Specialized work spaces for testing, specialists (i.e. OTPT/SLP's/psychologists), remedial programs, small group tutoring, and ESL programs.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Vocational Classrooms (i.e. business, manufacturing, biotechnology, CAD)
 - Program Specific Classrooms (i.e. music, drama, art, physical education, technology)
 - High School Academies
 - Alternative High School Programming

Minimum Educational Service Standards

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole, while meeting the District's paramount duties under the State Constitution. A boundary change or a significant programmatic change would be made by the District's Board of Directors following appropriate public review and comment.

The District's intent is to adhere to the target facility service standards noted above without making significant changes in program delivery. At a minimum, average class size in the grade K-8 classrooms will not exceed 35 students and average class size in 9-12 classrooms will not exceed 40 students. The foregoing average class sizes set forth the District's "minimum level of service." For purposes of this determination, the term "classroom" does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education, and other special program areas). Furthermore, the term "classroom" does not apply to special programs or activities that may occur in a regular classroom or to classes held in assembly halls, gyms, cafeterias, or other common areas.

The minimum educational service standards are not the District's desired or accepted operating standard.

For the school years of 2019-20 and 2020-21, the District's compliance with the minimum educational service standards (as applicable for those years) is as follows:

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
*Snohomish No. 201	35	22.65	35	17.1	40	22.95

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
*Snohomish No. 201	35	20.63	35	16.53	40	22.46

*The District determines these figures by taking the sum of all students in regular classrooms at a grade level and dividing that by the number of teaching stations at that grade level.

SECTION 3: CAPITAL FACILITIES INVENTORY

The facilities inventory serves to establish a baseline for determining the facilities necessary to accommodate future demand (student enrollment) at acceptable levels of service. This section provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards. *See* Section 2. A map showing locations of District facilities is provided as Figure 1.

Schools

The District currently has ten (10) elementary schools (one grades K-2, one grades 3-6 and eight grades K-6), two (2) middle schools (grades 7-8), and two high schools (grades 9-12). Machias and Riverview Elementary Schools and Valley View and Centennial Middle Schools were renovated and expanded in 2011 and 2012. The District had an additional facility, the Maple Avenue Campus (the former "Freshman Campus"), which was used as interim capacity to accommodate the District's renovation program, but it has been demolished and replaced by the Aquatic Center.

School capacity is based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. The school capacity inventory is summarized in Tables 1, 2, and 3.

**Table 1
Elementary School Capacity Inventory**

Elementary School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations(1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Cascade View	10.5	45,629	18	359	413	1990	yes
Cathcart	12.8	36,231	19	420	474	1994	yes
Central Primary	4.5	45,239	10	204	204	1994	yes

Emerson	6.9	40,038	13	375	375	1989	yes
Little Cedars	11.3	76,071	31	621	711	2007	yes
Machias	9.2	78,137	23	481	526	2011	yes
Riverview	9.6	78,740	25	515	542	2011	no
Seattle Hill	9.7	42,357	29	405	666	1982	yes
Totem Falls	10.0	44,877	18	376	376	1991	yes
Total		529,676		4,112	4,913		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that a teaching station may only be used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables and is based on target class sizes.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property

Table 2
Middle School Capacity Inventory

Middle School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations(1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Centennial	19.3	123,744	45	900	900	2011	yes
Valley View	38.6	168,725	45	950	950	2012	yes
Total		292,469		1,850	1,850		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that each teaching station is only used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property

Table 3
High School Capacity Inventory

High School	Site Size (acres)	Bldg Area (Sq. Ft.)	Teaching Stations (1)	Permanent Capacity (2)	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility (3)
Snohomish H.S.	28.6	270,089	74	1,800	1,800	2012	No
Glacier Peak H.S.	50.9	245,229	74	1,500	1,692	2008	Yes
AIM Alternative(4)	3.25	13,873		100	100	2008	No
Total		529,191		3,400	3,592		

(1) The number of teaching stations includes stations used for teacher planning periods. Therefore, the permanent capacity figure is adjusted to reflect that each teaching station is only used for regular student instruction for a portion of the total school day.

(2) Permanent Student Capacity figure is exclusive of Portables.

(3) Potential for expansion is based on the size of existing site and assumes that the District could obtain land use approvals/permits for such expansion. The analysis does not take into consideration the possibility of acquiring adjacent property.

(4) Note that the AIM Alternative High School is housed in the larger Parkway Facility. The Parkway Facility has both programmatic and non-programmatic uses including the Parent Partnership Program and the transition programs. The information here is specific to the AIM Alternative High School and not the entire Parkway Facility.

Portables

Portables are used as interim classroom space to house students until permanent classroom facilities can be provided and to prevent overbuilding. Portables are not a solution for housing students on a permanent basis. The District currently uses 68 portables at various sites throughout the District. The number of portables and their capacities are summarized in Table 4.

Table 4			
Portables			
School Name	Portables Classrooms	Portables Other	Capacity

Glacier Peak	8	0	192
Total	8	0	192
GRAND TOTAL	40	28	993

Each portable classroom is 896 square feet.

The District portables identified in Table 4 have adequate useful remaining life and are evaluated regularly.

Support Facilities

In addition to schools, the District owns and operates facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5
Support Facilities

Facility Name	Building Area (Sq. Ft.)	Site Size (Acres)
Operations Center^	15,073	6.3
Resource and Service Center	22,296	6.0
Parkway Campus	9,536*	3.25
District Warehouse	3,936	**
Aquatic Center	52,023	21.0

^In process of demolition and replacement by summer 2022;

new square footage will equal 15,673 (including maintenance and transportation).

**Does not include education-related square footage.*

***Located on the same site as Cathcart Elementary School.*

Land

The District currently owns two undeveloped sites. The District owns 15 acres in the Three Lakes area that could potentially be used as an elementary school site in the future (assuming that land use approvals/permits could be obtained); however that property does have some notable wetland concerns that are likely to limit potential use. The District also owns an additional 23 acres behind Valley View Middle School. The 23 acre site has topography concerns and accessibility issues that could limit the District's ability to use the property as an additional school site.

Leased Facilities

The District currently does not lease any facilities.

SECTION 4: STUDENT ENROLLMENT

Historical Trends

Student enrollment in the District remained relatively constant between 1973 and 1983 and increased steadily between 1984 and 1997. The growth in student enrollment leveled out in 1998 and dipped a little in 1999. Student enrollment then grew steadily and peaked in 2016. Enrollment in the 2020-21 and 2021-22 school years declined due to the impacts of COVID-19 pandemic on available school service models and related uncertainties. The district anticipates enrollment to rebound during the duration of this plan and return and exceed levels projected by our third-party demographer pre-COVID. See additional information below.

The October 1, 2021 FTE enrollment was 9,256. See Appendix A. Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, more assumptions about economic conditions and demographic trends in the area affect the projection. Monitoring birth rates in Snohomish County and population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event that enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projection.

Six Year Enrollment Projections

The Office of the Superintendent of Public Instruction prepares cohort survival projections based upon historical enrollment trends. The OSPI projections are limited in that they fail to account for development fluctuations and other anomalies such as the COVID-19 pandemic. The OSPI projections also utilize a headcount factor that misrepresents students in Snohomish School District facilities. See Appendix A-1.

The District utilizes a third party demographer, FLO Analytics, for forecasting future enrollments. This methodology, a modified cohort survival method, considers historic enrollment, economic trends, housing projections and birth rates, among other factors. Based upon this analysis, the District expects enrollment to grow over the six year planning period to a total FTE student population of 9,638, or an increase of 4.127%. See Appendix A-2.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts for the County. In 2020, the District's enrollment constituted approximately 15.69% of the District's total population. Assuming that, between 2022 and 2027, the District's enrollment will continue to constitute 15.69% of the District's population, using OFM/County data, the District projects a total enrollment of 10,071 students in 2027. See Table 6.

Table 6									
Comparison of Student Enrollment Projections 2021-2027									
Projection	October 2021*	2022	2023	2024	2025	2026	2027	Projected Change 2021-2027	Percent Change 2021-2027
County/OFM**	9,256	9,393	9,528	9,664	9,800	9,936	10,071	815	8.8%
District	9,256	9,287	9,388	9,469	9,508	9,587	9,638	382	4.127%
Total Population Projection for District (OFM)							64,190		
Student to Population Ratio	15.69%								

*Actual Oct 2021 FTE

**Based on 2044 GMA Population Forecasts by School District (information provided by Snohomish County).

The District uses the FLO Analytics modified cohort survival projections for purposes of predicting enrollment during the six years of this Plan. As noted above, the growth factor used in the modified cohort survival projections reflects an analysis of historic average housing development and enrollment in the District within the last six years and knowledge of active known and proposed future housing developments, as well as factors in pandemic-related anomalies. The District believes this projection to be an accurate measure of future growth given that it is based upon actual circumstances within the District. The District will monitor actual enrollment over the next two years and, if necessary, make appropriate adjustments in the next Plan update.

2044 Enrollment Projections

Student enrollment projections beyond the 2027 school year are highly speculative. Using OFM/County data as a base, the District projects a 2044 student population of 11,374. This assumes that the District's enrollment will continue to constitute 15.69% of the District's total population through 2044.

The total enrollment estimate was broken down by grade span to evaluate long-term needs for capital facilities. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 7
Projected Student Enrollment
2044

Grade Span	FTE Enrollment – October 2021	Projected Enrollment 2044**
Elementary (K-6)	4,488	5,515
Middle School (7-8)	1,423	1,748
High School (9-12)	3,345	4,111
TOTAL (K-12)	9,256	11,374

Note: Snohomish County Planning and Development Services provided the underlying data for the 2044 projections.

**The 2044 enrollment projections assume that the percentage of students per grade level will remain consistent between 2021 and 2044.

SECTION 5: CAPITAL FACILITIES NEEDS

Facility Needs (2022-2027)

Schools

The projected available student capacity was determined by subtracting projected FTE student enrollment from permanent school capacity (i.e. excluding portables) for each of the six years in the forecast period (2022-2027).

Capacity needs are expressed in terms of “unhoused students.”

The method used to define future capacity needs assumes no new construction. For this reason, planned construction projects are not included at this point. This factor is added later (if applicable, see Table 11).

Projected future capacity needs are depicted on Table 8 and are derived by applying the District’s modified cohort projected enrollment to the permanent capacity existing in 2021. This table shows actual permanent space needs and the portion of those needs that are “growth related” for the years 2022-2027. Importantly, capacity needs existing as of the 2021 base year include impacts from recent growth within the District and should also be considered as growth-related.

**Table 8
Additional Capacity Needs
2022-2027**

Grade Span	2021*	2022	2023	2024	2025	2026	2027	Pct. Growth Related
Elementary (K-6)								
Total	376**	515	626	814	900	956	960	
Growth Related		139	250	438	524	580	584	60.83%
Middle School (7-8)								
Total	---	---	---	---	---	---	---	
Growth Related	--	--	--	--	--	--	--	--%
High School								
Total	---	---	---	---	---	---	---	
Growth Related	--	--	--	--	--	--	--	--%

* Actual 2021 FTE Enrollment

**Represents capacity needs (including those related to recent growth) existing as of the date of this Plan.

The capacity improvements that are required to meet the District's growth-related and non-growth related capacity needs are identified in Table 9-B below.

By the end of the six-year forecast period (2027-2028), additional permanent classroom capacity will be needed as follows:

Table 9
Estimated Unhoused Students (2027-2028)*

Grade Span	Unhoused Students (Post-2021 Growth Related)	Unhoused Students (Pre-2021 Existing and Recent-Growth Related)
Elementary (K-6)	584	960
Middle School (7-8)	--	--
High School (9-12)	--	--
TOTAL UNHOUSED (K-12)	584	984

*Reflects needs assuming no construction projects

It is not the District's policy to include relocatable classrooms when determining future capital facility needs; therefore interim capacity provided by relocatable classrooms is not included in Table 9.

Recent and Planned Improvements

To accommodate growth in previous years, the District constructed and opened in 2007 a new elementary school and constructed a second high school, Glacier Peak, which opened in 2008. The District's voters approved a bond in May 2004 for these projects. In 2008, the District's voters approved additional construction bonds to replace and expand Machias and Riverview elementary schools to address the need for elementary student capacity. The 2008 Bond also provided for finishing the renovation of Snohomish High School, enlarging and modernizing Valley View Middle School and enlarging Centennial Middle School, and building a new aquatics center. The District also purchased an existing building, the "Parkway Building", and renovated it to house its AIM Alternative High School and Transition programs and the Parent Partnership Program.

The District convened a Citizens' Facility Advisory Committee (CFAC) in 2019 to review the conditions of our school buildings, explore demographic and enrollment projections and prioritize needs. Based on this information, the CFAC recommended, and the Board authorized for the February 2022 ballot, a \$470 million bond proposal to fund six elementary school replacement projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District. The District failed to achieve the required 60% margin for bond approval.

The District, in view of current and anticipated capacity needs, is continuing to plan for elementary capacity additions during the six-year planning period and beyond. The District may also purchase and site new portable facilities to address capacity needs.

Elementary Schools

The District opened Little Cedars Elementary School with a permanent capacity of 621, with 27 teaching stations. The elementary was completed and put into use for the 2007-08 school year. The total cost of the new elementary school was approximately \$25.0 million excluding the land purchase.

In addition, the District requested as a component of its 2008 bond proposal to replace and expand two elementary schools, Machias and Riverview. The projects are complete and the capacity of the two schools was expanded from 481 and 515 respectively to 600 each. These schools opened at the new capacity in January of 2011.

This CFP includes planning for classroom additions as a part of replacement projects at three elementary schools (Cathcart, Dutch Hill, and Seattle Hill) to address growth-related needs. The District is also considering replacement/addition projects at other elementary schools in the future (likely outside of the six year planning period). The replacement/addition projects are subject to funding secured through a future capital bond, all contingent on future action by the Board of Directors and ultimately the voters.

Middle Schools

To address overcrowding at the middle school level, the District constructed a new-in-lieu Valley View Middle School to house 950 students and modernized and enlarged Centennial Middle School to house 900 students. Centennial opened in 2011 and Valley View opened in fall 2012.

High Schools

The District opened Glacier Peak High School, with a capacity of 1,500 students in fall of 2008. In addition, the District recently completed modernization of the existing Snohomish High School campus. In the summer of 2012 three portables were added (total of six classrooms) at Glacier Peak. In 2017, an additional portable (two classrooms) was added at Glacier Peak.

Interim Classroom Facilities

The District plans to add two portables at Dutch Hill in the summer of 2022. It may purchase additional portables as needed to address growth-related needs (See Table 10). As necessary, the District will also continue to utilize portables as temporary housing of students until permanent facilities are constructed. However, it remains a District goal to house all students in permanent facilities.

SECTION 6: CAPITAL FACILITIES FINANCING

Funding of school facilities is typically secured from a number of sources including voter-approved bonds, State matching funds and development impact fees. Each of these funding sources is discussed in greater detail below.

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes. Snohomish School District voters rejected a bond proposal in 2001 for \$14.5 million to finance the acquisition of sites, planning for a new elementary school, planning for a new high school, the acquisition of modular classrooms, and the purchase and installation of technology equipment and systems.

Voters in May of 1998 approved a \$3.9 million bond issue to construct 11 classrooms at Snohomish High School and to finance mechanical and technology improvements throughout the District. On March 14, 2000, Snohomish School District voters approved a \$6.12 million dollar bond issue to finance certain capital improvements to the District's educational facilities.

In March of 2003, the school board appointed a 35-member Citizens' Facilities Advisory Committee to complete an in-depth study of our school facilities. This committee found that Snohomish schools are overcrowded and reported that half of our school buildings are at or near the end of their useful life. The committee then created a long-range plan for school construction, modernization and renovation to address those issues.

The District's voters approved a \$141,570,000 bond issue on May 18, 2004, to fund a new high school, modernization of the existing Snohomish High School, a new elementary school, acquisition of two new school sites, and various health, safety, energy and infrastructure improvements throughout the District.

The District's voters approved a \$261.6 million bond in May 2008 to fund the renovation of Snohomish High School, the renovation/expansion of Valley View Middle School, the expansion of Centennial Middle School, the replacement/expansion of Machias and Riverview elementary schools, construction of a new aquatics center, to make District-wide capital improvements, and acquire classroom technology to improve student learning.

The District's voters considered in February 2020 but did not approve a \$470 million bond proposal to fund six elementary school replacement projects (including adding capacity), added classrooms at Glacier Peak High School to reduce portable reliance, an early learning center at the existing Central Primary Center facility, and improvements at the Parkway Campus as well as the District's maintenance and transportation facilities. The bond also proposed safety and security improvements throughout the District.

State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. For eligible projects, the District's funding level under the State School Construction Assistance fund is at the 56.04% percentage level (July 2022 release).

Impact Fees

Development impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued. (See additional discussion in Section 7).

Six Year Financing Plan

The Six-Year Financing Plan shown in Table 10 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components includes bond issues, impact fees, and State School Construction Assistance funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies.

The District's six year finance plan is outlined in Table 10 below.

As previously stated, the District's CFP plans for classroom additions at three elementary schools, all subject to future funding approval. The District will update this CFP, including a potential interim update, to reflect relevant planning decisions. The District anticipates also purchasing portable facilities to address growth-related capacity needs.

Table 10
Finance Plan
(dollars in 1,000s)

	2022	2023	2024	2025	2026	2027	Total Cost*	Bond/Levy/ Impact Fee	State Match	Other	Added Capacity	Growth Related
Dutch Hill Elementary Replacement/Addition				\$46,300	\$37,000		\$83,300	X	X		X	X
Cathcart Elementary Replacement/Addition				\$45,000	\$34,700		\$79,700	X	X		X	X
Seattle Hill Elementary Replacement				\$45,100	\$34,700		\$79,700	X	X		X	X
District wide Capital Improvements (including portables)	\$300	\$300	\$300				\$900	X			X	X

*Reflects total projects costs using 2022 estimates, subject to escalation. The impact fees are calculated based on construction costs only with anticipated escalation. Construction costs for the impact fee calculation reflect average construction costs of the three elementary school capacity projects, with replacements average total capacity of 600 seats..

Table 11 - Projected Student Capacity (2022-2027)**Elementary School Surplus/Deficiency**

**Except as specifically noted, does not reflect addition or removal of portable facilities over the planning period.

SECTION 7 SCHOOL IMPACT FEES

The GMA authorizes jurisdictions to collect impact fees to supplement funding of additional public facilities needed to accommodate new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees in Snohomish County

The Snohomish County General Policy Plan (“GPP”) which implements the GMA sets certain conditions for school districts wishing to assess impact fees:

- The District must provide support data including: an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must accurately reflect projected costs in the Six-Year Financing Plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types: single family; multi-family/studio or 1-bedroom; and multi-family/2-bedroom or more.

Snohomish County established a school impact fee program in November 1997, and amended the program in December 1999. This program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees calculated in accordance with the formula, which are based on projected school facility costs necessitated by new growth and are contained in the District’s CFP, become effective following County Council adoption of the District’s CFP.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees are calculated utilizing the formula in the Snohomish County Impact Fee Ordinance. The resulting figures are based on the District’s cost per dwelling unit to, as applicable, purchase land for school sites, make site improvements, construct schools, and purchase/install relocatable facilities that add interim capacity needed to serve new development. A student factor (or student generation rate) is used to identify the average cost per dwelling unit by measuring the average number of students generated by each housing type (single-family dwellings and multi-family dwellings of one bedroom and two bedrooms or more). A description of the student factor methodology is contained in Appendix B. As required under the GMA, credits are applied in the formula to account for State School Construction Assistance funds expected to be reimbursed to the District and projected future property taxes to be paid by the dwelling unit toward a capital levy/bond that would fund the capacity improvements. The costs of projects that do not add capacity are not included in the impact fee

calculations. Furthermore, because the impact fee formula calculates a “cost per dwelling unit”, an identical fee is generated regardless of whether the total new capacity project costs are used in the calculation or whether the District only uses the percentage of the total new capacity project costs allocated to the Districts growth-related needs. Furthermore, impact fees will not be used to address existing deficiencies.

The District’s school impact fees are calculated to include the elementary capacity additions identified in this 2022 CFP update. See discussion in Sections 5 and 6 above.

Proposed Snohomish School District Impact Fee Schedule

Using the variables on the following page and formula described above, impact fees proposed for the District are summarized in Table 12. See also Appendix C.

Table 12
School Impact Fees
2022

Housing Type	Impact Fee Per Dwelling Unit
Single Family	\$6,495
Multi-Family (1 Bedroom)	\$0
Multi-Family (2+ Bedroom)	\$4,514

**Table 12 reflects a 50% adjustment to the calculated fee as required by local ordinances.*

High School (9-12)	3,345	3,395	3,443	3,492	3,542	3,591	3,640
TOTAL**	9,256	9,393	9,528	9,664	9,800	9,936	10,071

*Actual October 2021 FTE Student Enrollment.

** Totals will vary due to rounding.

^Assumes grade level percentage stays consistent through 2027.

The District finds the OFM enrollment projections as not a reliable source given the need to apply assumptions for consistent grade level percentages and the inherent flaws due to rounding.

APPENDIX B

STUDENT GENERATION FACTOR REVIEW

MEMORANDUM

To: Tom Laufmann
Executive Director, Business Services
Snohomish School District

Date: March 18, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F1371.01.004

Re: **Student Generation Report—Snohomish School District**

At the request of the Snohomish School District (District/SSD), FLO Analytics (FLO) has prepared an analysis of student generation rates (SGRs) resulting from recent (2017 to 2021) residential construction within the district. This document details the methodology FLO used to create the SGRs for SSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF housing, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2017 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was not included in the analysis. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace for SF housing with 1,172 units completed between 2017 and 2021. Over the same period, three comparatively small MF buildings were constructed. While the majority of the SF construction consisted of "Single Family Residence – Detached" (989 units), a variety of other SF use codes were also constructed, including duplexes, triplexes, condominiums, and manufactured homes (owned and leased). MF activity consisted of 17 2+ BR units.

All students (grades kindergarten [K] through 12) in the October 1, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2017–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of

Page 2

students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2017 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level residing within those units were determined. The 1,172 SF units were compared with the 9,257 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	61	0.052
1	42	0.036
2	47	0.040
3	48	0.041
4	28	0.024
5	33	0.028
6	29	0.025
7	31	0.026
8	34	0.029
9	27	0.023
10	32	0.027
11	20	0.017
12	21	0.018
K–5	259	0.221
6–8	94	0.080
9–12	100	0.085
K–12	453	0.387

*Calculated rates for grade level groups may not equal the sum of individual grade rates due to rounding.

Multifamily Developments

While SF data are nearly completely accounted for within the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Information gleaned from parcel records in conjunction with a visual remote analysis, allowed FLO to determine that MF construction (17 units) between 2017 and 2021 consisted of 2+ BR units. 161 Lincoln Ave is a mixed-use building with 8 units completed in 2021. 110 Lincoln Ave is a triplex building completed in 2017. Four students reside in these two (of three) MF buildings built between 2017 and 2021. 700 Pine Ave is a 6-unit building that does not currently house students.

Page 3

Multifamily 0–1 BR Rates

The multifamily 0–1 BR SGRs are calculated by comparing data on 0–1 BR multifamily units with the District's student record data. However, as of this writing, no 0–1 BR units were constructed from 2017 to 2021.

Multifamily 2+ BR Rates

The multifamily 2+ BR SGRs were calculated by comparing data on 2+ BR multifamily units with the District's student record data, and the number of students at each grade level living in those units was determined. It is estimated that 17 2+ BR units in total were constructed from 2017 to 2021. While the calculated multifamily 2+ BR SGRs are in line with what we would expect to see for this area, it should be noted that 17 units is not a statistically significant enough number upon which to reliably calculate a rate. These yields should be used with care.

Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 2+ BR Units

Notes:

1. The 2027 population forecasts by school district were derived using a straight-line interpolation of the 2020 and 2044 population figures. Adjustments were subsequently made as follows: growth through 2027 was frontloaded in some areas to account for known pending projects, while in others it was backloaded after 2027 to better coincide with the planned delivery of high-capacity transit service during the second half of the 20-year planning period.
2. 2000, 2010 and 2020 Census population data by school district were obtained from the Washington State Office of Financial Management (OFM).
3. For school districts which extend outside of Snohomish County's borders, the population information shown above only includes the population estimated or forecasted to reside within the Snohomish County portion of the districts.

Appendix F

Review Criteria for School District Capital Facility Plans

Required Plan Contents

1. Future Enrollment Forecasts by Grade Span, including:
 - a 6-year forecast (or more) to support the financing program;
 - a description of the forecasting methodology and justification for its consistency with OFM population forecasts used in the county's comprehensive plan.
2. Inventory of Existing Facilities, including:
 - the location and capacity of existing schools;
 - a description of educational standards and a clearly defined minimum level of service such as classroom size, school size, use of portables, etc.;
 - the location and description of all district-owned or leased sites (if any) and properties;
 - a description of support facilities, such as administrative centers, transportation and maintenance yards and facilities, etc.; and
 - information on portables, including numbers, locations, remaining useful life (as appropriate to educational standards), etc.
3. Forecast of Future Facility Needs, including:
 - identification of new schools and/or school additions needed to address existing deficiencies and to meet demands of projected growth over the next 6 years; and
 - the number of additional portable classrooms needed.
4. Forecast of Future Site Needs, including:
 - the number, size, and general location of needed new school sites.
5. Financing Program (6-year minimum Planning Horizon)
 - estimated cost of specific construction and site acquisition and development projects proposed to address growth-related needs;
 - projected schedule for completion of these projects; and

- proposed sources of funding, including impact fees (if proposed), local bond issues (both approved and proposed), and state matching funds.

6. Impact Fee Support Data (where applicable), including:

- an explanation of the calculation methodology, including description of key variables and their computation;
- definitions and sources of data for all inputs into the fee calculation, indicating that it:
 - a) is accurate and reliable and that any sample data is statistically valid;
 - b) accurately reflects projected costs in the 6-year financing program; and
- a proposed fee schedule that reflects expected student generation rates from, at minimum, the following residential unit types: single-family, multi-family/studio or 1-bedroom, and multi-family/2-bedroom or more.

Plan Performance Criteria

1. School facility plans must meet the basic requirements set down in RCW [36.70A](#) (the Growth Management Act). Districts proposing to use impact fees as a part of their financing program must also meet the requirements of RCW [82.02](#).
2. Where proposed, impact fees must utilize a calculation methodology that meets the conditions and tests of RCW [82.02](#).
3. Enrollment forecasts should utilize established methods and should produce results which are not inconsistent with the OFM population forecasts used in the county comprehensive plan. Each plan should also demonstrate that it is consistent with the 20-year forecast in the land use element of the county's comprehensive plan.
4. The financing plan should separate projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
5. Plans should use best-available information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. District-generated data may be used if it is derived through statistically reliable methodologies.
6. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources in the event that impact fees are not available due to action by the state, county or the cities within their district boundaries.
7. Repealed effective January 2, 2000.

Plan Review Procedures

1. District capital facility plan updates should be submitted to the County Planning and Development Services Department for review prior to formal adoption by the school district.
2. Each school district planning to expand its school capacity must submit to the county an updated capital facilities plan at least every 2 years. Proposed increases in impact fees must be submitted as part of an update to the capital facilities plan, and will be considered no more frequently than once a year.
3. Each school district will be responsible for conducting any required SEPA reviews on its capital facilities plan prior to its adoption, in accordance with state statutes and regulations.
4. School district capital facility plans and plan updates must be submitted no later than 180 calendar days prior to their desired effective date.
5. District plans and plan updates must include a resolution or motion from the district school board adopting the plan before it will become effective.

The Snohomish County Comprehensive Plan is current through legislation passed December 16, 2020.

Disclaimer: The Clerk of the Council's Office retains the official version of the Snohomish County Comprehensive Plan. The web version is updated as new ordinances become effective. New ordinances do not necessarily become effective in chronological or numerical order. Users should contact the Clerk of the Council's Office for information on legislation not yet reflected in the web version.

Section 1

Introduction

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington Growth Management Act (GMA) outlines thirteen broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. Public school districts serving Snohomish County residents have developed capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This Capital Facilities Plan (CFP) is intended to provide the Everett School District (District), Snohomish County, and other jurisdictions with a description of facilities needed to accommodate projected student enrollment at acceptable levels of service through the year 2044, and a detailed schedule and financing program for capital improvements over the six years, 2022-2027.

In accordance with GMA mandates, and Chapter 30.66C Snohomish County Code (SCC), this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary K-5, middle 6-8, and high 9-12).
- An inventory of existing capital facilities owned by the district, showing the locations, sizes, and student capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites, distinguishing between existing and projected deficiencies.
- The proposed capacities of expanded or new capital facilities.
- A 6-year plan for financing capital facilities within projected funding capacities, which identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the guidelines of Appendix F of the General Policy Plan were used as follows:

- Information was obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council.
- School districts may generate their own data if it is derived through statistically reliable methodologies.
- Information is to be consistent with the State Office of Financial Management (OFM) population forecasts and those of Snohomish County.

- Chapter 30.66C SCC requires that student generation rates be independently calculated by each school district. Rates were updated for this CFP.
- The CFP complies with RCW 36.70A (the Growth Management Act) and, where impact fees are to be assessed, RCW 82.02.
- The calculation methodology for impact fees meets the conditions and tests of RCW 82.02. Districts that propose the use of impact fees should identify in future plan updates alternative funding sources if impact fees are not available due to action by the state, county, or the cities within their district boundaries.

Unless otherwise noted, all enrollment and student capacity data in this CFP is expressed in Full-Time Equivalent (FTE) as of October 1 of the year indicated. For this CFP, kindergarten through grade twelve students are considered 1.0 FTE. The FTE enrollment and Headcount (HC) enrollment are equivalent.

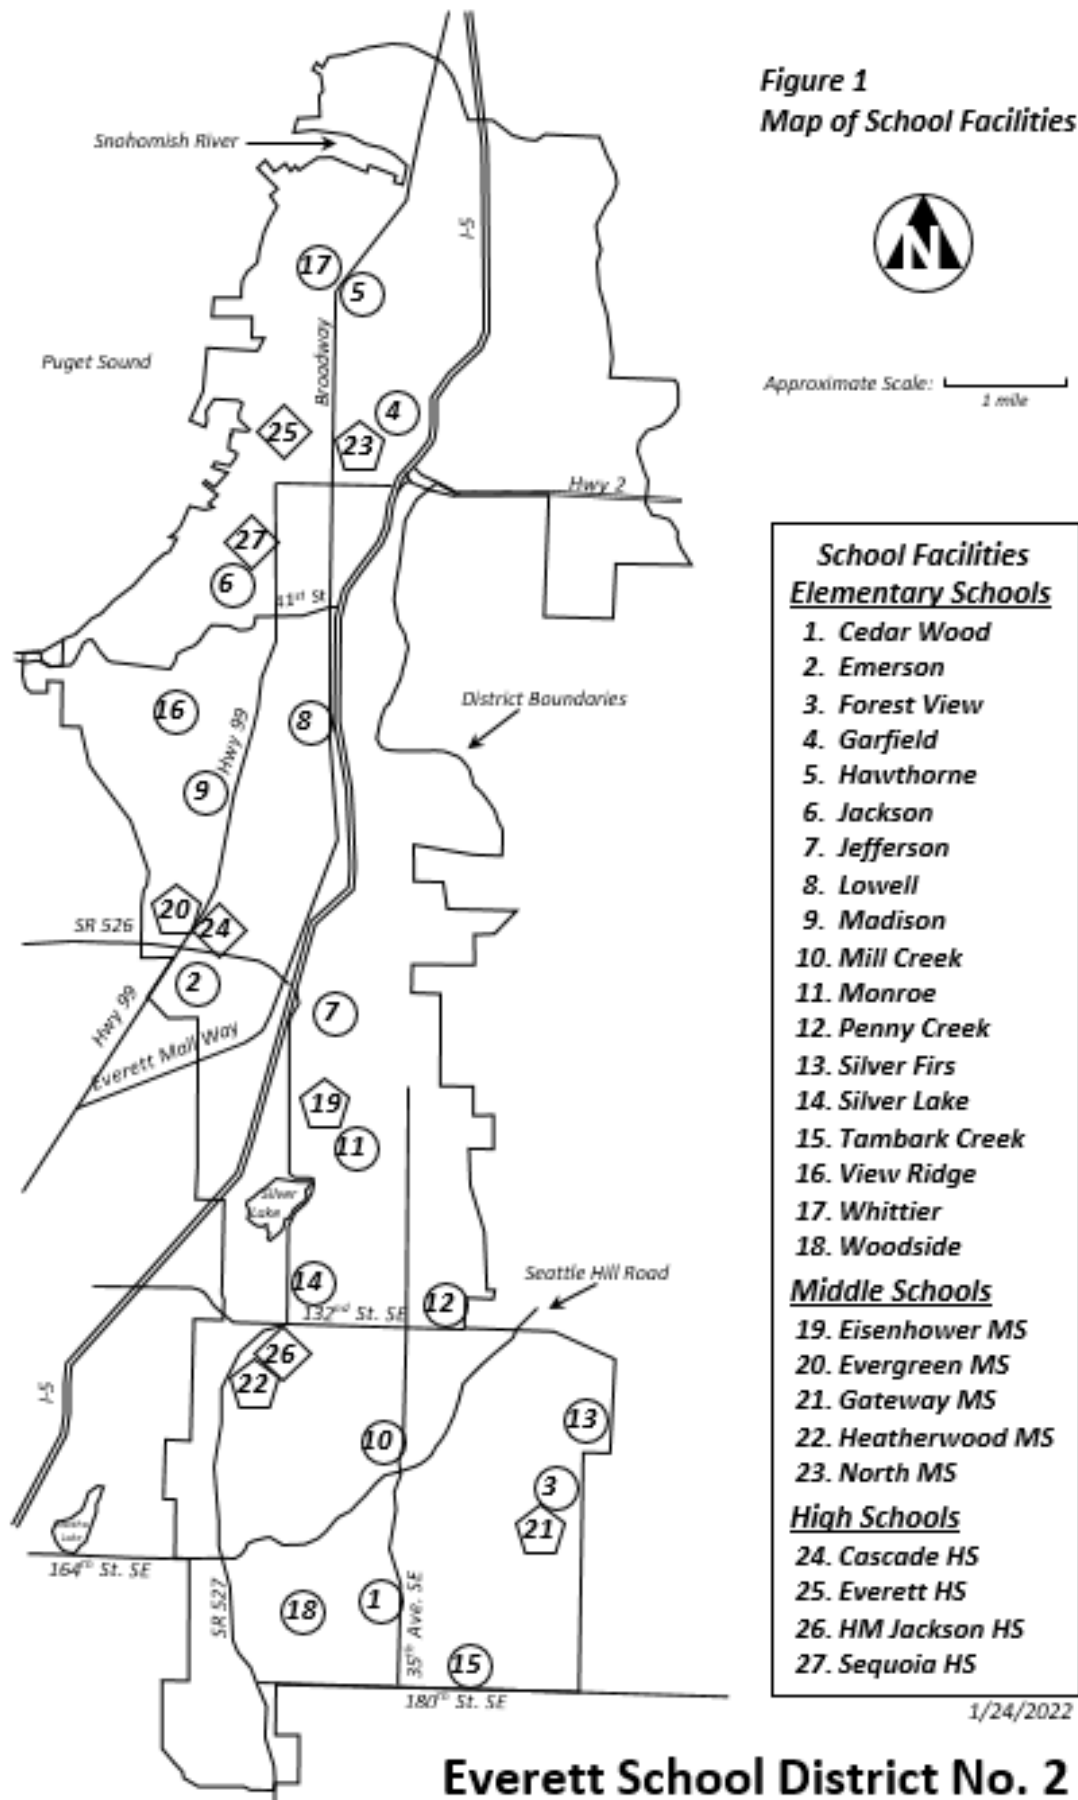

Overview of the Everett School District

The Everett School District stretches approximately fifteen miles from its northernmost boundary at the Union Slough to its southernmost boundary at 194th Street S.E. The average width is a little more than two and a half miles. The district covers an area of approximately 39 square miles. The district includes most of the City of Everett, all but a very small portion of the City of Mill Creek, and portions of unincorporated Snohomish County. The total population within the district in 2020 is estimated at 148,194 (Snohomish County GMA Population Forecast).

The district serves 19,620 students (October 2021 – OSPI Report 1049) in eighteen elementary schools, five middle schools, three comprehensive high schools, one alternative high school, one virtual academy (K-8), and 140 portable classrooms. The full and part-time district staff is approximately 2,550.

Significant Issues Related to Facility Planning in the Everett School District

The most significant school facility-related issues facing the Everett School District are 1) finding space to implement new state initiatives, such as K-3 class size reduction (17:1 student to teacher ratio), Career-Ready & College-Ready Graduation Requirements (24 credits – additional fine arts and lab science), etc.; 2) the need to construct new facilities to meet student enrollment growth; 3) the need to upgrade older facilities so they can continue to serve students in the decades ahead; 4) the availability of real property appropriately sized for anticipated future school facilities' needs.

Section 2

Educational Program Standards

SECTION 2: EDUCATIONAL PROGRAM STANDARDS

Educational Program Standards – Districtwide

School facility and student capacity needs are dictated by the types and amount of space required to accommodate the school board adopted educational programs. The educational program standards, which typically drive facility space needs, include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization, scheduling requirements, and use of relocatable classroom facilities (portables).

In addition, government initiatives and community expectations may affect how classroom space is used. The district has implemented full-day kindergarten and reduced class sizes for grades K-3, all as required by the state legislature. Traditional educational programs offered by the Everett School District are supplemented by nontraditional or specialized programs.

Examples of specialized teaching stations and programs:

- Advanced Placement
- Athletics, Health, and Fitness
- Career and Technical Education (CTE)
 - Auto Shop
 - Business and Marketing
 - Health and Human Services
 - Career Pathways
 - Business & Professional Services
 - Engineering & Advanced Manufacturing
 - Health Science & Medical Careers
 - Communication & Information Technology
 - Energy & Sustainability
 - Education Careers
 - Horticulture, Agriculture, and Floriculture
- Cares Room
- Contract Learning
- Counseling (career and mental health)
- Early Childhood Educational Assistance Program (ECEAP)
- Elementary Music (designated classroom)
- Family Resource Centers
- Health Education
- Health Services
- High school credit classes offered at middle schools
- Highly Capable Programs
- Intervention Programs
- Learning Assistance Programs
- Leadership and Activities
- Library Instruction
- Multilingual Programs (MLL)

- Online High School
- Partnerships
 - Lighthouse Cooperative
 - Parent-Teacher-Student Association (PTSA)
 - Port Gardner Parent Partnership
 - Mental Health providers
 - Natural Leaders
- Readiness to Learn Parent Centers
- Science Resource Center
- Special Education
 - Achieve (behavior support)
 - Deaf and Hard of Hearing Specialists
 - Developmental Kindergarten
 - Developmental Pre-School
 - Extended Resource Room
 - Life Skills
 - Occupational / Physical Therapy
 - 18-21 programs
 - GOAL – Gaining Ownership of Addult Life
 - STRIVE – Students Transitioning Responsibly into Vocational Experiences
 - Resource Room
 - School Psychologists
 - Speech and Hearing Therapy
 - Vision Impaired Service
- Technology Instruction & Labs - Video Production, Programing, Robotics, etc.
- Transitional Kindergarten
- Title I Programs – Math & Reading
- Virtual Academy
- Wireless Computer Carts

These specialized or nontraditional educational programs can have a significant impact on the student capacity of school facilities. Variations in student capacity between schools are often a result of the number of specialized programs offered at specific schools. These specialized programs require classroom space, which can reduce the permanent capacity of the buildings housing these programs. For example, some students leave their regular classroom for some time to receive instruction in these specialized programs. Newer schools within the district have been designed to accommodate many of these programs. However, older schools often require space modifications to accommodate specialized programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the building.

District educational program standards will undoubtedly change over time as a result of changes in the program year, specialized programs, class size, grade span configurations, use of new technology, and other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for changes to the revised educational program standards.

Educational Program Standards - Elementary Schools

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
20.5	Kindergarten
20.5	General Education - Grades 1-3
24	General Education - Grades 4-5
10	Special Education - Pre-School (Developmental)
10	Special Education - Kindergarten (Developmental)
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
- Students are provided music and technology instruction.
- At least one Special Education Resource Room is part of the curriculum.
- Design capacity for new schools:
 - 600 students
- Actual capacity of individual schools may vary depending on the educational programs offered and/or housed at a particular school.

Educational Program Standards – Middle Schools and High Schools

As a result of scheduling conflicts for student programs, the need for specialized rooms for specific programs, and the need for teachers to have a workspace during planning periods, it is not possible to achieve 100% utilization of teaching stations. Based on an analysis of the actual utilization of secondary schools, the standard utilization rate is ~85%, resulting in the following target class sizes.

Middle School

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
24	General Education - Grades 6-8
24	Special Education - Resource Room
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
18	Multilingual Learner (MLL)

High School

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
24	General Education - Grades 9-12
24	Special Education - Resource Room
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
18	Multilingual Learner (MLL)

Middle School and/or High School

- Students are also provided educational opportunities such as:
 - Art Labs
 - Auto Shop (high school only)
 - Career & Technical Education (CTE)
 - Challenge and Advanced Placement Program
 - Dual Credit Programs – College in the High School
 - Drama rooms (high school only)
 - Health and Fitness
 - Marketing (high school only)
 - Music rooms – Band, Orchestra, Strings, Jazz Band, Choir
 - Navy Junior Reserve Officer Training Corps (high school only)
 - Technology Labs
 - Science / STEM Labs
- Design capacity for new schools:
 - Middle schools = 825 students
 - High schools = 1,500 students
- Actual capacity of individual schools may vary depending on the educational programs offered and/or housed at a particular school.

Minimum Levels of Service

RCW 36.70A.020 requires that public facilities and services necessary to support new housing developments shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards. These “minimum levels of service” in the Everett School District are established as an average class size no larger than the following:

- **Class Size Goals**
 - 24 Kindergarten
 - 25 Grades 1-3 General Education
 - 26 Grade 4 General Education
 - 27 Grade 5 General Education
 - 29 Grades 6-8 General Education
 - 30 Grades 9-12 General Education
- **2021 Actual Class Size Average - based on the October 1, 2021 count of student enrollment**
 - 20.0 Kindergarten
 - 20.6 Grades 1-3 General Education
 - 24.2 Grades 4-5 General Education
 - 24.1 Grades 6-8 General Education
 - 24.5 Grades 9-12 General Education

School Boundary Changes

The Everett School District recognizes that school boundaries need to be modified occasionally to respond to changes in student enrollment and/or educational programs. **Boundary changes can be an effective method of reducing the need for new school construction** and are also necessary when new schools or classroom additions are built.

A good example of changing school boundaries to reduce the need for additional classroom space began with the 2020-21 school year. The district instituted a limited re-configuration of high school boundaries in response to significant enrollment growth in the southern end of the district. The re-configuration will be phased in over four years through 2023.

Trends in Programs, with Potential Impacts on district facilities

- Aerospace & Advanced Manufacturing Pathway
- Medical & Health Pathway
- Information & Communication Pathway
- STEM (Science, Technology, Engineering, and Mathematics), CTE (Career and Technical Education), and AP (Advanced Placement) program growth
- Flexible space for multiple uses – “maker” spaces, robotics, project-based learning, etc.
- Extended learning opportunities – after-school and/or summer activities
- Expansion of high school credit class offerings at middle schools (science, languages, etc.)
- 1:1 technology for students
- Early learning programs - Birth to 3 years and 3 to 5 years
- Industry pathway partnerships
- Post high school support opportunities
- Technology accessibility for community
- Support for strategic partners whose work is aligned with the district’s student learning mission
- Centralized storage and staging facilities for assessment, curriculum and textbooks, and STEM materials
- Expanded course offerings - Orchestra (strings), etc.
- Cost-effective solutions for serving high-need students that are currently outsourced to programs, such as the NW Regional Learning Center and Denny Youth Center

Section 3

Capital Facilities Inventory

SECTION 3: CAPITAL FACILITIES INVENTORY

Under the GMA, cities, and counties are required to inventory capital facilities used to serve existing development. The purpose of the following facilities inventory is to establish a baseline for determining what facilities will be required to address existing deficiencies and accommodate future demand (student enrollment) at acceptable or established levels of service. This section provides an inventory of capital facilities owned and operated by the Everett School District including schools, portables, developed school sites, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the district's educational program standards outlined in Section 2. A map showing the locations of district school facilities is provided in Figure 1 on page 1-3.

Schools

Everett School District's elementary schools include grades K-5, middle schools include grades 6-8, and high schools include grades 9-12.

OSPI calculates school capacity by dividing the **gross square footage of a building by a standard square footage per student**. OSPI uses the following in their calculations: 90 sq. ft. per kindergarten through grade six student, 117 sq. ft. per grade seven and grade eight student, 130 sq. ft. per grade nine through grade twelve student, and 144 sq. ft. per disabled student (WAC 392-343-035). This method is used by the state as a simple and uniform approach for determining school capacity for purposes of allocating available state funding assistance to school districts for school construction.

This method is not considered an accurate reflection of the actual capacity required to accommodate the educational programs of each school and/or the district.

For this CFP, capacity is based on the number of teaching stations within each building and the space requirements of the specific educational program as described in Section 2. The school capacity inventory is summarized in Table 1.

Portables

Portables are used as interim classroom space to house students until permanent classroom facilities can be provided, and as a way to help prevent overbuilding. Portables are not a solution for housing students on a permanent basis. The typical useful life of a portable is 30 to 40 years. The ages of the district's portables range from 4 to 55 years. The portables capacity inventory is summarized in Table 2.

For this CFP, the costs of portable relocations have not been included in the formula for determining developer impact fees.

Support Facilities

In addition to schools, the Everett School District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 3.

Undeveloped Land

The Everett School District owns the following additional sites not currently used for school purposes:

- 35th Street & Grand Avenue
 - 1.38 acres
 - Long-term lease with the City of Everett - Doyle Park
- 36th Street & Norton Avenue
 - 2.96 acres
 - Long-term ground lease with Housing Hope
- Cadet Way Property
 - 9.25 acres
 - Located north of Jefferson ES
- Seattle Hill Road & State Route 527
 - 18.94 acres
 - Future school site
- 180th Street SE
 - 24.81 acres
 - Future site of comprehensive high school #4
- Strumme Road
 - 10.55 acres
 - Future site of elementary school #19

Table 1

1. Building area does not include unheated garage space (18,409 sq. ft.)

Section 4

Student Enrollment

SECTION 4: STUDENT ENROLLMENT

Historical and Current Enrollment Trends

From the early 1970s through the early 1980s, student enrollment in the district was relatively constant. Beginning in 1983 student enrollment showed a steady increase through 2001. Fueled by historically low-interest rates and an active housing market in the Mill Creek East UGA Plan area, district enrollment rose again through 2009. Shortly thereafter district's enrollment felt the effect of the economic recession. The district's enrollment declined through 2012. Between 2012 and 2019 the district's enrollment has increased each year. Due to COVID-19 related issues, district enrollment decreased in 2020, with a slight increase in 2021. Districtwide enrollment is projected to increase through 2031. Enrollment projections from 2032 to 2044 are linked directly to OFM population forecasts and show a steady increase as well.

2022-2027 Enrollment Projections

This CFP has been prepared using enrollment projections, for 2022 through 2027, as provided by W. Les Kendrick of Educational Data Solutions (Kendrick). This enrollment projection method was chosen because it uses a grade progression method (cohort survival analysis) that tracks the progress of students as they progress from grade to grade. This method tracks enrollment each year at each grade span as students move through the K-12 system, and projects enrollment based on actual enrollment changes over the previous five years. After completing the initial forecast, the numbers were adjusted using new home construction data, county population forecasts, and forecasts of the future K-12 population in the county. The Kendrick methodology is described in more detail in Appendix E. The Kendrick enrollment projections (medium) are presented in Tables 4, 5, and 6. All enrollment figures shown in this CFP are FTE as of October 1 of the year indicated.

For comparison purposes, Table 5 also contains enrollment forecasts from two other sources. A historical cohort-survival projection was prepared by OSPI (detailed projections in Appendix C) and an OFM Ratio projection was prepared by Shockey Planning Group. The OFM Ratio method (described in more detail in Appendix D) is based on a percentage of the district's population as predicted by OFM and Snohomish County.

Based on the Kendrick enrollment projections (medium-range), overall district enrollment will increase by **628 students over the next six years**, reflecting an increase of approximately **3.20%** over the 2021 enrollment levels. Table 6 provides a breakdown of the Kendrick enrollment projections by grade level span for every year from 2022 to 2027.

2044 Enrollment Projections

Long-range enrollment projections are much more speculative than short-range projections. They are still useful in developing comprehensive plans for future facilities and sites. Kendrick produces projections through 2031 and OSPI produces projections through 2027. Therefore, enrollment projections for 2044 are presented in Table 7 using just the OFM Ratio Method.

The OFM projections for 2044 indicate that total enrollment in the district will increase by 3,958 students to 23,578, an increase of **20.17% over the 2021 enrollment levels**. Enrollment in 2044 is projected to be higher at all levels. An analysis of future capacities and facility needs is provided in Section 5.

Section 5

Capital Facilities Plan

SECTION 5: CAPITAL FACILITIES PLAN

Facilities Needs 2022-27

Elementary School

There are currently existing permanent capacity deficiencies at the elementary school level. As of 2021, the district elementary enrollment was 917 students over the permanent building capacity. These students are housed in ninety-three (93) portable classrooms. Twelve of the district's eighteen elementary schools are currently over their permanent building capacity. By 2027, the district is projected to grow by an additional 310 elementary students. In 2023, the district is projected to have the highest elementary enrollment at 9,867, a growth of 430 students. The plan to address these needs is through the construction of additional classroom space, and the purchase and/or relocation of portables. The plan, as detailed in the CFP, is to construct 10 additional classrooms with a capacity of 220.

Middle School

There are existing permanent capacity deficiencies at the middle school level. As of 2021, the district middle school enrollment was six (6) students over the permanent building capacity. These students are housed in thirty (30) portable classrooms. Only one of the district's five middle schools is over the permanent building capacity. Middle school enrollment is projected to continue to grow through 2027, with a growth of 192 students. The plan is to address the needs at individual schools through the purchase and placement and/or relocation of portables. The plan, as detailed in the CFP, does not include the construction of any new classroom space.

High School

District-wide, the high schools do not have existing permanent capacity deficiencies. Nonetheless, one of the district's three high schools is currently 228 students over the permanent building capacity. By 2027, the high school enrollment is projected to grow by an additional 126 students. At that time, two of the district's three high schools are projected to be over permanent building capacity. The district is projected to have the highest high school enrollment in 2023 with 5,710 students, a growth of 167 students. The plan to address part of these needs is through a phased-in modified attendance boundary adjustment (2020-2023) and the purchase and placement and/or relocation of portables at the affected schools. The plan, as detailed in the CFP, does not include the construction of any new classroom space.

District-wide

Enrollment

The district-wide enrollment is projected to gradually increase each year from 2021 to 2025, and then level off through 2027. During this same period, the anticipated enrollment levels will continue to exceed the 2021 capacities at the elementary and middle school levels. The increase in enrollment can be seen in all areas of the district. Enrollment and capacity projections are presented together for comparison purposes in Table 8 – *Permanent Facility Capacity Calculations 2021-2027 & 2044*.

Land

Most of the recent housing development and, as a result, the increase in our student enrollment has been and is anticipated to continue to be, in the southern part of the district. Most of the developable land in that part of the district within the urban growth area has already been developed. This trend could increase the need for school facilities in this area beyond those described below.

State law, Vision 2050, and the Snohomish County Code each address school facilities planning. To help plan for anticipated growth in student enrollment, especially in the southern part of the district, the district has been searching for developable assemblages of property large enough to site another elementary school. However, the availability of undeveloped land within this part of Snohomish County's Urban Growth Area (UGA) is extremely limited.

It would be more efficient from a student accessibility and transportation perspective to look at sites closer to the anticipated growth and outside the UGA rather than further away and within the UGA. It would be burdensome and inequitable to displace residents and diminish housing stock with school facilities where other alternatives exist that require less family displacement, less housing stock demolition, and are more proximate to the students than potential school sites further north.

The district anticipates the need to continue to look outside of the UGA to locate parcels large enough to accommodate a school, where appropriate. The district is allowed to locate elementary schools outside the UGA. Under Snohomish County's zoning code, elementary schools are allowed in rural areas, although RCW 36.70A.213 imposes certain conditions on the extension of public facilities and utilities to serve schools sited in rural areas. RCW 36.70A.213(1)(b) & (c)

Busing

Due to the impacts, difficulties, and high cost of transporting students over long distances, the district believes busing students long distances from the south end of the district to the north end is not the most appropriate method of addressing all the expected south-end growth.

Planned Improvements Adding Student Capacity

The following is an outline of the projects that add capacity and are considered necessary to accommodate the students forecasted in the Kendrick enrollment projections for the district through 2027. Timelines for these projects can be found in Table 9 – *Capital Facilities Plan*.

Elementary Schools

District-wide elementary school enrollment is projected to reach 9,747 in 2027 as shown in Table 8, an increase of 310 students from the 2021 enrollment of 9,437. This is 1,227 more students than the existing 2021 elementary school capacity of 8,520. In response to this increase in enrollment, the district is planning:

- 1) Additional classroom space as part of two new in lieu of modernization projects – 14 classrooms with a projected capacity of 308 will be constructed. The location of these additional classrooms (estimated costs between 2022-2027): Jackson ES – 10 classrooms (\$10,852,000); Madison ES – 4 classrooms (\$2,692,000)*. (*anticipated project completion - Fall 2028)
Total estimate - \$13,544,000
- 2) Portable classrooms (7) will need to be relocated or purchased to provide enough classroom space at individual schools.

Total estimate - \$1,825,000

The estimated cost of elementary school permanent facility improvements is: \$13,544,000

Middle Schools

District-wide middle school enrollment is projected to increase to its highest level of 4,832 in 2027. The existing 2021 middle school capacity of 4,634 will not be adequate to accommodate the projected enrollment. To provide for the enrollment increases at individual schools, portable classrooms (8) will need to be purchased or relocated to provide sufficient classroom space while avoiding additional permanent facility construction expenses. No other projects adding capacity are planned through 2027. Total estimate - \$1,825,000

The estimated cost of middle school permanent facility improvements is: \$0.

High Schools

District-wide high school enrollment is projected to increase to its highest level of 5,710 in 2023. At that point, only one of the district's three high schools is projected to be over their permanent building capacity. The plan to address the needs, between 2022 and 2027, is through the continuation of a modified attendance boundary adjustment and the purchase or relocation of portables at the affected schools. As enrollment increases at individual schools, portable classrooms (6) will need to be purchased or relocated to provide enough classroom space. Total estimate - \$1,050,000

The estimated cost of high school permanent facility improvements is: \$0

Future School Site Properties

180th Street SE

In 2007 the district purchased property on 180th St. SE as a future site for two schools. The construction of the first school, Tambark Creek ES, was completed in 2020. The remainder of the site remains undeveloped and is the planned location of a future high school. As part of the purchase and sale agreement the district issued, to the developer, the equivalent of \$4,660,000 worth of Mitigation Fee Credits toward future impact/mitigation fees. The developer can use the certificates in lieu of paying impact/mitigation fees. This practice will continue until the retirement of the current credit balance of \$79,750.

Seattle Hill Road & SR 527

In 1997 & 1998 the district purchased an assemblage of properties for a future school site at the southeast corner of Seattle Hill Rd and Bothell-Everett Highway. Over the years the district demolished and removed all structures from the site. There is an established wetland on the property. The site remains undeveloped and is the planned location of a future middle school.

Property Purchases

To accommodate future growth and the facilities needs of the district, the district plans to continue to acquire approximately 11 acres of additional property in the southeastern portion of the district in the vicinity of Strumme Road for a future elementary school. The district currently owns 2 properties in this area. In accordance with applicable state, regional, and county planning policies, the district finds that this property is an appropriate location for a future elementary school, given the anticipated student enrollment area and growth, and the limited availability of suitable land in south Snohomish County to equitably meet the anticipated student demand.

The cost to purchase these properties is estimated at: \$5,000,000

Planned Improvements Not Adding Student Capacity

The following is an outline of the projects that do not add capacity but are considered necessary to accommodate and support the educational program in the district through 2027. Timelines for these projects can be found in Table 9 – *Capital Facilities Plan*.

Elementary Schools

- Jackson Elementary School - new in lieu of modernization
- Madison Elementary School - new in lieu of modernization

The cost of these improvements is estimated at: \$73,808,000

Middle Schools

- Nothing planned

The cost to complete this improvement is estimated at: \$0

High Schools

- Cascade High School - Science Building - new in lieu of modernization
- Cascade High School - Cafeteria and kitchen upgrades
- Cascade High School - Bleacher replacement
- Everett High School - Cafeteria & classroom modernization
- HM Jackson High School - STEM classroom upgrades
- HM Jackson High School - Bleacher replacement

The cost of these improvements is estimated at: \$32,797,000

Safety and Security Projects & ADA Upgrades

- Upgrades to building access and controls, fire alarms, site security, and ADA upgrades

The cost of these improvements is estimated at: \$7,458,000

Clean Buildings Act

- Upgrades to building to meet the requirements of the Clean Building Act – HVAC, roofing, and flooring systems

The cost of these improvements is estimated at: \$48,490,000

Technology Projectors and infrastructure (included in 2016 Bond & Levy)

- Classroom devices, related infrastructure, support, training, professional development

The cost of these improvements is estimated at: \$17,432,000

Technology Infrastructure & Upgrades

- WIFI-mobile devices, multi-media classroom display systems, security cameras, network/data security, cybersecurity systems, data center systems, WIFI
- Upgrade electrical systems district-wide - Including data server rooms emergency backup generators and fiber optic network systems
- Student Information System - including software and staff development

The cost of these improvements is estimated at: \$73,381,000

Other School Projects

- District-wide upgrades to heating, ventilation, and air conditioning systems, exterior and interior finishes, roofing, electrical, site work, freezer & cooler replacement (3 schools), and other miscellaneous systems upgrades

The cost of these improvements is estimated at: \$9,089,000

Other Projects

- Replace playground equipment – 8 schools
- Replace Readerboards – 19 schools
- Memorial Stadium - replace synthetic turf and track; Baseball stadium upgrades
- South satellite bus facility

The cost of these improvements is estimated at: \$16,621,000

Facilities Needs 2027-2044

Planned Improvements

To house the district-wide projected enrollment (OFM) from 2027 through 2044, the district would need to construct new schools and/or classroom additions at various school sites throughout the district. To prepare for this projected growth, the district will need to acquire additional sites for new schools.

To accommodate the enrollment growth from 2027 to 2044 the district anticipates the need for the following facilities:

- Elementary school level
 - 119 Classrooms / 2,610 capacity
 - Equivalent to four (4) new schools and additions to existing schools
- Middle school level
 - 41 Classrooms / 993 capacity
 - Equivalent to one (1) new school and additions to existing schools
- High school level
 - 21 Classrooms / 507 capacity

Source: Everett School District

Updated: 3/29/2022

1. Secured Bond/Levy - bond and levy funding already approved by voters

2. Secured Other - funds currently available to the District including proceeds from property sales, school mitigation and impact fees, state funding assistance from prior construction projects, and impact/mitigation fee credits from the 2007 purchase of the 30-acre property on 180th Street SE

3. Unsecured future - school mitigation and impact fees not yet collected, bonds and levies not yet approved, grants, donations, and other miscellaneous sources

4. Costs are not included in the calculations of the impact fees

CAPITAL FACILITIES FINANCING PLAN

Six-Year Finance Plan

The *Capital Facilities Plan* (Table 9) demonstrates how the Everett School District intends to fund new construction and improvements to school facilities for the years 2022 through 2027. The financing components include 1) secured funding from capital projects bonds and levies; 2) secured funding from other sources - property sales, school mitigation, and impact fees, state funding assistance from prior construction projects, and mitigation fee credits from the 2007 purchase of the 30-acre property on 180th St SE; and 3) unsecured future funding sources - school mitigation and impact fees not yet collected, bonds and levies not yet approved and grants. The financing plan also separates projects and portions of projects which add permanent building capacity from those which do not.

Funding for the Plan

General Obligation Bonds

Bonds are typically used to fund the construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond. Bonds are sold and then retired through the collection of property taxes. The Everett School District passed capital improvements bonds for \$96.5 million in 1990, \$68.5 million in 1996, \$74.0 million in 2002, \$198.9 million in 2006, and \$149.7 million in 2016. Historically, most major projects have been financed by these bonds.

Capital Levies

In February 2022, the voters of the district approved a \$325.5 million replacement Capital Levy. In April 2016, the voters of the district approved an \$89.6 million replacement Capital Levy for Safety, Building, and Instructional Technology Improvements. In 2010, voters approved a Building Repair and Technology levy authorizing the district to collect \$48 million from property taxes over six years for capital improvements to facilities and technology.

School Construction Assistance Program (SCAP)

State funding assistance comes from the Common School Construction Fund (28A.515 RCW). Bonds are sold on behalf of the fund and then retired from revenues accruing predominantly from the sale of renewable resources (i.e. - timber) from state school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the State Board of Education can establish a moratorium on certain projects.

School districts may qualify for state funding assistance for a specific capital project. To qualify, a project must first meet a state-established criterion of need. This is determined through a formula that specifies the amount of square footage the state will help finance to house the enrollment projected for the district. If a project qualifies, it can become part of a state prioritization system. This system prioritizes the allocation of available funding resources to school districts statewide based on seven prioritization categories. Funds are then disbursed to the districts based on a formula that calculates district assessed valuation per pupil relative to the whole state assessed valuation per pupil to establish the percent of the total project cost to be paid by the state for eligible projects. The 2022 state funding assistance percentages, for recognized project costs, range from a minimum of 19.47% to a maximum of 95.46%. The district's current state funding assistance percentage is: 55.05%.

State funding assistance can only be applied for and received for major school construction projects. Site acquisition and minor improvements are not eligible to receive funding assistance from the state. Because the availability of state funding assistance has not kept pace with the rapid enrollment growth occurring in many of Washington's school districts, sometimes funding assistance from the state is not received by a school district until after a school has been constructed. In such cases, the district must "front fund" a project. That is, the district must finance the complete project with local funds. Sometimes borrowing funds that are allocated to future projects, until the state distributes their funding assistance. When the state funding assistance is received, the future projects' accounts are reimbursed.

Currently, the state has determined that the Everett School District has excess student capacity, and, therefore, is not currently eligible for state funding assistance on projects that provide increased student capacity. The district remains eligible for state funding assistance for modernization and new in lieu of modernization projects.

Construction Cost Allocation (CCA): This number is generated by OSPI as a guide for determining the area cost allocation for new school construction. The CCA is adjusted regularly for inflation. As of July 1, 2022, the CCA has been adjusted to \$246.83 per square foot.

School Impact Fees

Impact fees, assessed on new housing developments, have been adopted by several jurisdictions as a means of supplementing traditional funding sources for the construction of public facilities needed to accommodate the population growth attributed to the new development. School impact fees are generally collected by the permitting agency at the time of issuance of building permits or, in a limited number of instances, the issuance of certificates of occupancy. The district's impact fees are calculated on worksheets contained in Appendix A and are summarized in Table 11.

Impact fees have been calculated utilizing the formula in Chapter 30.66C SCC. The resulting figures are based on the district's cost per dwelling unit: to purchase land for school sites, make site improvements, construct schools, and purchase, install or relocate portables. Credits have also been applied in the formula to account for state funding assistance to be reimbursed to the district and projected future property taxes to be paid by the owner of a dwelling unit. The costs of projects that do not add capacity or which only address existing deficiencies have been eliminated from the variables used in the calculations as indicated in Table 12 – *Impact Fee Variables*.

Calculation Criteria / Impact Fee Variables (See Table 12 – *Impact Fee Variables*)

Student Factor: The student factor or Student Generation Rate (SGR) is the average number of students generated by each housing type, whether single-family detached dwellings or multiple-family dwellings. Multiple-family dwellings in a single structure, are broken out into zero-to-one bedroom units and two or more bedroom units.

Pursuant to a requirement of Chapter 30.66C SCC, each school district is required to conduct a student generation study within their jurisdiction. This is done to "localize" generation rates for purposes of calculating impact fees. A description of this methodology is contained in Appendix B.

The current student generation rates for the district are:

Table 10
Student Generation Rates

Housing Type	K-5	6-8	9-12	K-12
Single Family	0.301	0.088	0.069	0.458
Multiple Family, 0-1 BR	0.011	.000	.000	0.011

Student Generation Rate Study

MEMORANDUM

To: Charles Booth
Facilities & Planning Specialist
Everett School District

Date: March 31, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F2253.01.001

Re: Student Generation Report— Everett School District

At the request of the Everett Public Schools (District/EPS), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent single-family (2014–2021) and multifamily (2017–2021) construction within the district. This document details the methodology FLO used to create the SGRs for EPS; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2014 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) March 2022 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of two residential construction developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of two mobile home sites that have been present since at least 2010. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 2,757 SF units and 27 MF buildings completed between 2014 and 2021 (SF) and the period between 2017 and 2021 (MF). While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (2,440 units), a variety of units with other SF use codes were also constructed, including duplexes, condominiums, and manufactured homes (owned and leased). MF development ranged from three and four family residences to 301+ unit construction. About 66 percent (1,105 units) of these new MF units were 2+ BR units, while the remainder (577 units) were 0–1 units.

All students (grades kindergarten [K] through 12) in the March 1, 2022, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2014–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2014 and 2021) from the SCAO were compared with the District's March 2021 SIS, and the number of students at each grade level living in those units was determined. The 2,757 SF units were compared to the 20,608 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	159	0.058
1	147	0.053
2	138	0.050

6–8	243	0.088
9–12	190	0.069
K–12	1,262	0.458

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

FLO reached out to the building management at the seven projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Farm By Vintage, Gateway, Silver Creek Apartment Homes, and Riverview Apartments. Despite numerous attempts, no bedroom information could be received from Kinect at Broadway, The Landing at Port Gardner, and HopeWorks Station II for the 28 students living at units within these buildings. Based on trends within and surrounding the district, we assumed 90 percent of the students would reside within a 2+ BR unit with the remaining 10 percent residing within a 0–1 BR unit.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's March 2022 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 577 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

Grade	Matches	Rate

K–5	6	0.011
6–8	0	0.000
9–12	0	0.000
K–12	6	0.011

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's March 2022 SIS and determining the number of students at each grade level living in those units. It is estimated that 1,105 2+ BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Table 3. Rate of Matches by Grade for Multifamily 2+ BR Units

Appendix D

OFM Ratio Enrollment Projection Methodology

Enrollment Forecasts OFM Ratio Method

The Growth Management Act requires that capital facility plans for schools consider *enrollment* forecasts that are related to official *population* forecasts for the district. Snohomish County prepares the population estimates by **distributing official estimates from the Washington Office of Financial Management (OFM)** to the school district level. In February 2022 the County adopted updated official school district population projections through 2044 (the horizon year for its GMA planning).

Table D-1			
Historical Student/Population Ratio			
Year	Population*	FTE Student Enrollment	Ratio
2006	122,733	18,538	15.10%
2007	124,578	18,573	14.91%
2008	126,150	18,743	14.86%
2009	127,730	18,828	14.74%
2010	129,842	18,660	14.37%
2011	130,441	18,613	14.27%
2012	131,111	18,590	14.18%
2013	132,833	18,272	13.76%
2014	135,654	19,159	14.15%
2015	138,715	19,453	14.02%
2016	142,060	19,700	13.87%
2017	145,052	19,854	13.69%
2018	147,361	20,051	13.61%
2019	150,119	20,143	13.42%
2020	148,194	19,525	13.18%
2021	150,347	19,620	13.05%

Population: 2010 and 2020: Federal Census.

Other: Official County Estimate Enrollment: OSPI

The official Census population count for Snohomish County in 2020 was 827,957. The official population projection for all of Snohomish County is 1,136,310 in 2044. For the Everett School District, the County's official Census total in 2020 is 148,194, increasing to an estimated 214,341 in 2044.

The OFM ratio method computes past enrollment as a percentage of the past population and then projects how those percentage trends will continue into the future. Table D-1 shows population estimates developed by Snohomish County over the past 15 years. **Enrollments as reported by the Office of the Superintendent of Public Instruction (OSPI) are shown along with the computed ratio of the two figures.**

Ratio estimates have shown a continual decline since 2006, reflecting a decline in the number of students per household as the population grows. A more significant decline in the ratio occurred in 2020 and 2021, likely due to the effects of the COVID-19 pandemic with its remote teaching, homeschooling, student transfers, and other anomalies. For this reason, future ratios and enrollment estimates (Table D-2) did not rely solely on the 2020 and 2021 numbers.

For its planning purposes, the district has accepted the County's estimated population for 2044 (214,341). The 2022-2044 population estimates were prorated using that figure, an average of 2811 new residents per year. The district assumes that the student population ratio will decline to 11.00% in 2044. The resulting enrollment forecasts are presented in Table D-2.

Readers are reminded that long-range enrollment forecasts are general estimates only. They will be reviewed and revised every two years as part of the updates required by the County Code (SCC 30.66C).

Table D-2								
Future Enrollments - Ratio Method								
Actual		Estimated						
2020	2021	2022	2023	2024	2025	2026	2027	2044
Population								
148,194	150,347	152,500	155,311	158,122	160,933	163,744	166,555	214,341

Appendix E

Kendrick Enrollment Projection Methodology

Kendrick Enrollment Projection Methodology

W. Les Kendrick, Ph.D., Educational Data Solutions, LLC

Enrollment for the Everett School District was projected using grade progression methods (cohort survival ratios) that track the progress of students as they progress from grade to grade. This method compares the enrollment in a given year at a specific grade (e.g., 2nd grade) to the enrollment at the previous grade from the previous year (1st grade). The ratio of these two numbers provides an indication of whether enrollment typically stays the same, grows, or declines as students progress from one grade to the next. The progression ratios at each grade level were averaged over several years and then applied to the current year's grade level enrollment (e.g., 2nd grade) to predict next year's enrollment at the subsequent grade (e.g., 3rd grade). This was done for every grade except kindergarten. The numbers were then adjusted and modified based on additional information about housing and population growth within the District (more on this below).

Kindergarten enrollment was projected by comparing the kindergarten enrollment in a given year to county births 5 years prior to that year (birth-to-k ratio). The average of this number for the last several years was then used to predict next year's enrollment. The average was also applied to future known birth cohorts to project subsequent years. For years in which birth data was not available, births were projected based on forecasts of the county population available from State and local jurisdictions, State birth forecasts, the correlation between State and County birth rates, and an assessment of the most recently available fertility rates for the county.

After completing the initial forecast, the numbers were adjusted using new home construction data, county population forecasts, and forecasts of the future K-12 population in the county. New Home construction data was obtained from New Home Trends, including information about currently permitted units as well as information about future planned development within the Everett School District. Population forecasts for the county were obtained from State and county planning offices. And a forecast of the population for the Everett School District was created based on forecasts of growth for neighborhoods in and around the District and recent population estimates for the District. All of this information was considered and used to adjust the final forecast numbers so that they would more closely reflect expected changes in housing and population growth within the District's boundary area in the coming years.

Kendrick Enrollment Projections – Medium Range 2022-27

Enrollment Projections by Grade

Grade Level	Actual 2021	Projections					
		2022	2023	2024	2025	2026	2027

Levels of Service Report

2021-22**Levels of Service Report***(October 2021 Enrollment)***Minimum Levels of service**

Washington state law (RCW 36.70A.020) requires that public facilities and services necessary to support new housing developments shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards (minimum levels of services).

The Everett School District sets the minimum levels of service as the district-wide average class size and no larger than the class size goals. The class size goals are listed on page 2-4. The average class sizes for the 2021-22 school year are shown below.

Average Class Size	
	Elementary
Kindergarten	20.0
Grades 1 - 3	20.6
Grades 4 - 5	24.2
	Middle School
Grades 6 - 8	24.1
	High School
Grades 9 - 12	24.5

Section 1

Introduction

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington Growth Management Act (GMA) outlines thirteen broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. Public school districts serving Snohomish County residents have developed capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This Capital Facilities Plan (CFP) is intended to provide the Everett School District (District), Snohomish County, and other jurisdictions with a description of facilities needed to accommodate projected student enrollment at acceptable levels of service through the year 2044, and a detailed schedule and financing program for capital improvements over the six years, 2022-2027.

In accordance with GMA mandates, and Chapter 30.66C Snohomish County Code (SCC), this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary K-5, middle 6-8, and high 9-12).
- An inventory of existing capital facilities owned by the district, showing the locations, sizes, and student capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites, distinguishing between existing and projected deficiencies.
- The proposed capacities of expanded or new capital facilities.
- A 6-year plan for financing capital facilities within projected funding capacities, which identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the guidelines of Appendix F of the General Policy Plan were used as follows:

- Information was obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council.
- School districts may generate their own data if it is derived through statistically reliable methodologies.
- Information is to be consistent with the State Office of Financial Management (OFM) population forecasts and those of Snohomish County.

- Chapter 30.66C SCC requires that student generation rates be independently calculated by each school district. Rates were updated for this CFP.
- The CFP complies with RCW 36.70A (the Growth Management Act) and, where impact fees are to be assessed, RCW 82.02.
- The calculation methodology for impact fees meets the conditions and tests of RCW 82.02. Districts that propose the use of impact fees should identify in future plan updates alternative funding sources if impact fees are not available due to action by the state, county, or the cities within their district boundaries.

Unless otherwise noted, all enrollment and student capacity data in this CFP is expressed in Full-Time Equivalent (FTE) as of October 1 of the year indicated. For this CFP, kindergarten through grade twelve students are considered 1.0 FTE. The FTE enrollment and Headcount (HC) enrollment are equivalent.

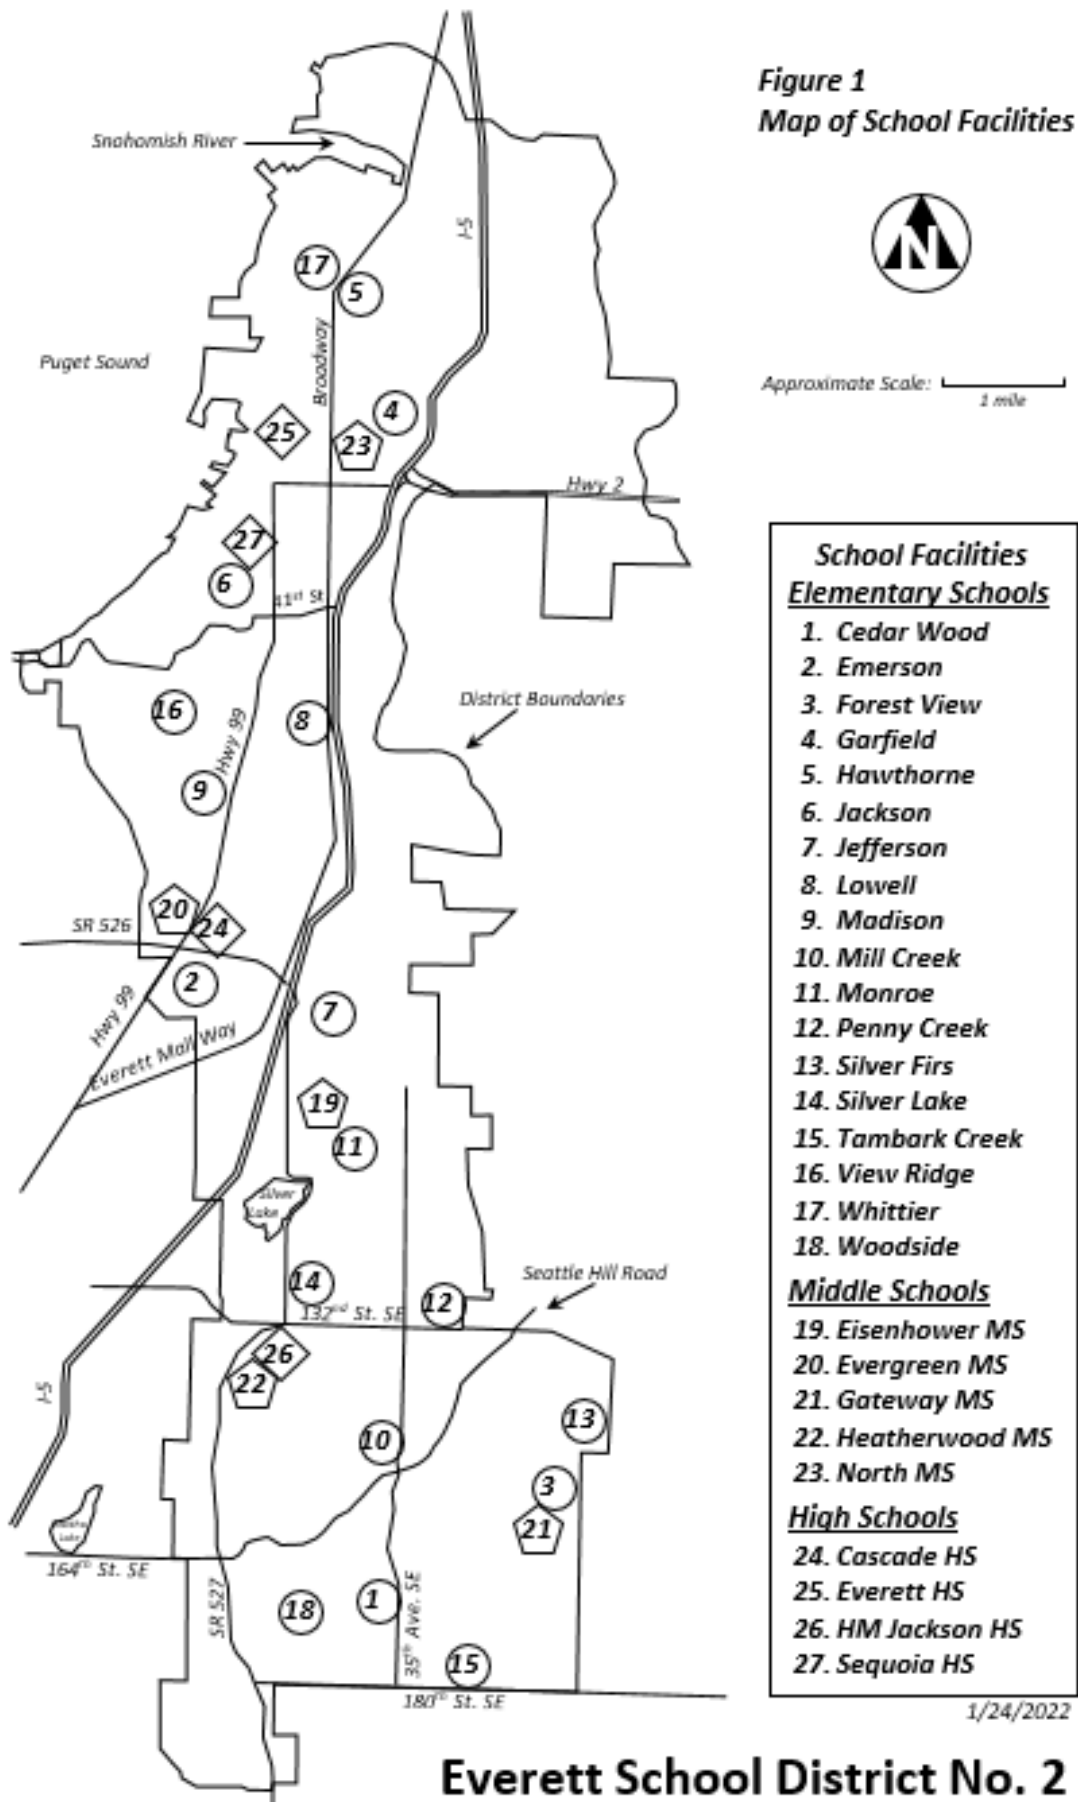

Overview of the Everett School District

The Everett School District stretches approximately fifteen miles from its northernmost boundary at the Union Slough to its southernmost boundary at 194th Street S.E. The average width is a little more than two and a half miles. The district covers an area of approximately 39 square miles. The district includes most of the City of Everett, all but a very small portion of the City of Mill Creek, and portions of unincorporated Snohomish County. The total population within the district in 2020 is estimated at 148,194 (Snohomish County GMA Population Forecast).

The district serves 19,620 students (October 2021 – OSPI Report 1049) in eighteen elementary schools, five middle schools, three comprehensive high schools, one alternative high school, one virtual academy (K-8), and 140 portable classrooms. The full and part-time district staff is approximately 2,550.

Significant Issues Related to Facility Planning in the Everett School District

The most significant school facility-related issues facing the Everett School District are 1) finding space to implement new state initiatives, such as K-3 class size reduction (17:1 student to teacher ratio), Career-Ready & College-Ready Graduation Requirements (24 credits – additional fine arts and lab science), etc.; 2) the need to construct new facilities to meet student enrollment growth; 3) the need to upgrade older facilities so they can continue to serve students in the decades ahead; 4) the availability of real property appropriately sized for anticipated future school facilities' needs.

Section 2

Educational Program Standards

SECTION 2: EDUCATIONAL PROGRAM STANDARDS

Educational Program Standards – Districtwide

School facility and student capacity needs are dictated by the types and amount of space required to accommodate the school board adopted educational programs. The educational program standards, which typically drive facility space needs, include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization, scheduling requirements, and use of relocatable classroom facilities (portables).

In addition, government initiatives and community expectations may affect how classroom space is used. The district has implemented full-day kindergarten and reduced class sizes for grades K-3, all as required by the state legislature. Traditional educational programs offered by the Everett School District are supplemented by nontraditional or specialized programs.

Examples of specialized teaching stations and programs:

- Advanced Placement
- Athletics, Health, and Fitness
- Career and Technical Education (CTE)
 - Auto Shop
 - Business and Marketing
 - Health and Human Services
 - Career Pathways
 - Business & Professional Services
 - Engineering & Advanced Manufacturing
 - Health Science & Medical Careers
 - Communication & Information Technology
 - Energy & Sustainability
 - Education Careers
 - Horticulture, Agriculture, and Floriculture
- Cares Room
- Contract Learning
- Counseling (career and mental health)
- Early Childhood Educational Assistance Program (ECEAP)
- Elementary Music (designated classroom)
- Family Resource Centers
- Health Education
- Health Services
- High school credit classes offered at middle schools
- Highly Capable Programs
- Intervention Programs
- Learning Assistance Programs
- Leadership and Activities
- Library Instruction
- Multilingual Programs (MLL)

- Online High School
- Partnerships
 - Lighthouse Cooperative
 - Parent-Teacher-Student Association (PTSA)
 - Port Gardner Parent Partnership
 - Mental Health providers
 - Natural Leaders
- Readiness to Learn Parent Centers
- Science Resource Center
- Special Education
 - Achieve (behavior support)
 - Deaf and Hard of Hearing Specialists
 - Developmental Kindergarten
 - Developmental Pre-School
 - Extended Resource Room
 - Life Skills
 - Occupational / Physical Therapy
 - 18-21 programs
 - GOAL – Gaining Ownership of Addult Life
 - STRIVE – Students Transitioning Responsibly into Vocational Experiences
 - Resource Room
 - School Psychologists
 - Speech and Hearing Therapy
 - Vision Impaired Service
- Technology Instruction & Labs - Video Production, Programing, Robotics, etc.
- Transitional Kindergarten
- Title I Programs – Math & Reading
- Virtual Academy
- Wireless Computer Carts

These specialized or nontraditional educational programs can have a significant impact on the student capacity of school facilities. Variations in student capacity between schools are often a result of the number of specialized programs offered at specific schools. These specialized programs require classroom space, which can reduce the permanent capacity of the buildings housing these programs. For example, some students leave their regular classroom for some time to receive instruction in these specialized programs. Newer schools within the district have been designed to accommodate many of these programs. However, older schools often require space modifications to accommodate specialized programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the building.

District educational program standards will undoubtedly change over time as a result of changes in the program year, specialized programs, class size, grade span configurations, use of new technology, and other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for changes to the revised educational program standards.

Educational Program Standards - Elementary Schools

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
20.5	Kindergarten
20.5	General Education - Grades 1-3
24	General Education - Grades 4-5
10	Special Education - Pre-School (Developmental)
10	Special Education - Kindergarten (Developmental)
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
- Students are provided music and technology instruction.
- At least one Special Education Resource Room is part of the curriculum.
- Design capacity for new schools:
 - 600 students
- Actual capacity of individual schools may vary depending on the educational programs offered and/or housed at a particular school.

Educational Program Standards – Middle Schools and High Schools

As a result of scheduling conflicts for student programs, the need for specialized rooms for specific programs, and the need for teachers to have a workspace during planning periods, it is not possible to achieve 100% utilization of teaching stations. Based on an analysis of the actual utilization of secondary schools, the standard utilization rate is ~85%, resulting in the following target class sizes.

Middle School

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
24	General Education - Grades 6-8
24	Special Education - Resource Room
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
18	Multilingual Learner (MLL)

High School

- School capacity is determined using the following:

<u>Students per room</u>	<u>Grade level / Program</u>
24	General Education - Grades 9-12
24	Special Education - Resource Room
10	Special Education - Achieve (behavior support)
15	Special Education - Extended Resource Room
10	Special Education - Life Skills
18	Multilingual Learner (MLL)

Middle School and/or High School

- Students are also provided educational opportunities such as:
 - Art Labs
 - Auto Shop (high school only)
 - Career & Technical Education (CTE)
 - Challenge and Advanced Placement Program
 - Dual Credit Programs – College in the High School
 - Drama rooms (high school only)
 - Health and Fitness
 - Marketing (high school only)
 - Music rooms – Band, Orchestra, Strings, Jazz Band, Choir
 - Navy Junior Reserve Officer Training Corps (high school only)
 - Technology Labs
 - Science / STEM Labs
- Design capacity for new schools:
 - Middle schools = 825 students
 - High schools = 1,500 students
- Actual capacity of individual schools may vary depending on the educational programs offered and/or housed at a particular school.

Minimum Levels of Service

RCW 36.70A.020 requires that public facilities and services necessary to support new housing developments shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards. These “minimum levels of service” in the Everett School District are established as an average class size no larger than the following:

- **Class Size Goals**
 - 24 Kindergarten
 - 25 Grades 1-3 General Education
 - 26 Grade 4 General Education
 - 27 Grade 5 General Education
 - 29 Grades 6-8 General Education
 - 30 Grades 9-12 General Education
- **2021 Actual Class Size Average - based on the October 1, 2021 count of student enrollment**
 - 20.0 Kindergarten
 - 20.6 Grades 1-3 General Education
 - 24.2 Grades 4-5 General Education
 - 24.1 Grades 6-8 General Education
 - 24.5 Grades 9-12 General Education

School Boundary Changes

The Everett School District recognizes that school boundaries need to be modified occasionally to respond to changes in student enrollment and/or educational programs. Boundary changes can be an effective method of reducing the need for new school construction and are also necessary when new schools or classroom additions are built.

A good example of changing school boundaries to reduce the need for additional classroom space began with the 2020-21 school year. The district instituted a limited re-configuration of high school boundaries in response to significant enrollment growth in the southern end of the district. The re-configuration will be phased in over four years through 2023.

Trends in Programs, with Potential Impacts on district facilities

- Aerospace & Advanced Manufacturing Pathway
- Medical & Health Pathway
- Information & Communication Pathway
- STEM (Science, Technology, Engineering, and Mathematics), CTE (Career and Technical Education), and AP (Advanced Placement) program growth
- Flexible space for multiple uses – “maker” spaces, robotics, project-based learning, etc.
- Extended learning opportunities – after-school and/or summer activities
- Expansion of high school credit class offerings at middle schools (science, languages, etc.)
- 1:1 technology for students
- Early learning programs - Birth to 3 years and 3 to 5 years
- Industry pathway partnerships
- Post high school support opportunities
- Technology accessibility for community
- Support for strategic partners whose work is aligned with the district’s student learning mission
- Centralized storage and staging facilities for assessment, curriculum and textbooks, and STEM materials
- Expanded course offerings - Orchestra (strings), etc.
- Cost-effective solutions for serving high-need students that are currently outsourced to programs, such as the NW Regional Learning Center and Denny Youth Center

Section 3

Capital Facilities Inventory

SECTION 3: CAPITAL FACILITIES INVENTORY

Under the GMA, cities, and counties are required to inventory capital facilities used to serve existing development. The purpose of the following facilities inventory is to establish a baseline for determining what facilities will be required to address existing deficiencies and accommodate future demand (student enrollment) at acceptable or established levels of service. This section provides an inventory of capital facilities owned and operated by the Everett School District including schools, portables, developed school sites, undeveloped land, and support facilities. School facility capacity was inventoried based on the space required to accommodate the district's educational program standards outlined in Section 2. A map showing the locations of district school facilities is provided in Figure 1 on page 1-3.

Schools

Everett School District's elementary schools include grades K-5, middle schools include grades 6-8, and high schools include grades 9-12.

OSPI calculates school capacity by dividing the gross square footage of a building by a standard square footage per student. OSPI uses the following in their calculations: 90 sq. ft. per kindergarten through grade six student, 117 sq. ft. per grade seven and grade eight student, 130 sq. ft. per grade nine through grade twelve student, and 144 sq. ft. per disabled student (WAC 392-343-035). This method is used by the state as a simple and uniform approach for determining school capacity for purposes of allocating available state funding assistance to school districts for school construction.

This method is not considered an accurate reflection of the actual capacity required to accommodate the educational programs of each school and/or the district.

For this CFP, capacity is based on the number of teaching stations within each building and the space requirements of the specific educational program as described in Section 2. The school capacity inventory is summarized in Table 1.

Portables

Portables are used as interim classroom space to house students until permanent classroom facilities can be provided, and as a way to help prevent overbuilding. Portables are not a solution for housing students on a permanent basis. The typical useful life of a portable is 30 to 40 years. The ages of the district's portables range from 4 to 55 years. The portables capacity inventory is summarized in Table 2.

For this CFP, the costs of portable relocations have not been included in the formula for determining developer impact fees.

Support Facilities

In addition to schools, the Everett School District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 3.

Undeveloped Land

The Everett School District owns the following additional sites not currently used for school purposes:

- 35th Street & Grand Avenue
 - 1.38 acres
 - Long-term lease with the City of Everett - Doyle Park
- 36th Street & Norton Avenue
 - 2.96 acres
 - Long-term ground lease with Housing Hope
- Cadet Way Property
 - 9.25 acres
 - Located north of Jefferson ES
- Seattle Hill Road & State Route 527
 - 18.94 acres
 - Future school site
- 180th Street SE
 - 24.81 acres
 - Future site of comprehensive high school #4
- Strumme Road
 - 10.55 acres
 - Future site of elementary school #19

Section 4

Student Enrollment

SECTION 4: STUDENT ENROLLMENT

Historical and Current Enrollment Trends

From the early 1970s through the early 1980s, student enrollment in the district was relatively constant. Beginning in 1983 student enrollment showed a steady increase through 2001. Fueled by historically low-interest rates and an active housing market in the Mill Creek East UGA Plan area, district enrollment rose again through 2009. Shortly thereafter district's enrollment felt the effect of the economic recession. The district's enrollment declined through 2012. Between 2012 and 2019 the district's enrollment has increased each year. Due to COVID-19 related issues, district enrollment decreased in 2020, with a slight increase in 2021. Districtwide enrollment is projected to increase through 2031. Enrollment projections from 2032 to 2044 are linked directly to OFM population forecasts and show a steady increase as well.

2022-2027 Enrollment Projections

This CFP has been prepared using enrollment projections, for 2022 through 2027, as provided by W. Les Kendrick of Educational Data Solutions (Kendrick). This enrollment projection method was chosen because it uses a grade progression method (cohort survival analysis) that tracks the progress of students as they progress from grade to grade. This method tracks enrollment each year at each grade span as students move through the K-12 system, and projects enrollment based on actual enrollment changes over the previous five years. After completing the initial forecast, the numbers were adjusted using new home construction data, county population forecasts, and forecasts of the future K-12 population in the county. The Kendrick methodology is described in more detail in Appendix E. The Kendrick enrollment projections (medium) are presented in Tables 4, 5, and 6. All enrollment figures shown in this CFP are FTE as of October 1 of the year indicated.

For comparison purposes, Table 5 also contains enrollment forecasts from two other sources. A historical cohort-survival projection was prepared by OSPI (detailed projections in Appendix C) and an OFM Ratio projection was prepared by Shockey Planning Group. The OFM Ratio method (described in more detail in Appendix D) is based on a percentage of the district's population as predicted by OFM and Snohomish County.

Based on the Kendrick enrollment projections (medium-range), overall district enrollment will increase by 628 students over the next six years, reflecting an increase of approximately 3.20% over the 2021 enrollment levels. Table 6 provides a breakdown of the Kendrick enrollment projections by grade level span for every year from 2022 to 2027.

2044 Enrollment Projections

Long-range enrollment projections are much more speculative than short-range projections. They are still useful in developing comprehensive plans for future facilities and sites. Kendrick produces projections through 2031 and OSPI produces projections through 2027. Therefore, enrollment projections for 2044 are presented in Table 7 using just the OFM Ratio Method.

The OFM projections for 2044 indicate that total enrollment in the district will increase by 3,958 students to 23,578, an increase of 20.17% over the 2021 enrollment levels. Enrollment in 2044 is projected to be higher at all levels. An analysis of future capacities and facility needs is provided in Section 5.

Section 5

Capital Facilities Plan

SECTION 5: CAPITAL FACILITIES PLAN

Facilities Needs 2022-27

Elementary School

There are currently existing permanent capacity deficiencies at the elementary school level. As of 2021, the district elementary enrollment was 917 students over the permanent building capacity. These students are housed in ninety-three (93) portable classrooms. Twelve of the district's eighteen elementary schools are currently over their permanent building capacity. By 2027, the district is projected to grow by an additional 310 elementary students. In 2023, the district is projected to have the highest elementary enrollment at 9,867, a growth of 430 students. The plan to address these needs is through the construction of additional classroom space, and the purchase and/or relocation of portables. The plan, as detailed in the CFP, is to construct 10 additional classrooms with a capacity of 220.

Middle School

There are existing permanent capacity deficiencies at the middle school level. As of 2021, the district middle school enrollment was six (6) students over the permanent building capacity. These students are housed in thirty (30) portable classrooms. Only one of the district's five middle schools is over the permanent building capacity. Middle school enrollment is projected to continue to grow through 2027, with a growth of 192 students. The plan is to address the needs at individual schools through the purchase and placement and/or relocation of portables. The plan, as detailed in the CFP, does not include the construction of any new classroom space.

High School

District-wide, the high schools do not have existing permanent capacity deficiencies. Nonetheless, one of the district's three high schools is currently 228 students over the permanent building capacity. By 2027, the high school enrollment is projected to grow by an additional 126 students. At that time, two of the district's three high schools are projected to be over permanent building capacity. The district is projected to have the highest high school enrollment in 2023 with 5,710 students, a growth of 167 students. The plan to address part of these needs is through a phased-in modified attendance boundary adjustment (2020-2023) and the purchase and placement and/or relocation of portables at the affected schools. The plan, as detailed in the CFP, does not include the construction of any new classroom space.

District-wide

Enrollment

The district-wide enrollment is projected to gradually increase each year from 2021 to 2025, and then level off through 2027. During this same period, the anticipated enrollment levels will continue to exceed the 2021 capacities at the elementary and middle school levels. The increase in enrollment can be seen in all areas of the district. Enrollment and capacity projections are presented together for comparison purposes in Table 8 – *Permanent Facility Capacity Calculations 2021-2027 & 2044*.

Land

Most of the recent housing development and, as a result, the increase in our student enrollment has been and is anticipated to continue to be, in the southern part of the district. Most of the developable land in that part of the district within the urban growth area has already been developed. This trend could increase the need for school facilities in this area beyond those described below.

State law, Vision 2050, and the Snohomish County Code each address school facilities planning. To help plan for anticipated growth in student enrollment, especially in the southern part of the district, the district has been searching for developable assemblages of property large enough to site another elementary school. However, the availability of undeveloped land within this part of Snohomish County's Urban Growth Area (UGA) is extremely limited.

It would be more efficient from a student accessibility and transportation perspective to look at sites closer to the anticipated growth and outside the UGA rather than further away and within the UGA. It would be burdensome and inequitable to displace residents and diminish housing stock with school facilities where other alternatives exist that require less family displacement, less housing stock demolition, and are more proximate to the students than potential school sites further north.

The district anticipates the need to continue to look outside of the UGA to locate parcels large enough to accommodate a school, where appropriate. The district is allowed to locate elementary schools outside the UGA. Under Snohomish County's zoning code, elementary schools are allowed in rural areas, although RCW 36.70A.213 imposes certain conditions on the extension of public facilities and utilities to serve schools sited in rural areas. RCW 36.70A.213(1)(b) & (c)

Busing

Due to the impacts, difficulties, and high cost of transporting students over long distances, the district believes busing students long distances from the south end of the district to the north end is not the most appropriate method of addressing all the expected south-end growth.

Planned Improvements Adding Student Capacity

The following is an outline of the projects that add capacity and are considered necessary to accommodate the students forecasted in the Kendrick enrollment projections for the district through 2027. Timelines for these projects can be found in Table 9 – *Capital Facilities Plan*.

Elementary Schools

District-wide elementary school enrollment is projected to reach 9,747 in 2027 as shown in Table 8, an increase of 310 students from the 2021 enrollment of 9,437. This is 1,227 more students than the existing 2021 elementary school capacity of 8,520. In response to this increase in enrollment, the district is planning:

- 1) Additional classroom space as part of two new in lieu of modernization projects – 14 classrooms with a projected capacity of 308 will be constructed. The location of these additional classrooms (estimated costs between 2022-2027): Jackson ES – 10 classrooms (\$10,852,000); Madison ES – 4 classrooms (\$2,692,000)*. (*anticipated project completion - Fall 2028)
Total estimate - \$13,544,000
- 2) Portable classrooms (7) will need to be relocated or purchased to provide enough classroom space at individual schools.

Total estimate - \$1,825,000

The estimated cost of elementary school permanent facility improvements is: \$13,544,000

Middle Schools

District-wide middle school enrollment is projected to increase to its highest level of 4,832 in 2027. The existing 2021 middle school capacity of 4,634 will not be adequate to accommodate the projected enrollment. To provide for the enrollment increases at individual schools, portable classrooms (8) will need to be purchased or relocated to provide sufficient classroom space while avoiding additional permanent facility construction expenses. No other projects adding capacity are planned through 2027. Total estimate - \$1,825,000

The estimated cost of middle school permanent facility improvements is: \$0.

High Schools

District-wide high school enrollment is projected to increase to its highest level of 5,710 in 2023. At that point, only one of the district's three high schools is projected to be over their permanent building capacity. The plan to address the needs, between 2022 and 2027, is through the continuation of a modified attendance boundary adjustment and the purchase or relocation of portables at the affected schools. As enrollment increases at individual schools, portable classrooms (6) will need to be purchased or relocated to provide enough classroom space. Total estimate - \$1,050,000

The estimated cost of high school permanent facility improvements is: \$0

Future School Site Properties

180th Street SE

In 2007 the district purchased property on 180th St. SE as a future site for two schools. The construction of the first school, Tambark Creek ES, was completed in 2020. The remainder of the site remains undeveloped and is the planned location of a future high school. As part of the purchase and sale agreement the district issued, to the developer, the equivalent of \$4,660,000 worth of Mitigation Fee Credits toward future impact/mitigation fees. The developer can use the certificates in lieu of paying impact/mitigation fees. This practice will continue until the retirement of the current credit balance of \$79,750.

Seattle Hill Road & SR 527

In 1997 & 1998 the district purchased an assemblage of properties for a future school site at the southeast corner of Seattle Hill Rd and Bothell-Everett Highway. Over the years the district demolished and removed all structures from the site. There is an established wetland on the property. The site remains undeveloped and is the planned location of a future middle school.

Property Purchases

To accommodate future growth and the facilities needs of the district, the district plans to continue to acquire approximately 11 acres of additional property in the southeastern portion of the district in the vicinity of Strumme Road for a future elementary school. The district currently owns 2 properties in this area. In accordance with applicable state, regional, and county planning policies, the district finds that this property is an appropriate location for a future elementary school, given the anticipated student enrollment area and growth, and the limited availability of suitable land in south Snohomish County to equitably meet the anticipated student demand.

The cost to purchase these properties is estimated at: \$5,000,000

Planned Improvements Not Adding Student Capacity

The following is an outline of the projects that do not add capacity but are considered necessary to accommodate and support the educational program in the district through 2027. Timelines for these projects can be found in Table 9 – *Capital Facilities Plan*.

Elementary Schools

- Jackson Elementary School - new in lieu of modernization
- Madison Elementary School - new in lieu of modernization

The cost of these improvements is estimated at: \$73,808,000

Middle Schools

- Nothing planned

The cost to complete this improvement is estimated at: \$0

High Schools

- Cascade High School - Science Building - new in lieu of modernization
- Cascade High School - Cafeteria and kitchen upgrades
- Cascade High School - Bleacher replacement
- Everett High School - Cafeteria & classroom modernization
- HM Jackson High School - STEM classroom upgrades
- HM Jackson High School - Bleacher replacement

The cost of these improvements is estimated at: \$32,797,000

Safety and Security Projects & ADA Upgrades

- Upgrades to building access and controls, fire alarms, site security, and ADA upgrades

The cost of these improvements is estimated at: \$7,458,000

Clean Buildings Act

- Upgrades to building to meet the requirements of the Clean Building Act – HVAC, roofing, and flooring systems

The cost of these improvements is estimated at: \$48,490,000

Technology Projectors and infrastructure (included in 2016 Bond & Levy)

- Classroom devices, related infrastructure, support, training, professional development

The cost of these improvements is estimated at: \$17,432,000

Technology Infrastructure & Upgrades

- WIFI-mobile devices, multi-media classroom display systems, security cameras, network/data security, cybersecurity systems, data center systems, WIFI
- Upgrade electrical systems district-wide - Including data server rooms emergency backup generators and fiber optic network systems
- Student Information System - including software and staff development

The cost of these improvements is estimated at: \$73,381,000

Other School Projects

- District-wide upgrades to heating, ventilation, and air conditioning systems, exterior and interior finishes, roofing, electrical, site work, freezer & cooler replacement (3 schools), and other miscellaneous systems upgrades

The cost of these improvements is estimated at: \$9,089,000

Other Projects

- Replace playground equipment – 8 schools
- Replace Readerboards – 19 schools
- Memorial Stadium - replace synthetic turf and track; Baseball stadium upgrades
- South satellite bus facility

The cost of these improvements is estimated at: \$16,621,000

Facilities Needs 2027-2044

Planned Improvements

To house the district-wide projected enrollment (OFM) from 2027 through 2044, the district would need to construct new schools and/or classroom additions at various school sites throughout the district. To prepare for this projected growth, the district will need to acquire additional sites for new schools.

To accommodate the enrollment growth from 2027 to 2044 the district anticipates the need for the following facilities:

- Elementary school level
 - 119 Classrooms / 2,610 capacity
 - Equivalent to four (4) new schools and additions to existing schools
- Middle school level
 - 41 Classrooms / 993 capacity
 - Equivalent to one (1) new school and additions to existing schools
- High school level
 - 21 Classrooms / 507 capacity

Table 9
Capital Facilities Plan

	Estimated Project Cost by Year - in \$ Millions						Total Cost	Secured Bond/Levy ¹	Secured Other ²	Unsecured Other ³
	2022	2023	2024	2025	2026	2027				
Improvements Adding Student Capacity

CAPITAL FACILITIES FINANCING PLAN

Six-Year Finance Plan

The *Capital Facilities Plan* (Table 9) demonstrates how the Everett School District intends to fund new construction and improvements to school facilities for the years 2022 through 2027. The financing components include 1) secured funding from capital projects bonds and levies; 2) secured funding from other sources - property sales, school mitigation, and impact fees, state funding assistance from prior construction projects, and mitigation fee credits from the 2007 purchase of the 30-acre property on 180th St SE; and 3) unsecured future funding sources - school mitigation and impact fees not yet collected, bonds and levies not yet approved and grants. The financing plan also separates projects and portions of projects which add permanent building capacity from those which do not.

Funding for the Plan

General Obligation Bonds

Bonds are typically used to fund the construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond. Bonds are sold and then retired through the collection of property taxes. The Everett School District passed capital improvements bonds for \$96.5 million in 1990, \$68.5 million in 1996, \$74.0 million in 2002, \$198.9 million in 2006, and \$149.7 million in 2016. Historically, most major projects have been financed by these bonds.

Capital Levies

In February 2022, the voters of the district approved a \$325.5 million replacement Capital Levy. In April 2016, the voters of the district approved an \$89.6 million replacement Capital Levy for Safety, Building, and Instructional Technology Improvements. In 2010, voters approved a Building Repair and Technology levy authorizing the district to collect \$48 million from property taxes over six years for capital improvements to facilities and technology.

School Construction Assistance Program (SCAP)

State funding assistance comes from the Common School Construction Fund (28A.515 RCW). Bonds are sold on behalf of the fund and then retired from revenues accruing predominantly from the sale of renewable resources (i.e. - timber) from state school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the State Board of Education can establish a moratorium on certain projects.

School districts may qualify for state funding assistance for a specific capital project. To qualify, a project must first meet a state-established criterion of need. This is determined through a formula that specifies the amount of square footage the state will help finance to house the enrollment projected for the district. If a project qualifies, it can become part of a state prioritization system. This system prioritizes the allocation of available funding resources to school districts statewide based on seven prioritization categories. Funds are then disbursed to the districts based on a formula that calculates district assessed valuation per pupil relative to the whole state assessed valuation per pupil to establish the percent of the total project cost to be paid by the state for eligible projects. The 2022 state funding assistance percentages, for recognized project costs, range from a minimum of 19.47% to a maximum of 95.46%. The district's current state funding assistance percentage is: 55.05%.

State funding assistance can only be applied for and received for major school construction projects. Site acquisition and minor improvements are not eligible to receive funding assistance from the state. Because the availability of state funding assistance has not kept pace with the rapid enrollment growth occurring in many of Washington's school districts, sometimes funding assistance from the state is not received by a school district until after a school has been constructed. In such cases, the district must "front fund" a project. That is, the district must finance the complete project with local funds. Sometimes borrowing funds that are allocated to future projects, until the state distributes their funding assistance. When the state funding assistance is received, the future projects' accounts are reimbursed.

Currently, the state has determined that the Everett School District has excess student capacity, and, therefore, is not currently eligible for state funding assistance on projects that provide increased student capacity. The district remains eligible for state funding assistance for modernization and new in lieu of modernization projects.

Construction Cost Allocation (CCA): This number is generated by OSPI as a guide for determining the area cost allocation for new school construction. The CCA is adjusted regularly for inflation. As of July 1, 2022, the CCA has been adjusted to \$246.83 per square foot.

School Impact Fees

Impact fees, assessed on new housing developments, have been adopted by several jurisdictions as a means of supplementing traditional funding sources for the construction of public facilities needed to accommodate the population growth attributed to the new development. School impact fees are generally collected by the permitting agency at the time of issuance of building permits or, in a limited number of instances, the issuance of certificates of occupancy. The district's impact fees are calculated on worksheets contained in Appendix A and are summarized in Table 11.

Impact fees have been calculated utilizing the formula in Chapter 30.66C SCC. The resulting figures are based on the district's cost per dwelling unit: to purchase land for school sites, make site improvements, construct schools, and purchase, install or relocate portables. Credits have also been applied in the formula to account for state funding assistance to be reimbursed to the district and projected future property taxes to be paid by the owner of a dwelling unit. The costs of projects that do not add capacity or which only address existing deficiencies have been eliminated from the variables used in the calculations as indicated in Table 12 – *Impact Fee Variables*.

Calculation Criteria / Impact Fee Variables (See Table 12 – *Impact Fee Variables*)

Student Factor: The student factor or Student Generation Rate (SGR) is the average number of students generated by each housing type, whether single-family detached dwellings or multiple-family dwellings. Multiple-family dwellings in a single structure, are broken out into zero-to-one bedroom units and two or more bedroom units.

Pursuant to a requirement of Chapter 30.66C SCC, each school district is required to conduct a student generation study within their jurisdiction. This is done to "localize" generation rates for purposes of calculating impact fees. A description of this methodology is contained in Appendix B.

The current student generation rates for the district are:

Table 10
Student Generation Rates

Housing Type	K-5	6-8	9-12	K-12
Single Family	0.301	0.088	0.069	0.458
Multiple Family, 0-1 BR	0.011	.000	.000	0.011

Student Generation Rate Study

MEMORANDUM

To: Charles Booth
Facilities & Planning Specialist
Everett School District

Date: March 31, 2022

From: Tyler Vick
Managing Director

Benjamin Maloney
Demographer/Data Analyst

Project No.: F2253.01.001

Re: Student Generation Report— Everett School District

At the request of the Everett Public Schools (District/EPS), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent single-family (2014–2021) and multifamily (2017–2021) construction within the district. This document details the methodology FLO used to create the SGRs for EPS; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2014 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) March 2022 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of two residential construction developments that were erroneously listed as having been completed between 2017 and 2021. These consisted of two mobile home sites that have been present since at least 2010. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 2,757 SF units and 27 MF buildings completed between 2014 and 2021 (SF) and the period between 2017 and 2021 (MF). While the majority of the SF construction consisted of units classified as "Single Family Residence – Detached" (2,440 units), a variety of units with other SF use codes were also constructed, including duplexes, condominiums, and manufactured homes (owned and leased). MF development ranged from three and four family residences to 301+ unit construction. About 66 percent (1,105 units) of these new MF units were 2+ BR units, while the remainder (577 units) were 0–1 units.

All students (grades kindergarten [K] through 12) in the March 1, 2022, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2014–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2014 and 2021) from the SCAO were compared with the District's March 2021 SIS, and the number of students at each grade level living in those units was determined. The 2,757 SF units were compared to the 20,608 students enrolled within the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

9–12	190	0.069
K–12	1,262	0.458

Multifamily Developments

While SF data are nearly completely accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another on occasion. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

FLO reached out to the building management at the seven projects constructed between January 2017 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Farm By Vintage, Gateway, Silver Creek Apartment Homes, and Riverview Apartments. Despite numerous attempts, no bedroom information could be received from Kinect at Broadway, The Landing at Port Gardner, and HopeWorks Station II for the 28 students living at units within these buildings. Based on trends within and surrounding the district, we assumed 90 percent of the students would reside within a 2+ BR unit with the remaining 10 percent residing within a 0–1 BR unit.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's March 2022 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 577 0–1 BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

K–12	6	0.011

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's March 2022 SIS and determining the number of students at each grade level living in those units. It is estimated that 1,105 2+ BR units were constructed from 2017 to 2021. Matches to current students are indicated in the table below.

Appendix D

OFM Ratio Enrollment Projection Methodology

Enrollment Forecasts OFM Ratio Method

The Growth Management Act requires that capital facility plans for schools consider *enrollment* forecasts that are related to official *population* forecasts for the district. Snohomish County prepares the population estimates by distributing official estimates from the Washington Office of Financial Management (OFM) to the school district level. In February 2022 the County adopted updated official school district population projections through 2044 (the horizon year for its GMA planning).

Table D-1			
Historical Student/Population Ratio			
Year	Population*	FTE Student Enrollment	Ratio
2006	122,733	18,538	15.10%
2007	124,578	18,573	14.91%
2008	126,150	18,743	14.86%
2009	127,730	18,828	14.74%
2010	129,842	18,660	14.37%
2011	130,441	18,613	14.27%
2012	131,111	18,590	14.18%
2013	132,833	18,272	13.76%
2014	135,654	19,159	14.15%
2015	138,715	19,453	14.02%
2016	142,060	19,700	13.87%
2017	145,052	19,854	13.69%
2018	147,361	20,051	13.61%
2019	150,119	20,143	13.42%
2020	148,194	19,525	13.18%
2021	150,347	19,620	13.05%

Population: 2010 and 2020: Federal Census.

Other: Official County Estimate Enrollment: OSPI

The official Census population count for Snohomish County in 2020 was 827,957. The official population projection for all of Snohomish County is 1,136,310 in 2044. For the Everett School District, the County's official Census total in 2020 is 148,194, increasing to an estimated 214,341 in 2044.

The OFM ratio method computes past enrollment as a percentage of the past population and then projects how those percentage trends will continue into the future. Table D-1 shows population estimates developed by Snohomish County over the past 15 years. Enrollments as reported by the Office of the Superintendent of Public Instruction (OSPI) are shown along with the computed ratio of the two figures.

Ratio estimates have shown a continual decline since 2006, reflecting a decline in the number of students per household as the population grows. A more significant decline in the ratio occurred in 2020 and 2021, likely due to the effects of the COVID-19 pandemic with its remote teaching, homeschooling, student transfers, and other anomalies. For this reason, future ratios and enrollment estimates (Table D-2) did not rely solely on the 2020 and 2021 numbers.

For its planning purposes, the district has accepted the County's estimated population for 2044 (214,341). The 2022-2044 population estimates were prorated using that figure, an average of 2811 new residents per year. The district assumes that the student population ratio will decline to 11.00% in 2044. The resulting enrollment forecasts are presented in Table D-2.

Readers are reminded that long-range enrollment forecasts are general estimates only. They will be reviewed and revised every two years as part of the updates required by the County Code (SCC 30.66C).

Table D-2 Future Enrollments - Ratio Method

Appendix E

Kendrick Enrollment Projection Methodology

Kendrick Enrollment Projection Methodology

W. Les Kendrick, Ph.D., Educational Data Solutions, LLC

Enrollment for the Everett School District was projected using grade progression methods (cohort survival ratios) that track the progress of students as they progress from grade to grade. This method compares the enrollment in a given year at a specific grade (e.g., 2nd grade) to the enrollment at the previous grade from the previous year (1st grade). The ratio of these two numbers provides an indication of whether enrollment typically stays the same, grows, or declines as students progress from one grade to the next. The progression ratios at each grade level were averaged over several years and then applied to the current year's grade level enrollment (e.g., 2nd grade) to predict next year's enrollment at the subsequent grade (e.g., 3rd grade). This was done for every grade except kindergarten. The numbers were then adjusted and modified based on additional information about housing and population growth within the District (more on this below).

Kindergarten enrollment was projected by comparing the kindergarten enrollment in a given year to county births 5 years prior to that year (birth-to-k ratio). The average of this number for the last several years was then used to predict next year's enrollment. The average was also applied to future known birth cohorts to project subsequent years. For years in which birth data was not available, births were projected based on forecasts of the county population available from State and local jurisdictions, State birth forecasts, the correlation between State and County birth rates, and an assessment of the most recently available fertility rates for the county.

After completing the initial forecast, the numbers were adjusted using new home construction data, county population forecasts, and forecasts of the future K-12 population in the county. New Home construction data was obtained from New Home Trends, including information about currently permitted units as well as information about future planned development within the Everett School District. Population forecasts for the county were obtained from State and county planning offices. And a forecast of the population for the Everett School District was created based on forecasts of growth for neighborhoods in and around the District and recent population estimates for the District. All of this information was considered and used to adjust the final forecast numbers so that they would more closely reflect expected changes in housing and population growth within the District's boundary area in the coming years.

Kendrick Enrollment Projections – Medium Range 2022-27

Enrollment Projections by Grade

Levels of Service Report

2021-22**Levels of Service Report***(October 2021 Enrollment)***Minimum Levels of service**

Washington state law (RCW 36.70A.020) requires that public facilities and services necessary to support new housing developments shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards (minimum levels of services).

The Everett School District sets the minimum levels of service as the district-wide average class size and no larger than the class size goals. The class size goals are listed on page 2-4. The average class sizes for the 2021-22 school year are shown below.

Average Class Size	
Elementary	
Kindergarten	20.0
Grades 1 - 3	20.6
Grades 4 - 5	24.2
Middle School	
Grades 6 - 8	24.1
High School	
Grades 9 - 12	24.5

Subject: RE: Update on County inputs to school district Capital Facilities Plans
Attachments: AV_2022_SF_MF.pdf; SDFORE2022-release_Supplemental-Info.pdf

Hello all,

Attached are the 2022 average assessed valuations for single family and multifamily units by school district.

The other attachments is supplemental population information from Steve Toy:

Attached is some additional material associated with the 2044 GMA population forecasts by school district information that were sent out earlier this week that the school districts may find helpful. In particular, the first table in the attachment showing the distribution of 2020-2044 population growth by jurisdictions within school districts is something that was requested at the School District CFP Update Kick-Off meeting on January 11th.

Notes:

- The Snohomish County Council adopted [Ord. 22-003](#) on February 23, 2022 (effective March 6, 2022), updating the Countywide Planning Policies (CPPs) to include the 2044 Initial Growth Targets recommended by Snohomish County Tomorrow (SCT). The 2044 Initial Growth Target information in Appendix A and B of the CPPs may be helpful since they were the basis for the school district forecasts.

The updated CPP document can be viewed on the [SCT homepage](#) and clicking on the “Countywide Planning Policies” link in the left margin.

- The webpage for the Snohomish County 2022 Biennial School District CFP update is live and will be updated periodically. <https://snohomishcountywa.gov/4037/Biennial-Update-to-School-Districts-CFPs>
- Thank you to those who have submitted their 2021 Annual Impact fee report – please send it in if you have not.

Please let me know if you have any questions.

Thank you,

Eileen

Subject: Update on County inputs to school district Capital Facilities Plans

Good afternoon,

This is to let you know that we have encountered a minor setback in completing the single family and multifamily assessed valuations and anticipate completing this work by early next week. I will send a follow-up email with that information. However, attached is the 2044 GMA Population forecast by school district.

If you have not done so, can you please submit your annual impact fee reports to Chris Carlson (chris.carlson@co.snohomish.wa.us). Hoping to received your 1st CFP drafts by the end of April.

Thank you and please let me know if you have any questions.

Eileen

Re: Snohomish County--2022-S-4168--60-day Notice of Intent to Adopt Amendment

Dear Ms. Canola:

Thank you for sending the Washington State Department of Commerce (Commerce) the 60-day Notice of Intent to Adopt Amendment as required under [RCW 36.70A.106](#). We received your submittal with the following description.

Proposed amendment to adopt an ordinance relating to the Snohomish County school impact fee mitigation program. The ordinance would adopt eleven school district Capital Facility Plans (CFPs) and amend the school impact fee schedule in Chapter 30.66C of the Snohomish County Code (SCC).

We received your submittal on 07/21/2022 and processed it with the Submittal ID 2022-S-4168. Please keep this letter as documentation that you have met this procedural requirement. Your 60-day notice period ends on 09/19/2022.

We have forwarded a copy of this notice to other state agencies for comment.

Please remember to submit the final adopted amendment to Commerce within ten days of adoption.

If you have any questions, please contact Growth Management Services at reviewteam@commerce.wa.gov, or call Kirsten Larsen, (360) 280-0320.

Sincerely,

Review Team
Growth Management Services

2022 Biennial Update to School District Capital Facilities Plans (CFPs)

Project Summary

Snohomish County operates a school impact fee program authorized by RCW 82.02.040 and the Washington State Growth Management Act (GMA) under Chapter 36.70A RCW. This GMA-based impact fee program was created in 1999 and codified in Chapter 30.66C SCC, and meets the requirements of RCW 82.02.050. School districts that wish to collect impact fees must provide a school-board adopted capital facilities plan (CFP) for review by the County Planning Commission and County Council that fulfills the specifications of state law, the County comprehensive plan, and the County code.

The County assesses and collects the fees based on the school impact fee table in County code for proposed development projects, and transfers those collected fees to the respective school district. Under the GMA, the imposition of impact fees is based on the premise that new development should pay a proportionate and equitable share of the public capital costs associated with growth. Therefore, school impact fees provide mitigation for the impacts of new development on public school facilities and can only be spent for the public facilities defined in state law (RCW 82.02.050(4)). Under the County's current impact fee program, school impact fees are due at the time of building permit issuance and must be spent within ten years of collection.

In general, school districts' CFPs are reviewed by the County on a biennial basis; they expire two years from the date of adoption by the County Council or when the County Council adopts an updated CFP that meets state and County requirements. A school district's CFP generally expires on December 31, and when adopted by the County Council, the new plan becomes effective on January 1. Amendments to a school district's CFP constitute amendments to the County's comprehensive plan (Capital Facilities Plan) and County code (SCC 30.63C.100). Only those school districts that submit CFPs to the County for review and adoption are eligible to collect school-related impact fees.

Appendix F of the General Policy Plan contains the specific requirements for the school districts' CFPs. These requirements call for each school CFP to include the following elements:

Project Contact

Eileen Canola, *Senior Planner*

Email Eileen Canola
425.262.2253

**Click thumbnail below for
Snohomish County School
Districts Map (PDF)**

- Enrollment projections that are consistent with 2044 county population forecasts;
- CFP 2022-27: Index # 1.0037.pdf
- Inventory of existing sites, facilities, and their capacities;
 - Proposed capital improvement projects to address additional demands of growth (existing deficiencies may also be addressed, but cannot be financed with impact fees);
 - A schedule and financing program (at least six years) to fund the proposed projects; and
 - Impact fee support data required by the formula in Chapter 30.66C SCC, including a district-specific analysis to determine the student generation rate component of the fee calculation.

The student generation rate (SGR) is a calculation used by the school districts in determining their impact fees. SGRs are the average number of students by grade (elementary, middle, and high school) typically generated by housing type. These numbers are obtained by a survey of all new residential units permitted by the jurisdictions within that school district during the most recent five to eight year period.

Snohomish County is served by fifteen public school districts that are governed by locally elected school boards.

Project Status

Eleven school districts have indicated interest in participating in Snohomish County's school impact fee program and submitted an updated capital facilities plan as a first draft for review by County staff. Copies of the capital facilities plans are available below. The Snohomish County Planning Commission is scheduled to review the districts' final drafts in August / September 2022, and the target date for County Council review and approval is November 2022. This page will be updated with the final versions that will be considered by the Planning Commission and County Council, please check back.

Chapter 30.66C

SCHOOL IMPACT MITIGATION

Sections:

30.66C.010	Purpose and applicability.
30.66C.020	School impact fee eligibility.
30.66C.030	Expiration of district plans.
30.66C.035	Updating of district plans.
30.66C.040	Minimum requirements for district capital facilities plans.
30.66C.045	Impact fee calculation formula.
30.66C.050	Department review and transmittal.
30.66C.055	District capital facilities plan and fee adoption.
30.66C.060	Correction of deficiencies.
30.66C.065	Delays.
30.66C.100	Fee required.
30.66C.110	Impact fee schedule - exemptions.
30.66C.120	Service areas established.
30.66C.130	Impact fee limitations.
30.66C.150	Credit for in-kind contributions/existing lots.
30.66C.160	SEPA mitigation and other review.
30.66C.200	Collection and transfer of fees.
30.66C.210	Use of funds.
30.66C.220	Refunds.
30.66C.230	Reimbursement for county administrative costs, legal expenses, and refund payments.
30.66C.300	Administrative adjustment of fee amount.
30.66C.310	Appeals of decisions - procedure.
30.66C.320	Arbitration of disputes.

30.66C.010 Purpose and applicability.

(1) The purpose of this chapter is:

- (a) to ensure that adequate school facilities are available to serve new growth and development; and
 - (b) to require that new growth and development pay its proportionate share of the costs of new school facilities.
- (2) This chapter shall apply to all development, except for the following:
- (a) Development that
 - (i) was the subject of a prior SEPA threshold determination that resulted in the imposition of school mitigation conditions under chapter [30.66C](#) SCC as codified prior to January 1, 1999; and
 - (ii) has not undergone modifications or other administrative revisions following issuance of the SEPA threshold determination. An applicant subject to a prior version of this chapter may consent in writing to the application of this chapter.
 - (b) Permits for attached or detached accessory dwelling units.
 - (c) Permits for remodeling or renovation.
 - (d) "Housing for Older Persons" as defined by [42](#) U.S.C. § [3607\(2\)](#), when guaranteed by a restrictive covenant.
 - (e) Permits for temporary dwellings.
 - (f) Permits for new single-family detached units and duplexes constructed on legal lots created prior to May 1, 1991.
 - (g) Building permits for residential development on or located within:
 - (i) existing lots recognized through the administrative lot status process pursuant to SCC [30.41A.030](#) or SCC [30.41B.025](#);
 - (ii) unrecorded short plats filed with the county prior to September 12, 1972, and pursuant to SCC [30.41B.025\(2\)](#); and
 - (iii) exempt subdivisions or large tract subdivisions, including five acre segregations pursuant to SCC [30.41A.030\(1\)](#) or SCC [30.41B.025\(1\)\(a\)](#), 20-acre segregations pursuant to SCC [30.41A.030\(2\)](#) or [30.41B.025\(1\)\(b\)](#), and 80-acre segregations pursuant to SCC

[30.41A.020\(7\)](#) or SCC [30.41B.020\(7\)](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 04-140, Jan. 12, 2005, Eff date Jan. 29, 2005; Amended by Amended Ord. 21-018, June 9, 2021, Eff date June 19, 2021).

30.66C.020 School impact fee eligibility.

(1) Any district serving the county shall be eligible to receive school impact fees upon adoption by the council of a capital facilities plan for the district by reference as part of the capital facilities element of the comprehensive plan.

(2) A condition of eligibility shall be that a district must provide documentation that it has petitioned every other city and/or county served by that district to establish a school impact fee or mitigation program. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.030 Expiration of district plans.

For purposes of impact fee eligibility, a district's capital facilities plan shall expire two years from the date of its adoption by the council, or when an updated plan, as required in Appendix F of the comprehensive plan, is adopted by the council, whichever date first occurs. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.035 Updating of district plans.

(1) A district's capital facilities plan shall be updated by the district and transmitted to the county by the district at least 60 days prior to its biennial expiration date. The district's updated plan shall be submitted by the department to the council for its consideration within forty-five (45) days of the department's receipt of complete and accurate information as required in Appendix F of the comprehensive plan. In the event any district desires to amend its capital facilities plan prior to the biennial expiration date, the district may propose an amendment to be considered by the county pursuant to the procedures established by Appendix F. Such amendments shall be considered by the county no more than once per year unless the board of directors of such district declares, and the county finds, that an emergency exists.

(2) A district's updated capital facilities plan may include revised data for the fee calculation and a corresponding modification to the impact fee schedule, consistent with the comprehensive plan and SCC [30.66C.040](#) through [30.66C.065](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.040 Minimum requirements for district capital facilities plans.

To be eligible for school impact fees, districts must submit capital facilities plans to the county pursuant to the procedure established by this chapter. District capital facilities plans shall contain data and analysis necessary and sufficient to meet the requirements of the GMA and Appendix F of the comprehensive plan. The plans must provide sufficient detail to allow computation of school impact fees according to the formula contained in SCC [30.66C.045](#). Additional elements may be contained within a school district capital facilities plan, provided that any such additional elements are consistent with those mandatory elements outlined in Appendix F. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.045 Impact fee calculation formula.

(1) *General.* The formula in this section provides the basis for the impact fee schedule for each district serving the county. District capital facilities plans shall include a calculation of its proposed impact fee schedule, by dwelling unit type as provided in SCC [30.66C.100\(1\)](#), utilizing this formula. In addition, a detailed listing and description of the various data and factors needed to support the fee calculation is included herein.

(2) *Determination of projected school capacity needs.* Each district shall determine, as part of its capital facilities plan, projected school capacity needs for the current year and for not less than the succeeding five-year period. The capital facilities plan shall also include estimated capital costs for the additional capacity needs, and those costs provide the basis for the impact fee calculations set forth in this section.

(3) *Cost calculation by element.* The fees shall be calculated on a "per dwelling unit" basis, by "dwelling unit type" as set forth below.

(a) *Site acquisition cost element.*

$$\{[B_{(2)} \times B_{(3)}] \div B_{(1)}\} \times A_{(1)} = \text{Site Acquisition Cost Element}$$

Where:

$B_{(2)}$ = Site Size (in acres, to the nearest 1/10th)

$B_{(3)}$ = Land Cost (Per Acre, to the nearest dollar)

$B_{(1)}$ = Facility Design Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added with the result being the "Total Site Acquisition Cost Element" for purposes of the final school impact fee calculation below.

(b) *School construction cost element.*

$$[C_{(1)} \div B_{(1)}] \times A_{(1)} = \text{School Construction Cost Element}$$

Where:

$C_{(1)}$ = Estimated Facility Construction Cost

$B_{(1)}$ = Facility Design Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added and multiplied by the square footage of permanent facilities divided by the total square footage of school facilities, with the result being the "Total School Construction Cost Element" for purposes of the final school impact fee calculation below.

(c) *Relocatable facilities (portables) cost element.*

$$[E_{(1)} \div E_{(2)}] \times A_{(1)} = \text{Relocatable Facilities Cost Element}$$

Where:

$E_{(1)}$ = Relocatable Facilities Cost

$E_{(2)}$ = Relocatable Facilities Student Capacity

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added and multiplied by the square footage of relocatable facilities divided by the total square footage of school facilities, with the result being the "Total Relocatable Facilities Cost Element" for purposes of the final school impact fee calculation below.

(4) *Credits against cost calculation - mandatory.* The following monetary credits shall be deducted from the calculated cost elements defined above for purposes of calculating the final school impact fee below.

(a) *State match credit.*

$D_{(1)} \times D_{(3)} \times D_{(2)} \times A_{(1)}$ = State Match Credit

Where:

$D_{(1)}$ = Boeckh Index

$D_{(3)}$ = Square footage of school space allowed per student, by grade span, by the Office of the Superintendent of Public Instruction

$D_{(2)}$ = State Match Percentage

$A_{(1)}$ = Student Factor (for each dwelling unit type)

The above calculation shall be made for each of the identified grade levels (e.g. elementary, middle, junior high and/or senior high). The totals shall then be added with the result being the "Total State Match Credit" for purposes of the final school impact fee calculation below.

(b) *Tax payment credit.*

$\{[(1 + F_{(1)})^{10}] - 1\} \{F_{(1)}(1 + F_{(1)})^{10}\} \times F_{(2)} \times F_{(3)}$ = Tax Credit

Where:

$F(1)$ = Interest Rate

$F(2)$ = District Property Tax Levy Rate

$F(3)$ = Average Assessed Value (for each dwelling unit type)

(5) *Adjustments against cost calculation - elective by district.* Recognizing that the availability of other sources of public funds varies among districts, each district may provide an additional credit against school impact fees which the district determines will provide the best balance in system improvement funding within the district, between school impact fees and other sources of local public funds available to the district. This adjustment may reduce, but may not increase, the school impact fee from the amount determined by application of the elements identified above. The adjustment, if any, applied by the district shall be specified within the district's capital facilities plan adopted by the county.

(6) *Calculation of total impact fee.*

(a) The total school impact fee, per dwelling unit, assessed on a development activity shall be the sum of:

Total Site Acquisition Cost Element

Total School Construction Cost Element

Total Relocatable Facilities Cost Element minus the sum of:

Total State Match Credit

Total Tax Payment Credit

Elective Adjustment by District expressed in Total Dollars per Dwelling Unit, by Dwelling Unit Type.

(b) The total school impact fee obligation for each development activity pursuant to the school impact fee schedule of this ordinance shall be calculated as follows:

Number of Dwelling Units, by Dwelling Unit Type multiplied by School Impact Fee for Each Dwelling Unit Type less the value of any in-kind contributions proposed by the school developer and accepted by the school district, as provided in SCC [30.66C.150](#). (Added by

Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 15-005, Mar. 18, 2015, Eff date Apr. 2, 2015).

30.66C.050 Department review and transmittal.

- (1) Upon receipt of a district's capital facilities plan (or amendment thereof) the department shall determine whether the plan meets the following requirements:
 - (a) the required plan contents and plan performance criteria outlined in Appendix F of the comprehensive plan are included in the document;
 - (b) The analysis contained within the district capital facilities plan is consistent with current data developed pursuant to the requirements of the GMA and Appendix F;
 - (c) Any school impact fee proposed in the district's capital facilities plan has been calculated using the formula contained in SCC Table 30.66C.050(1) of this chapter; and
 - (d) The district capital facilities plan has been adopted by the district's board of directors.
- (2) Upon finding that these requirements have been satisfied, the department shall transmit the district capital facilities plan to the planning commission.
- (3) The director is authorized to adopt policies and procedures for the establishment and operation of a technical review committee to assist the department in its review of capital facilities plans and the student factor methodologies used to support the plans. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.055 District capital facilities plan and fee adoption.

Any school district capital facilities plan adopted by the county council shall be incorporated into the capital facilities element of the county's comprehensive plan. Adoption of the district capital facilities plan shall constitute adoption of the schedule of school impact fees specified in the district's capital facilities plan as modified by SCC [30.66C.100](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.060 Correction of deficiencies.

Prior to its adoption by the council, should the department find a district's capital facilities plan to be deficient in any way, the department shall notify the district of the deficiency, identifying the specific matters found to be deficient, and shall indicate the standard for correction. The district shall then have forty-five (45) days (or such longer period as may be necessary to comply with applicable legal requirements) to correct the deficiencies and resubmit its revised, adopted capital facilities plan. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.065 Delays.

If a district fails to submit its biennial update of the district capital facilities plan at least 60 days before the expiration date, or if the department notifies a district of deficiencies in the district's proposed capital facilities plan and the district fails to correct identified deficiencies within 45 days (or such longer period as may be necessary to comply with applicable legal requirements), the department shall endeavor, but shall not be obligated, to complete review prior to the plan expiration date. If an updated district capital facilities plan has not been adopted by the council prior to the existing plan's expiration date due to the district's failure to submit an updated plan, the district shall be ineligible to receive school impact fees until the updated plan has been adopted by the council. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.100 Fee required.

- (1) Each development, as a condition of approval, shall be subject to the school impact fee established pursuant to this chapter. The school impact fee shall be calculated in accordance with the formula established in SCC [30.66C.045](#).
- (2) The fees listed in Table [30.66C.100\(1\)](#) represent one-half of the amount calculated by each school district in its respective capital facilities plan in accordance with the formula identified in SCC [30.66C.045](#).
- (3) The payment of school impact fees will be required prior to issuance of building permits, except as provided in SCC [30.66C.200\(2\)](#). The amount of the fee due shall be based on the fee

schedule in effect at the time of filing a complete application for development. For building permit applications received by the department more than five years after the filing of a complete application for development, the amount of the fee due shall be based on the fee schedule in effect at the time of building permit application.

(4) The department shall maintain and provide to the public upon request a table summarizing the schedule of school impact fees for each school district within the county.

(5) The fees set forth in Table [30.66C.100\(1\)](#) apply to developments that vest to county development regulations from January 1, 2021, to December 31, 2022.

(6) Building permits submitted after January 1, 1999, for which prior plat approval has been obtained under chapter [30.66C](#) SCC as codified prior to January 1, 1999, shall be subject to the school impact fees established pursuant to this chapter, as set forth in this section, except as provided in SCC [30.66C.010\(2\)](#).

Table 30.66C.100(1) School Impact Mitigation Fees

SCHOOL DISTRICT	SINGLE FAMILY per dwelling unit	MULTI-FAMILY 1-BEDROOM per dwelling unit	MULTI-FAMILY 2+ BEDROOMS per dwelling unit	DUPLEXES AND TOWNHOMES per dwelling unit

(Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 03-033, Apr. 9, 2003, Eff date Apr. 21, 2003; Amended by Amended Ord. 04-118, Nov. 23, 2004, Eff date Jan. 1, 2005; Amended by Ord. 05-108, Nov. 21, 2005, Eff date Jan. 1, 2006; Amended by Amended Ord. 06-086, Nov. 20, 2006, Eff date Jan. 1, 2007; Amended by Ord. 08-058, May 7, 2008, Eff date May 19, 2008; Amended by Amended Ord. 08-115, Nov. 5, 2008, Eff date Jan. 1, 2009; Amended by Ord. 10-097, Nov. 22, 2010, Eff date Jan. 1, 2011; Amended by Ord. 12-093, Nov. 19, 2012, Eff date Jan. 1, 2013; Amended by Ord. 14-053, Aug. 27, 2014, Eff date Sept. 13, 2014; Amended by Ord. 14-096, Nov. 24, 2014, Eff date Jan. 1, 2015; Amended by Amended Ord. 16-060, Aug. 24, 2016, Eff date Sept. 12, 2016; Amended by Amended Ord. 16-095, Nov. 14, 2016, Eff date Jan. 1, 2017; Amended by Amended Emerg. Ord. 16-117, Nov. 14, 2016, Eff date Nov. 14, 2016; Amended by Ord. 17-047, Aug. 9, 2017, Eff date Aug. 27, 2017; Amended by Amended Ord. 17-085, Dec. 20, 2017, Eff date Jan. 13, 2018; Amended by Amended Ord. 18-036, Oct. 3, 2018, Eff date Oct. 16, 2018; Amended by Amended Ord. 18-083, Nov. 19, 2018, Eff date Jan. 1, 2019; Amended by Ord. 20-072, Nov. 10, 2020, Eff date Jan. 1, 2021).

30.66C.110 Impact fee schedule - exemptions.

The council may, on a case-by-case basis, grant exemptions to the application of the fee schedule for low-income housing as defined in SCC [30.91H.220](#) and in accordance with the conditions specified under RCW [82.02.060\(2\)](#). To qualify for the exemption, the developer shall submit a petition to the director for consideration by the council prior to application for building permit. Conditions for such approvals shall meet the requirements of RCW [82.02.060\(2\)](#) and include a requirement for a covenant to assure the project's continued use for low-income housing. The covenant shall be an obligation that runs with the land upon which the housing is located, and shall be recorded against the title of the real property. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 15-005, Mar. 18, 2015, Eff date Apr. 2, 2015).

30.66C.120 Service areas established.

For purposes of calculating and imposing school impact fees, the geographic boundary of each district constitutes a separate service area. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.130 Impact fee limitations.

- (1) School impact fees shall be imposed for district capital facilities that are reasonably related to the development under consideration, shall not exceed a proportionate share of the costs of system improvements that are reasonably related to the development, and shall be used for system improvements that will reasonably benefit the new development.
- (2) School impact fees must be expended or encumbered for a permissible use within the time limits established in chapter [82.02](#) RCW.
- (3) To the extent permitted by law, school impact fees may be collected for capital facilities costs previously incurred to the extent that new growth and development will be served by the previously constructed capital facilities, provided that school impact fees shall not be imposed to make up for any existing system deficiencies.
- (4) A developer required to pay a fee pursuant to RCW [43.21C.060](#) for capital facilities shall not be required to pay a school impact fee pursuant to RCW [82.02.050](#) - [82.02.090](#) and this title for the same capital facilities. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Ord. 18-012, Mar. 14, 2018, Eff date Mar. 29, 2018).

30.66C.150 Credit for in-kind contributions/existing lots.

- (1) A developer may request, and the director may grant a credit against school impact fees otherwise due under this chapter for the value of any dedication of land, improvement to, or new construction of any capital facilities identified in the district's capital facilities plan provided by the developer. Such requests must be accompanied by supporting documentation of the estimated value of such in-kind contributions. All requests must be submitted to the department in writing prior to its determination of the impact fee obligation for the

development. Each request for credit will be immediately forwarded to the affected school district for its evaluation.

(2) Where a school district determines that a development is eligible for a credit for a proposed in-kind contribution, it shall provide the department and the developer with a letter setting forth the justification for and dollar amount of the credit, the legal description of any dedicated property, and a description of the development activity to which the credit may be applied. The value of any such credit may not exceed the impact fee obligation of the development.

(3) Where there is agreement between the developer and the school district concerning the value of proposed in-kind contributions, their eligibility for a credit, and the amount of any credit, the director may approve the request for credit and adjust the impact fee obligation accordingly, and require that such contributions be made as a condition of development approval. Where there is disagreement between the developer and the school district regarding the value of in-kind contributions, however, the director may render a decision that can be appealed by either party pursuant to the procedures in SCC [30.66C.300](#) - [30.66C.310](#).

(4) For any development subject to the provisions of this title that is sited on one or more legal lots created prior to May 1, 1991, a credit equal to the applicable impact fee for a single-family dwelling times the number of such pre-existing lots shall apply to the fee obligation of the development.

(5) For subdivisions, PRDs and other large-scale developments where credits for in-kind contributions or pre-existing lots are proposed or required, it may be appropriate or necessary to establish the value of the credit on a per-unit basis as a part of the development approval. Such credit values will then be recorded as part of the subdivision or other instrument of approval and will be used in determining the fee obligation - if any - at the time of building permit application for the development activity. In the event that such credit value is greater than the impact fee in effect at the time of permit application, the fee obligation shall be considered satisfied, and the balance of the credit may be transferable to future developments by the applicant within the same school district by agreement with the school district. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.160 SEPA mitigation and other review.

(1) The county may condition or deny development approval pursuant to the SEPA as necessary or appropriate to mitigate or avoid significant adverse impacts to school services and facilities, to assure that appropriate provisions are made for schools, school grounds, and safe student walking conditions, and to ensure that development is compatible and consistent with each district's services, facilities and capital facilities plan.

(2) Impact fees required by this chapter shall constitute adequate mitigation for impacts on capital facilities identified in the district's capital facilities plan; except that nothing in this chapter prevents issuance of a determination of significance under SEPA and conditioning or denial of the project based on specific adverse environmental impacts identified during project review. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.200 Collection and transfer of fees.

(1) An applicant must pay school system impact fees prior to building permit issuance, except as provided in subsection [\(2\)](#) of this section.

(2) An applicant may request a deferral of the payment of school impact fees. The deferral of school impact fees shall be allowed only for single-family attached and detached residential construction by a property owner having a contractor registration number or other unique identification number. The amount of impact fees that may be deferred under this subsection shall be determined by the fees in effect at the time the applicant applies for a deferral.

(a) For this subsection:

(i) "Applicant" means the property owner which includes an entity that controls, is controlled by, or is under common control with the applicant.

(ii) "Common control" means two or more entities controlled by the same person or entity.

(iii) "Control" means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether through the ownership of voting shares, by contract, or otherwise.

- (b) An applicant wishing to defer the payment of a school impact fee shall:
 - (i) Submit a signed and notarized deferred impact fees application and completed lien form signed by all owners of the property subject to the lien concurrent with the building permit application for the building subject to the impact fees. Multiple deferrals can be included on one application as long as the building permit applications are located within the same development and the applicant pays a separate administrative fee as required below for each single-family dwelling unit whether detached or attached;
 - (ii) Submit a signed and notarized certification that the applicant has requested deferral of impact fees for no more than a total of 20 building permits in the calendar year within unincorporated Snohomish County; and
 - (iii) Pay a non-refundable \$250.00 administration fee for each deferred impact fee application.
- (c) The lien shall:
 - (i) Be in a form approved and provided by the county;
 - (ii) Include the legal description, property tax account number, and address for each lot or unit the lien will encumber and identify the type and amount of the deferred impact fees;
 - (iii) Be binding and subordinate on all successors in title after the recording;
 - (iv) Be junior and subordinate to a first mortgage for the purpose of construction upon the same real property granted to the applicant who applied for the deferral of impact fees, but in no case shall the lien be in less than second place; and
 - (v) Be signed by all owners of the property, with all signatures acknowledged as required for a deed.
- (d) The lien shall be recorded prior to the issuance of the building permit for the building subject to the impact fees.

- (e) Each applicant eligible to defer impact fees shall only be entitled to receive deferrals for no more than a total of 20 building permits in unincorporated Snohomish County during each calendar year.
- (f) The applicant or property owner shall be responsible for the payment of recording fees.
- (g) The deferred impact fees for each single-family dwelling unit whether detached or attached shall be paid in full prior to whichever of the following occurs first:
 - (i) Scheduling final inspection;
 - (ii) Issuance of a certificate of occupancy;
 - (iii) The closing of the first sale of the property occurring after the recording of the lien; or
 - (iv) Eighteen months from the date of building permit issuance.
- (h) If the building for which the deferral of the impact fees is requested will be located within a subdivision or short subdivision, the subdivision or short subdivision shall be recorded prior to recording the lien for impact fees and issuance of the building permit.
- (i) Upon receipt of final payment of all deferred impact fees for a building permit, the county shall execute a release of the deferred impact fee lien. The applicant or property owner is responsible for submitting a lien release application to PDS. The applicant, at their own expense, will be responsible for recording the lien release after all deferred impact fees associated with a lot or unit subject to a lien have been paid.
- (j) Compliance with the requirements of the deferral option shall constitute compliance with subdivision or short subdivision conditions pertaining to the timing of the impact fee payment.
- (k) If deferred impact fees are not paid in accordance with terms authorized by state law and this section, the county may initiate foreclosure proceedings for the unpaid impact fees and all costs associated with the collection of the unpaid impact fees.
- (l) A request to defer school impact fees under this section may be combined in one application with a request to defer park and recreation impact fees under SCC [30.66A.020\(4\)](#) and road system impact fees under SCC [30.66B.340\(5\)](#).

(3) Districts eligible to receive school impact fees collected by the county shall establish an interest-bearing account separate from all other district accounts. The county shall deposit school impact fees in the appropriate district account within 10 days after receipt, and shall provide the receiving district with a notice of deposit.

(4) Each district shall institute a procedure for the disposition of impact fees and providing for annual reporting to the county that demonstrates compliance with the requirements of RCW [82.02.070](#), and other applicable laws. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Amended Ord. 16-060, Aug. 24, 2016, Eff date Sept. 12, 2016).

30.66C.210 Use of funds.

(1) School impact fees may be used by the district only for capital facilities that are reasonably related to the development for which they were assessed and may be expended only in conformance with the district's adopted capital facilities plan.

(2) In the event that bonds or similar debt instruments are issued for the advance provision of capital facilities for which school impact fees may be expended, and where consistent with the provisions of the bond covenants and state law, school impact fees may be used to pay debt service on such bonds or similar debt instruments to the extent that the capital facilities provided are consistent with the requirements of this title.

(3) The responsibility for assuring that school impact fees are used for authorized purposes rests with the district receiving the school impact fees. All interest earned on a school impact fee account must be retained in the account and expended for the purpose or purposes for which the school impact fees were imposed, subject to the provisions of SCC [30.66C.220](#) below.

(4) Each district shall provide the county an annual report showing the source and the amount of school impact fees received by the school district and the capital facilities financed in whole or in part with those school impact fees. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.220 Refunds.

(1) School impact fees not spent or encumbered within the time limits established in chapter [82.02](#) RCW shall be refunded pursuant to RCW [82.02.080\(1\)](#). For purposes of this chapter, "encumbered" means school impact fees identified by the district to be committed as part of the funding for capital facilities for which the publicly funded share has been assured, development approvals have been sought or construction contracts have been let.

(2) When the county seeks to terminate any or all impact fee requirements under this section, all unexpended or unencumbered funds, including interest earned, shall be refunded in accordance with RCW [82.02.080\(2\)](#).

(3) Refunds provided for under this section shall be paid only upon submission of a proper claim pursuant to county claim procedures. Such claims must be submitted within one year of the date the right to claim the refund arises, or the date that notice is given, whichever is later. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003; Amended by Amended Ord. 12-018, May 2, 2012, Eff date May 21, 2012; Amended by Ord. 18-012, Mar. 14, 2018, Eff date Mar. 29, 2018).

30.66C.230 Reimbursement for county administrative costs, legal expenses, and refund payments.

Each participating school district shall enter into an agreement with the county for reimbursement of the actual administrative costs of assessing, collecting and handling fees for the district, any legal expenses and staff time associated with defense of this chapter against district-specific challenges, and payment of any refunds provided under SCC [30.66C.220](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.300 Administrative adjustment of fee amount.

(1) Within 14 days of acceptance by the county of a building permit application, a developer or school district may appeal to the director for an adjustment to the amount of or an elimination of fees imposed under this chapter by submitting a written explanation of the basis for the appeal. The director may adjust the amount of or eliminate the fee, in consideration of studies

and data submitted by the developer and the affected school district, if one of the following circumstances exists:

- (a) The school impact fee assessment was incorrectly calculated;
- (b) Unusual circumstances exist that demonstrate the school impact fee is unfair as applied to the specific development;
- (c) A credit for in-kind contributions by the developer, as provided for under SCC [30.66C.150](#) above, is warranted;
- (d) Any other credit specified in RCW [82.02.060\(1\)\(b\)](#) is warranted; or
- (e) The school impact fee assessment was improper under RCW [82.02.020](#) or RCW [82.02.050](#) et seq.

(2) To avoid any delay pending resolution of the appeal, school impact fees may be paid under written protest in order to obtain development approval. Such written protest must be submitted at or prior to the time fees are paid, and will relate only to the specific fees identified in the protest. Failure to provide such written protest at the time of fee payment shall be deemed a withdrawal of any appeal to the director.

(3) Failure to file a written protest and to seek a timely appeal to the director shall preclude any appeal of the school impact fee pursuant to SCC [30.66C.310](#).

(4) Refunds approved under this section, or following an administrative appeal as provided in SCC [30.66C.310](#), shall be made to the current property owner at the time the refund is authorized, unless the current property owner releases the county and the school district from any obligation to refund the current property owner.

(5) The developer or the school district may appeal the director's decision as provided in SCC [30.66C.310\(1\)](#). (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.310 Appeals of decisions - procedure.

(1) Any person aggrieved by a decision to impose, impose modifications, or waive an impact fee under this chapter may appeal the decision to the hearing examiner. Where there is an

administrative appeal process for the underlying development approval, appeals of an impact fee under this chapter must be combined with the administrative appeal for the underlying development approval. Where there is no administrative appeal for the permit, then appeal of the impact fee shall proceed as a Type 1 appeal pursuant to chapter [30.71](#) SCC.

(2) The impact fee may be modified or refunded if paid under written protest in accordance with SCC [30.66C.300](#), upon a determination based on the application of the criteria contained in SCC [30.66C.300](#). Appeals shall be limited to application of the impact fee provisions to a specific development. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

30.66C.320 Arbitration of disputes.

With the consent of the developer and the affected district, a dispute regarding imposition or calculation of a school impact fee may be resolved by arbitration. (Added by Amended Ord. 02-064, Dec. 9, 2002, Eff date Feb. 1, 2003).

The Snohomish County Code is current through legislation passed November 9, 2021.

Updates

PSRC / Countywide Planning Policies / Code Amendment

PSRC - Vision 2050 Regional Growth Strategy

Figure 1 Regional Growth Strategy — Population Growth 2017–2044 (Illustrative)

PSRC Vision 2050 – School Siting

School Siting

School district boundaries have long been established, and some districts that were historically rural have become major suburban education providers. As a result, there are some districts that provide school services to both urban and rural populations, and some that own sites outside the urban growth area intended for future schools. Developing urban-serving schools on these outlying locations often requires expensive programs to transport students and encourages students to drive or be driven to schools.

Schools should be encouraged to become the hubs and gathering places of their communities by locating urban-serving schools in urban settings and designing facilities to better integrate with their urban neighborhoods. Collaborative planning between school districts and local governments on siting urban schools has been successful in identifying locations, problem-solving development challenges and encouraging walking and biking to schools.

In 2017, the Washington State Legislature amended the Growth Management Act to allow, under circumstances, schools serving urban and rural populations outside the urban growth area if certain conditions are met.

PSRC Vision 2050 – School Siting

Multicounty Planning Policies (MPPs) – Public Services (PS)

MPP-PS-26

Work cooperative with school districts to plan for school facilities to meet existing and future community needs consistent with adopted comprehensive plans and growth forecasts, including siting and designing schools to support safe, walkable access and best serve their communities

MPP-PS-27

Site schools, institutions, and other community facilities that primarily serve urban populations within the urban growth area where they will promote the local desired growth plans, except as provided by RCW 36.70A.211.

MPP-PS-28

Locate schools, institutions, and other community facilities serving rural residents in neighboring cities and towns and design these facilities in keeping with the size and scale of the local community, except as provided for by RCW 36.70A.211

MPP-PS-29

Site or expand regional capital facilities in a manner that (1) reduces adverse social, environmental, and economic impacts on the host community, especially on historically marginalized communities, (2) equitably balances the location of new facilities away from disproportionately burdened communities, and (3) addresses regional planning objectives.

PS-Action-2

Facilities Siting and Design: PSRC will facilitate cooperative efforts with special purpose districts and local jurisdictions to site and design facilities that enhance local communities in accordance with growth management goals and VISION 2050.

PS-Action-3

School Siting: PSRC will initiate and support discussions with the Office of the Superintendent of Public Instruction to facilitate updates that modernize school siting standards, especially those related to site area requirements. Updates should work to align school siting standards with the goals of the Growth Management Act and facilitate school districts' ability to better meet urban capacity needs.

PS-Action-4

Regional Support for School Siting Best Practices: PSRC will research and develop guidance on innovative methods to update regulations and local plans to develop a regional approach to school siting and to assist local jurisdictions and school districts in siting new schools in urbanized areas.

Adopted Countywide Planning Policies

CPP Policy General Public Services (PS)-21:

PS-21 “The County and cities should work collaboratively with school districts to plan for the siting and improvement of school facilities to meet the current and future community needs. Considerations should include recent growth, 6-year projections of population and student enrollment growth, adopted comprehensive plans including capital facilities plans, and the growth targets in Appendix B.

County Code Amendment

Minor Revision to Conditional Use Permit (CUP) Ordinance No. 21-011

- Increases the allowed building height for schools from 45ft to 55ft to allow for the construction of a third story.
- Increase the threshold for a minor revision to an approved conditional use permit for a K-12 school facility from a 10% increase to a 20% increase in gross floor area and trip generation. Provides greater flexibility to use an administrative process

Snohomish County 2024 Comprehensive Plan Update

Snohomish County Population Projections

- Total County population of 1,136,309 by 2044 based on PSRC VISION 2050 Regional Growth Strategy (RGS)
- Increase of 308,352 population from 2020 to 2044
- Projected annual average population increase is similar to past annual average
- Falls within low-high range of OFM 2017 GMA supplemental projections
- New OFM population projections are due in 2022

Regional Geographies in Snohomish County (RGS)

Metropolitan City: Everett

Core Cities: Bothell, Lynnwood

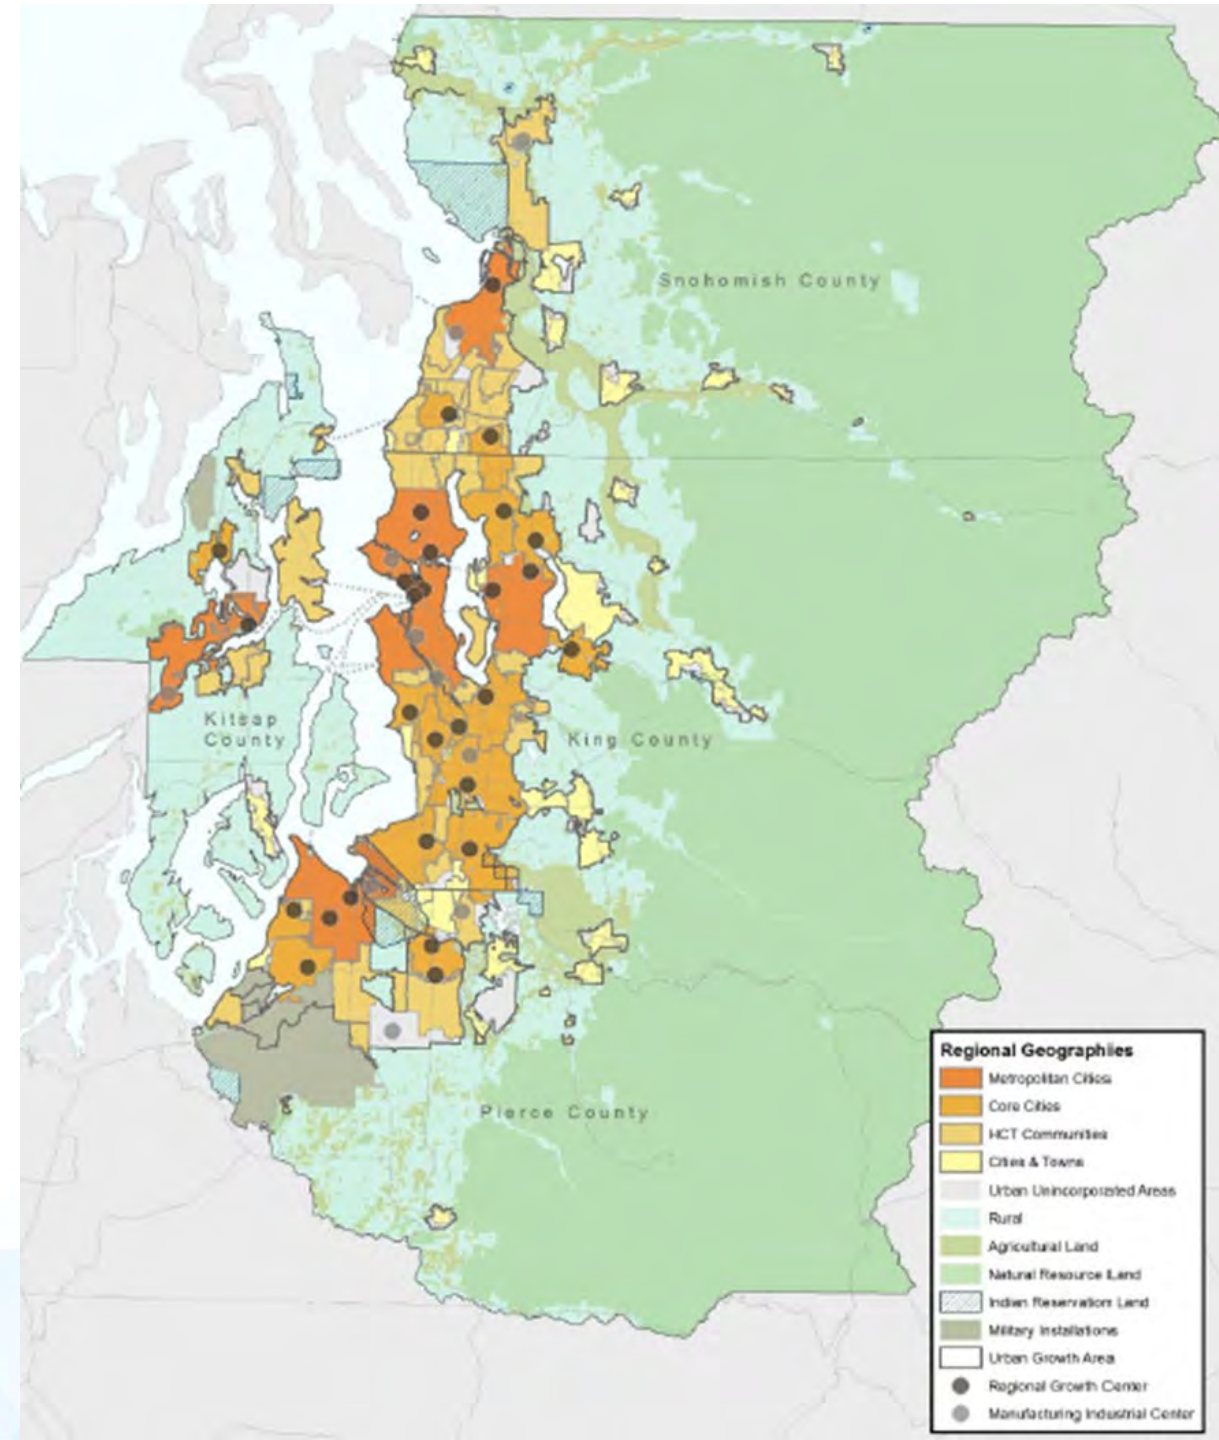

High Capacity Transit (HCT) Communities:

- Arlington, Edmonds, Marysville, Mill Creek, Mountlake Terrace, Mukilteo (cities)
- Bothell MUGA, Edmonds MUGA, Everett MUGA, Larch Way Overlap, Lynnwood MUGA, Mill Creek MUGA, Mukilteo MUGA (unincorporated portions of SWUGA)

Cities & Towns: Brier, Darrington, Gold Bar, Granite Falls, Index, Lake Stevens, Monroe, Snohomish, Stanwood, Sultan, Woodway

Urban Unincorporated Areas: Remaining Urban Unincorporated areas (Brier, Mountlake Terrace and Woodway unincorporated MUGAs, Paine Field area, Lake Stickney and Silver Firs Gap, Maltby UGA, and all unincorporated non-SW UGAs)

Rural: Rural Designated Lands

RGS Population Growth to 2044 Compared with Buildable Lands Capacity to 2035

Snohomish County

Past Growth Trends and Future Expectations Under RGS

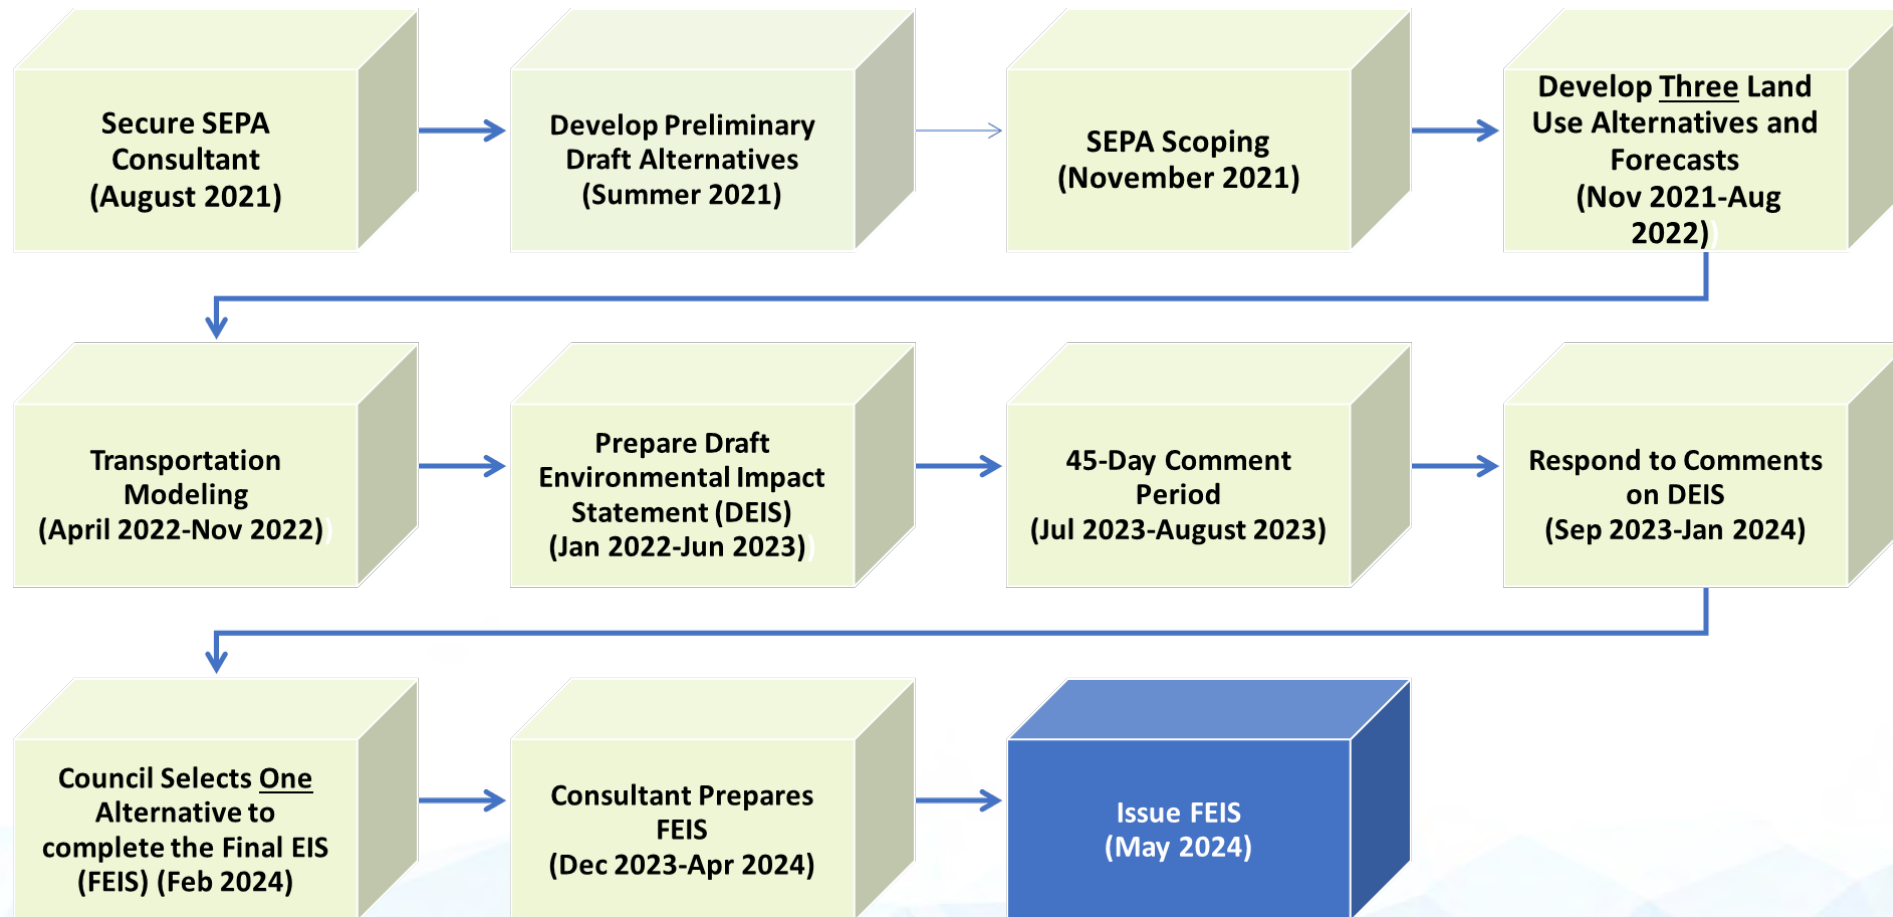

Alternatives

Alternative	Title	Description
1	No Action: Adopted Plans - Lower Growth	Zoning unchanged. Unincorporated urban growth area (UGA) subareas build to capacity or Initial 2044 Targets, whichever is less, and rural area accommodates no more than 8.5% of county population growth. Transportation network is adopted plan plus possible new projects to accommodate 2035-2044 growth. This alternative accounts for scenario if OFM Most Likely Forecast is lower than the Vision 2050 total for the county.
2	Medium: Focus on High-Capacity Transit Communities	Growth consistent with Vision 2050 and initial growth targets. Accommodate as much growth as possible in the core of the Southwest UGA with emphasis around high-capacity transit stations. Also consider ways to encourage larger variety of housing types within single family neighborhoods within the existing UGA, including opportunities to redesignate some locations from ULDR to UMDR in the unincorporated High-Capacity Transit (HCT) Communities regional geography from Vision 2050. May include minor UGA adjustments. Rely on multi-modal approach to transportation.
3	Higher Growth	Factors in possibility that the OFM Most Likely Forecast could exceed the Vision 2050 countywide target. Like Alternative 2, but factors in additional growth in core of the Southwest UGA near high-capacity transit stations. This alternative would include any UGA expansion proposals that get placed on the final docket. Higher total county growth associated with UGA expansions would be assumed. Rely on multi-modal approach to transportation, with new road projects to extend service to any UGA expansion areas. Rural area accommodates 4.5% of population growth.

Environmental Impact Statement

Environmental Impact Statement (EIS)

- An informational document that provides the County, public, and other agencies with environmental information to be considered in a decision-making process.
- An EIS describes:
 - proposed actions and alternatives;
 - existing conditions of the study area;
 - adverse environmental impacts that may occur if certain proposals are implemented;
 - mitigation measures to reduce or eliminate adverse impacts; and
 - potential significant, unavoidable, and adverse impacts.
- The EIS process includes several opportunities for public input.
- The EIS process will be integrated with the planning process and inform the development of the County's 2044 comprehensive plan goals and policies.

Capital Facilities Element

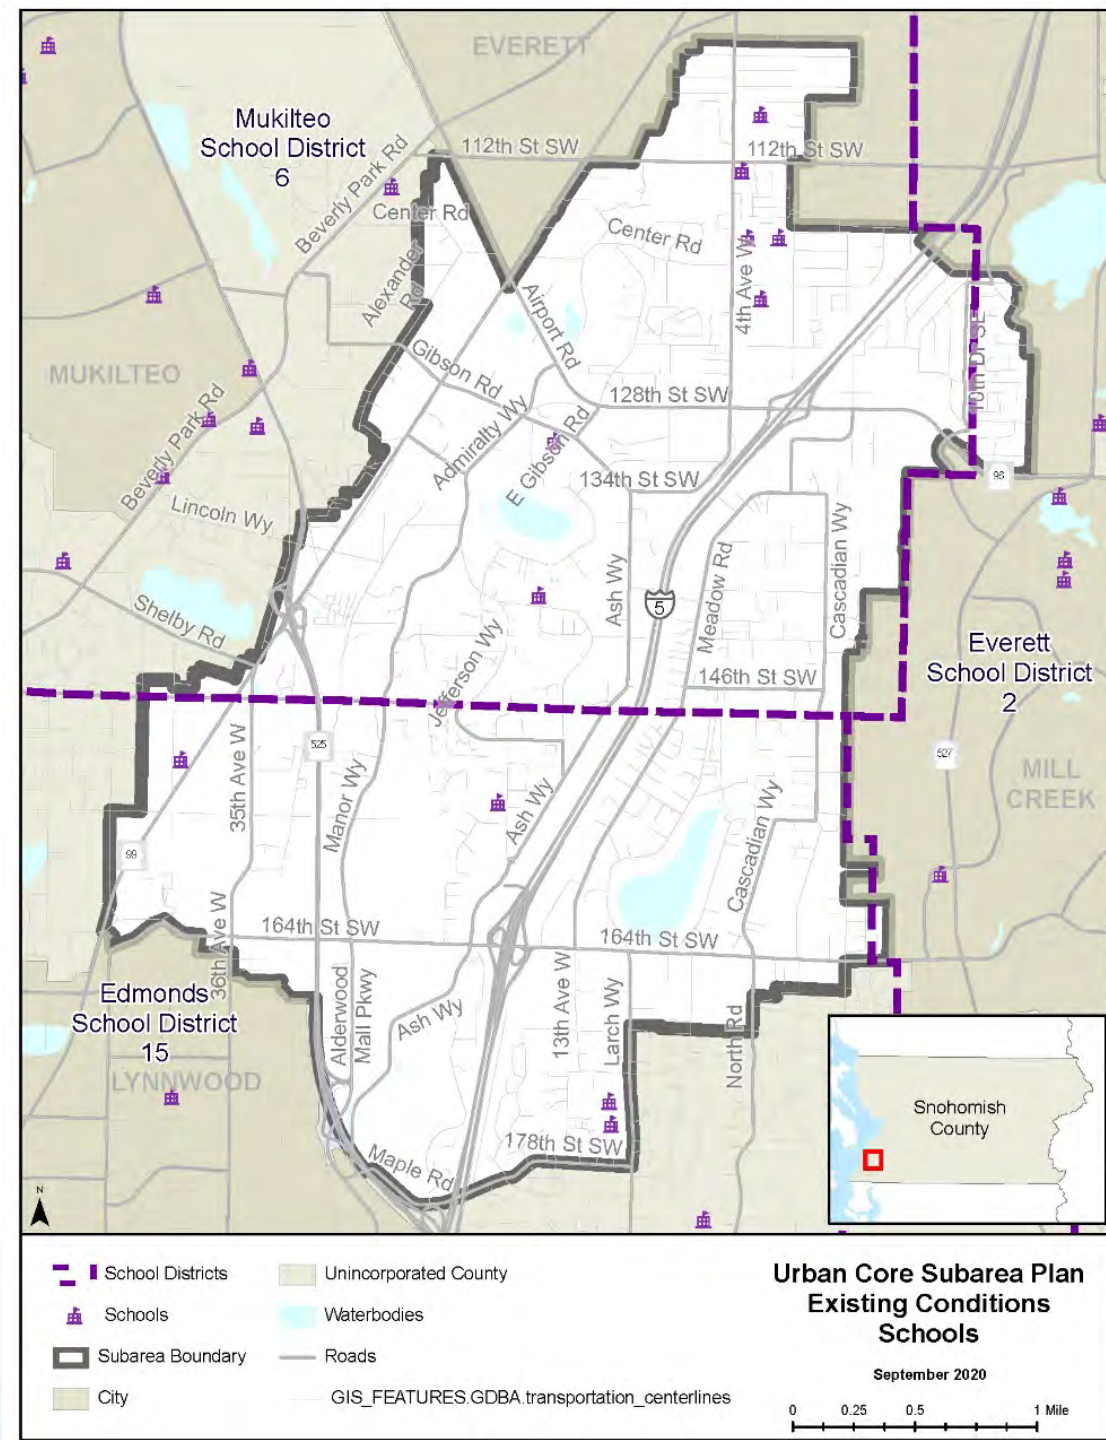

The Capital Facilities Plan will be folded into the Capital Facilities and Utilities Element. The Element will contain:

- Forecast of Future Needs
- Review Level of Service Standard
- Update Project Lists and Maps
- Statement of Assessment (Annual Capital Improvement Plan)

Southwest Urban Core Subarea Element

Snohomish County, in partnership with numerous interested parties, is planning for the arrival of light rail in the mid-2030s through the preparation of a subarea element.

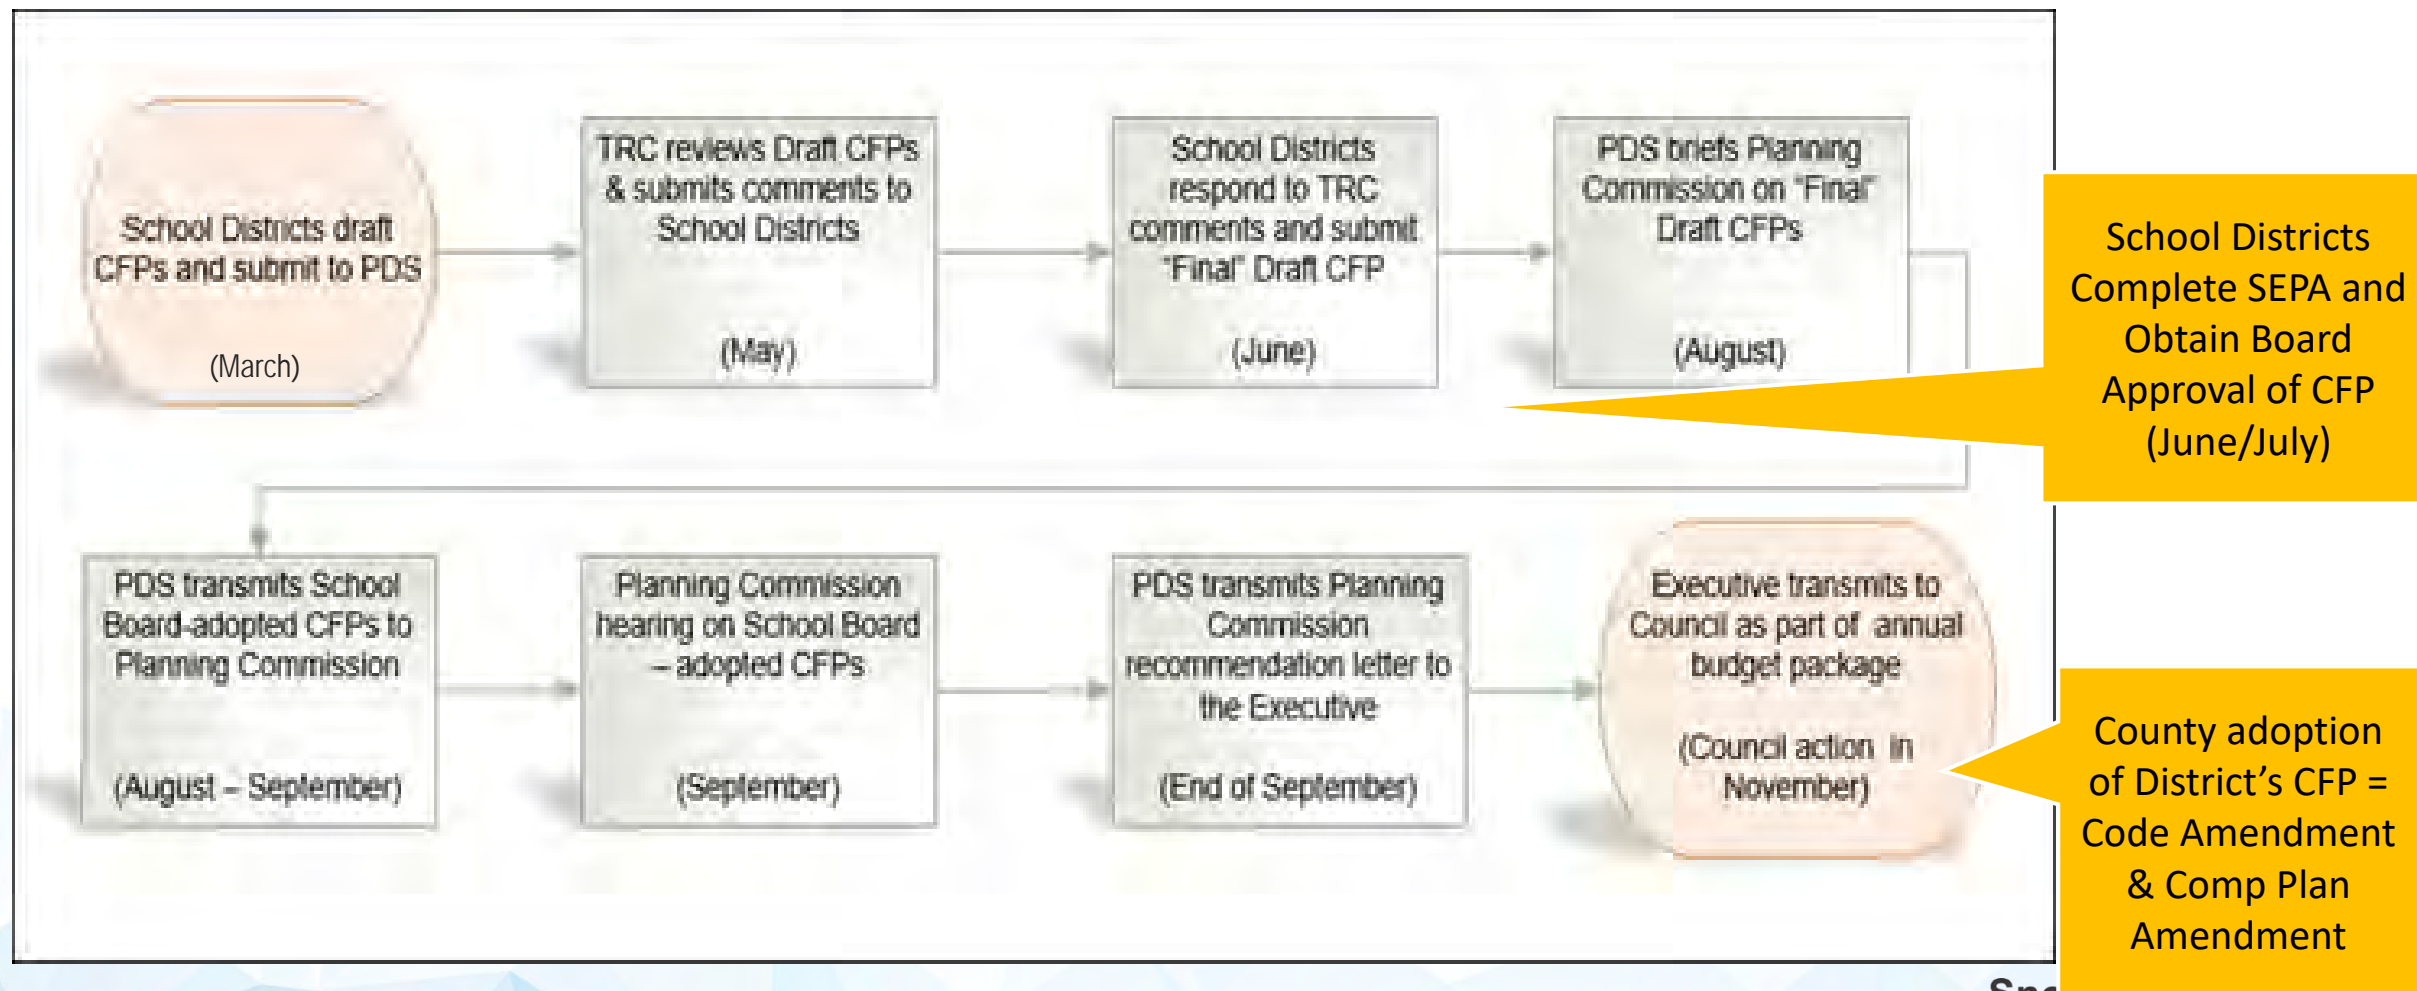

School Capital Facilities Plan Update

Schedule – Inputs - Review Process

Process for County Council Adoption of School District CFP

Working Schedule

Milestone	Target Date (2022)	Comments
Kick-off Meeting	January 11	
Inputs for Impact Fee Calculation to School Districts	February - March	
Establish County Project Webpage	March 30	
1 st Drafts due to County's TRC	April 29	Electronic submittal
TRC Comments due to School Districts on 1 st Draft	May 13	
2 nd Drafts due to County's TRC	June 30	Electronic submittal
SEPA process – School Districts to Complete	June - July	Signed copy to PDS
School Board Adoption of CFPs	June - early September	3 hardcopies to PDS
County sends to Dept. Commerce (60-day notice)	August	
Planning Commission Briefing	August 23	Attendance encouraged
Planning Commission Hearing	September 27	Attendance encouraged
County Council Review	October - November	Dates TBD

Review Criteria for School District CFPs: Appendix F

- **Future enrollment forecast by grade span including**
 - 6-year forecast (or more); description of forecasting methodology; consistency with OFM population forecasts
- **Inventory of Existing Facilities**
 - Location / capacity of existing school schools
 - *Clearly defined LOS standard*; description of education standard;
 - District-owned leased sites - location, description
 - Portables – number, locations, status
- **Forecast of Future Facility Needs & New Site Needs**
 - Existing needs for new schools / portables for existing deficiencies & projected growth (6 yrs.). New school sites needed
- **Financing Program (6 yrs.)**
 - Est. cost of construction, site acquisition, projects for growth related needs. Schedule and funding sources.
- **Impact Fee Support Data (if applicable)**
 - Calculation methodology; description of key variables
 - Data sources: definition, accurate and reliable
 - Fee schedule reflects student generation rates from single family, multi-family

Table 12
Impact Fee Variables

Criteria	Elementary	Middle	High
Site Acquisition Cost Element			
Site Size (acres)	15.00	0	0
Growth Related (2018-23)			
Average Land Cost Per Acre	\$300,000	\$300,000	\$300,000
Growth Related (2018-23)	\$257,351	\$0	\$135,200
Total Land Cost	\$4,500,000	\$0	\$0
Growth Related (2018-23)	\$3,860,258	\$0	\$0
Additional Land Capacity	565	0	0

Appendix G: Snohomish County General Policy Plan -- Appendix F

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington Growth Management Act (GMA) outlines thirteen broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. The public school districts serving Snohomish County residents have developed capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This Capital Facilities Plan (CFP) is intended to provide the Lake Stevens School District (District), Snohomish County, the City of Lake Stevens, the City of Marysville and other jurisdictions a description of facilities needed to accommodate projected student enrollment at acceptable levels of service over the next twenty-two years (2044), with a more detailed schedule and financing program for capital improvements over the next six years (2022-2027). This CFP is based in large measure on the 2015 Facilities Master Plan for the Lake Stevens School District.

When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan¹. This part of the plan establishes the criteria for all future updates of the District CFP, which is to occur every two years. This CFP updates the GMA-based Capital Facilities Plan last adopted by the District in 2020.

In accordance with GMA mandates and Chapter 30.66C SCC, this CFP contains the following required elements:

Element	See Page	Table
Future enrollment forecasts for each grade span (elementary, middle, mid-high and high).	17	5-2
An inventory of existing capital facilities owned by the District, showing the locations and student capacities of the facilities.	12	4-1
A forecast of the future needs for capital facilities and school sites; distinguishing between existing and projected deficiencies.	19 20	6-1 6-2
The proposed capacities of expanded or new capital facilities.	25	6-3

¹ See Appendix F of this CFP

Element	See Page	Table
A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.	22	6-3
A calculation of impact fees to be assessed and support data substantiating said fees.	Appendix A	
A report on fees collected through December 2021 and how those funds were used.	24	6-4

In developing this CFP, the guidelines of Appendix F of the General Policy Plan² were used as follows:

- Information was obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information is to be consistent with the State Office of Financial Management (OFM) population forecasts and those of Snohomish County.
- Chapter 30.66C SCC requires that student generation rates be independently calculated by each school district. Rates were updated for this CFP by The Blueline Group (See Appendix C).
- The CFP complies with RCW 36.70A (the Growth Management Act) and, where impact fees are to be assessed, RCW 82.02.
- The calculation methodology for impact fees meets the conditions and test of RCW 82.02. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources if impact fees are not available due to action by the state, county or the cities within their district boundaries.

Adoption of this CFP by reference by the County and cities of Marysville and Lake Stevens constitutes approval of the methodology used herein by those entities.

Overview of the Lake Stevens School District

The Lake Stevens School District is located six miles east of downtown Everett and encompasses most of the City of Lake Stevens as well as portions of unincorporated Snohomish County and a small portion of the City of Marysville. The District is located south of the Marysville School District and north of the Snohomish School District.

The District currently serves a student population of 9,256³ with seven elementary schools, two middle schools, one mid-high school, one high school and one homeschool partnership program (HomeLink).

² See Appendix G of this CFP

³ April 2022 Headcount Report

Elementary schools provide educational programs for students in kindergarten through grade five. Middle schools serve grades six and seven, the mid-high serves grades eight and nine and the high school serves grades ten through twelve. HomeLink provides programs for students from kindergarten through eighth grade. The District employs 616 certificated staff members and 606 classified staff for a total of 1,222.

Significant Issues Related to Facility Planning in the Lake Stevens School District

The most significant issues facing the Lake Stevens School District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Continued housing growth in the District.
- The need to have unhoused students before becoming eligible for state construction funding.
- The implementation of reduced class sizes at the K-3 level at all elementary schools.
- Uneven distribution of growth across the district and an imbalance in growth in the north and south ends of the district, requiring facilities to balance enrollment.
- Increased critical areas regulations, decreasing the amount of developable area on school sites.
- Discounted school impact fees and changes to how and when these fees are calculated and paid, none of which supports mitigating the true impact of development.
- The need for additional property and lack of suitable sites within Urban Growth Area (UGA) boundaries to accommodate school facilities.
- The elimination of the ability to develop schools outside of UGAs.
- The inability to add temporary capacity with portable classrooms on school sites without costly stormwater and infrastructure improvements.
- Aging school facilities.
- Projected permanent capacity shortfall by 2027 for K-5 of 1,633 students (with no improvements).

These issues are addressed in greater detail in this Capital Facilities Plan.

SECTION 2: DEFINITIONS

Note: Definitions of terms preceded by an asterisk (*) are provided in Chapter 30.9SCC. They are included here, in some cases with further clarification to aid in the understanding of this CFP. Any such clarifications provided herein in no way affect the legal definitions and meanings assigned to them in Chapter 30.9 SCC.

*Appendix F means Appendix F of the Snohomish County Growth Management Act (GMA) Comprehensive Plan, also referred to as the General Policy Plan (GPP).

*Average Assessed Value average assessed value by dwelling unit type for all residential units constructed within the district. These figures are provided by Snohomish County. The current average assessed value for 2022 is \$485,760 for single-family detached residential dwellings; \$169,461 for one-bedroom (*Small*) multi-family units, and \$239,226 for two or more bedroom (*Large*) multi-family units.

*Boeckh Index (See Construction Cost Allocation)

*Board means the Board of Directors of the Lake Stevens School District (“School Board”).

Capital Bond Rate means the annual percentage rate computed against capital (construction) bonds issued by the District. for 2022, a rate of 2.45% is used. (See also “Interest Rate”)

*Capital Facilities means school facilities identified in the District’s capital facilities plan that are “system improvements” as defined by the GMA as opposed to localized “project improvements.”

*Capital Facilities Plan (CFP) means the District’s facilities plan adopted by its school board consisting of those elements required by Chapter 30.66C SCC and meeting the requirements of the GMA and Appendix F of the General Policy Plan. The definition refers to *this* document, which is consistent with the adopted “2015 Facilities Plan for the Lake Stevens School District,” which is a separate document. Construction Cost Allocation (formerly the Boeckh Index) means a factor used by OSPI as a guideline for determining the area cost allowance for new school construction. The Index for the 2022 Capital Facilities Plan is \$246.83, as provided by Snohomish County.

*City means City of Lake Stevens and/or City of Marysville.

*Council means the Snohomish County Council and/or the Lake Stevens or Marysville City Council.

*County means Snohomish County.

*Commerce means the Washington State Department of Commerce.

*Developer means the proponent of a development activity, such as any person or entity that owns or holds purchase options or other development control over property for which development activity is proposed.

*Development means all subdivisions, short subdivisions, conditional use or special use permits, binding site plan approvals, rezones accompanied by an official site plan, or building permits (including building permits for multi-family and duplex residential structures, and all similar uses) and other applications requiring land use permits or approval by Snohomish County, the City of Lake Stevens and/or City of Marysville.

*Development Activity means any residential construction or expansion of a building, structure or use of land or any other change of building, structure or land that creates additional demand and need for school facilities but excluding building permits for attached or detached accessory apartments, and remodeling or renovation permits which do not result in additional dwelling units. Also excluded from this definition is “Housing for Older Persons” as defined by 46 U.S.C. § 3607, when guaranteed by a restrictive covenant, and new single-family detached units constructed on legal lots created prior to May 1, 1991.

*Development Approval means any written authorization from the County and/or City, which authorizes the commencement of a development activity.

*Director means the Director of the Snohomish County Department of Planning and Development Services (PDS), or the Director’s designee.

District means Lake Stevens School District No. 4.

*District Property Tax Levy Rate (Capital Levy) means the District's current capital property tax rate per thousand dollars of assessed value. For this Capital Facilities Plan, the assumed levy rate is .00152.

*Dwelling Unit Type means (1) single-family residences, (2) multi-family one-bedroom apartment or condominium units (“*small unit*”) and (3) multi-family multiple-bedroom apartment or condominium units (“*large unit*”).

*Encumbered means school impact fees identified by the District to be committed as part of the funding for capital facilities for which the publicly funded share has been assured, development approvals have been sought or construction contracts have been let.

*Estimated Facility Construction Cost means the planned costs of new schools or the actual construction costs of schools of the same grade span recently constructed by the District, including on-site and off-site improvement costs. If the District does not have this cost information available, construction costs of school facilities of the same or similar grade span within another District are acceptable.

*FTE (Full Time Equivalent) is a means of measuring student enrollment based on the number of hours per day in attendance at the District’s schools. A student is considered one FTE if they are enrolled for the equivalent of a full schedule each full day.

*GFA (per student) means the Gross Floor Area per student.

*Grade Span means a category into which the District groups its grades of students (e.g., elementary, middle, mid-high and high school).

Growth Management Act (GMA) - means the Growth Management Act (RCW 36.70A).

*Interest Rate means the current interest rate as stated in the Bond Buyer Twenty Bond General Obligation Bond Index. For this Capital Facilities Plan an assumed rate of 2.45% is used, as provided by Snohomish County. (See also “Capital Bond Rate”)

*Land Cost Per Acre means the estimated average land acquisition cost per acre (in current dollars) based on recent site acquisition costs, comparisons of comparable site acquisition costs in other districts, or the average assessed value per acre of properties comparable to school sites located within the District. In 2022 the District estimates land costs to average \$200,000 per acre.

*Multi-Family Dwelling Unit means any residential dwelling unit that is not a single-family unit as defined by Chapter 30.66C. SCC³

*OFM means Washington State Office of Financial Management.

*OSPI means Washington State Office of the Superintendent of Public Instruction.

*Permanent Facilities means school facilities of the District with a fixed foundation.

*R.C.W. means the Revised Code of Washington (a state law).

*Relocatable Facilities (also referred to as portables) means factory-built structures, transportable in one or more sections, which are designed to be used as an education space and are needed:

- to prevent the overbuilding of school facilities,
- to meet the needs of service areas within the District, or
- to cover the gap between the time that families move into new residential developments and the date that construction is completed on permanent school facilities.

*Relocatable Facilities Cost means the total cost, based on actual costs incurred by the District, for purchasing and installing portable classrooms.

*Relocatable Facilities Student Capacity means the rated capacity for a typical portable classroom used for a specified grade span.

*School Impact Fee means a payment of money imposed upon development as a condition of development approval to pay for school facilities needed to serve the new growth and development. The school impact fee does not include a reasonable permit fee, an application fee, the administrative fee for collecting and handling impact fees, or the cost of reviewing independent fee calculations.

*SEPA means the State Environmental Policy Act (RCW 43.21C).

*Single-Family Dwelling Unit means any detached residential dwelling unit designed for occupancy by a single-family or household.

*Standard of Service means the standard adopted by the District which identifies the program year, the class size by grade span and taking into account the requirements of students with special needs, the number of classrooms, the types of facilities the District believes will best serve its student population and other factors as identified in the District's capital facilities plan. The District's standard of service shall not be adjusted for any portion of the classrooms housed in relocatable facilities that are used as transitional facilities or from any specialized facilities housed in relocatable facilities.

*State Match Percentage means the proportion of funds that are provided to the District for specific capital projects from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the maximum percentage of the total project eligible to be paid by the State.

*Student Factor (Student Generation Rate [SGR]) means the number of students of each grade span (elementary, middle, mid-high and high school) that the District determines are typically generated by different dwelling unit types within the District⁴. Each District will use a survey or statistically valid methodology to derive the specific student generation rate, provided that the survey or methodology is approved by the Snohomish County Council as part of the adopted capital facilities plan for each District. (See Appendix C)

*Subdivision means all small and large lot subdivisions as defined in Section 30.41 of the Snohomish County Code.

*Teaching Station means a facility space (classroom) specifically dedicated to implementing the District's educational program and capable of accommodating at any one time, at least a full class of up to 30 students. In addition to traditional classrooms, these spaces can include computer labs, auditoriums, gymnasiums, music rooms and other special education and resource rooms.

*Unhoused Students means District enrolled students who are housed in portable or temporary classroom space, or in permanent classrooms in which the maximum class size is exceeded.

*WAC means the Washington Administrative Code.

⁴ For purposes of calculating Student Generation Rates, assisted living or senior citizen housing are not included.

SECTION 3: DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables). Educational Program Standards are the same as the minimum level of service as required by Appendix F of the Growth Management Comprehensive Plan.

In addition, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional or special programs such as special education, English as a second language, remediation, alcohol and drug education, preschool and daycare programs, computer labs, music programs, etc. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities.

Examples of special programs offered by the Lake Stevens School District at specific school sites include:

- Behavioral Program
- Bilingual Program
- Career and Technical Education
- Community Education
- Conflict Resolution
- Contract-Based Learning
- Credit Retrieval
- Drug Resistance Education
- Early Learning Center, which includes ECEAP and developmentally delayed preschool
- Highly Capable
- Home School Partnership (HomeLink)
- Language Assistance Program (LAP)
- Life Skills Self-Contained Program
- Multi-Age Instruction
- Multi-tiered Systems of Support
- Occupational and Physical Therapy
- Running Start
- Speech and Language Pathologists
- Structured Learning Center Self-Contained Program
- Summer School
- Title 1
- Title 2

Variations in student capacity between schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space, which can reduce the regular classroom capacity of some of the buildings housing these programs. Some students,

for example, leave their regular classroom for a short period of time to receive instruction in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program requirements will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, state funding levels and use of new technology, as well as other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

In addition, districts are wrestling with the outcomes from the McCleary decision and additional funding and requirements from OSPI and the state Legislature. Many of these outcomes, like full-day kindergarten and reduced class sizes at the elementary level and new graduation requirements at the high school level can have significant impacts to the use of facilities. These will need to be incorporated into the District's facility capacities and uses.

The District's minimum educational program requirements, which directly affect school capacity, are outlined below for the elementary, middle, mid-high and high school grade levels.

Educational Program Standards for Elementary Grades

- Average class size for kindergarten should not exceed **19** students.
- Average class size for grades 1-3 should not exceed **20** students.
- Average class size for grades 4-5 should not exceed **25** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is **12** students.
- All students will be provided music instruction in a separate classroom.
- Students may have a scheduled time in a computer lab.
- Optimum design capacity for new elementary schools is 550 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Educational Program Standards for Middle, Mid-High and High Schools

- Class size for secondary grade (6-12) regular classrooms should not exceed **27** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is 12 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a workspace during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 83% at the high school, mid-high and middle school levels.
- Some Special Education services for students will be provided in a self-contained classroom.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Resource Rooms (i.e., computer labs, study rooms).
 - Special Education Classrooms.
- Program Specific Classrooms:

- Music
- Physical Education
- Drama
- Family and Consumer Sciences
- Art
- Career and Technical Education

Optimum design capacity for new middle schools is 750 students. Optimum design capacity for new high schools is 1,500 students. *Actual* capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Program Standards

The Lake Stevens School District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system.

The Lake Stevens School District has set minimum educational program standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. If there are 25 or fewer students in a majority of K-5 classrooms, the standards have been met; if there are 27 or fewer students in a majority of 6-12 classrooms, the minimum standards have been met. The Lake Stevens School District meets these standards at all grade levels.

Table 3-1 – Minimum Educational Program Standards (MEPS) Met

Grade level	Classrooms above MEPS	Total Classrooms	% Meeting MEPS
Total Elementary	21	194	89%
Total Secondary	30	163	82%
District Total	51	357	86%

It should be noted that the minimum educational program standard is just that, a minimum, and not the desired or accepted operating standard. Also, portables are used to accommodate students within District standards, but are not considered a permanent solution. (See Chapter 4).

SECTION 4: CAPITAL FACILITIES INVENTORY

Capital Facilities

Under GMA, public entities are required to inventory capital facilities used to serve the existing populations. Capital facilities are defined as any structure, improvement, piece of equipment, or other major asset, including land that has a useful life of at least ten years. The purpose of the facilities inventory is to establish a baseline for determining what facilities will be required to accommodate future demand (student enrollment) at acceptable or established levels of service. This section provides an inventory of capital facilities owned and operated by the Lake Stevens School District including schools, portables, developed school sites, undeveloped land and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards (see Section 3). A map showing locations of District school facilities is provided as Figure 1.

Schools

The Lake Stevens School District includes: seven elementary schools grades K-5, two middle schools grades 6-7, one mid-high school grades 8-9, one high school grades 10-12, and an alternative K-8 home school partnership program (HomeLink).

The Office of the Superintendent of Public Instruction (OSPI) calculates school capacity by dividing gross square footage of a building by a standard square footage per student. This method is used by the State as a simple and uniform approach for determining school capacity for purposes of allocating available State Match Funds to school districts for school construction. However, this method is not considered an accurate reflection of the capacity required to accommodate the adopted educational program of each individual district. For this reason, school capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted education program. These capacity calculations were used to establish the District's baseline capacity and determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 4-1.

Table 4-1 – School Capacity Inventory

School Name	Site Size (acres)	Bldg. Area (Sq. Ft.)	Teaching Stations - Regular	Teaching Stations - SPED	Perm. Student Capacity*	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility
Elementary Schools								
Glenwood Elementary	9.0	42,673	22	2	473	598	1992	Yes
Highland Elementary	8.7	49,727	19	4	433	633	1999	Yes
Hillcrest Elementary	15.0	49,735	23		503	753	2008	Yes
Mt. Pilchuck Elementary	22.0	49,833	18	3	407	557	2008	Yes
Skyline Elementary	15.0	42,673	22	2	484	669	1992	Yes
Stevens Creek Elementary	20.0	78,880	26	2	560	560	2018	Yes
Sunnycrest Elementary	15.0	46,970	25		514	614	2009	Yes
Elementary Total	104.7	360,491	155	13	3,374	4,384		
Middle Schools								
Lake Stevens Middle School	25.0	86,374	28	6	647	839	1996	Yes
North Lake Middle School	15.0	90,323	29	5	707	909	2001	Yes
Middle School Total	40.0	176,697	57	11	1,354	1,748		
Mid-High								
Cavelero Mid-High School	37.0	224,694	60	7	1,382	1,382	2007	Yes
Mid-High Total	37.0	224,694	60	7	1,382	1,382		
High Schools								
Lake Stevens High School	38.0	207,195	91	6	2,104	2,104	2021	Yes
High School Total	38.0	207,195	91	6	2,104	2,104		
District Totals	219.7	969,077	363	37	8,214	9,618		

*Note: Student Capacity is exclusive of portables and includes adjustments for special programs.

Leased Facilities

The District does not lease any permanent classrooms.

Relocatable Classrooms (Portables)

Portables are used as interim classroom space to house students until funding can be secured to construct permanent classroom facilities. Portables are not viewed by the District as a solution for housing students on a permanent basis. The Lake Stevens School District currently uses 86 portable classrooms at various school sites throughout the District to provide interim capacity for K-12 students. This compares with 75 portables used in 2020. A typical portable classroom can provide capacity for a full-size class of students. Current use of portables throughout the District is summarized on Table 4-2.

Table 4-2 – Portables

School Name	Portable Classrooms	Capacity in Portables	Remaining Useful Life	Portable Area (ft ²)
<u>ELEMENTARY SCHOOLS</u>				
Glenwood	10	125	Good/excellent	8,960
Highland	8	200	Good	7,168
Hillcrest	21	250	Good/excellent	18,816
Mt. Pilchuck	9	150	Good	8,064
Skyline	11	185	Good/excellent	9,856
Stevens Creek	0	0	NA	0
Sunnycrest	7	100	Good	6,272
Elementary Total	66	1,010		59,136
<u>MIDDLE SCHOOLS</u>				
Lake Stevens Middle	11	192	Good	9,856
North Lake Middle	9	202	Good	8,064
Middle Schools Total	20	394		17,920
<u>MID-HIGH SCHOOL</u>				
Cavelero Mid-High	None	0		0
Mid-High Total	0	0		0
<u>HIGH SCHOOL</u>				
Lake Stevens High School	None	0		0
High School Total	0	0		0
District K-12 Total	86	1,404		77,056

The District will continue to purchase or move existing portables, as needed, to cover the gap between the time that families move into new residential developments and the time the District is able to complete construction on permanent school facilities.

Support Facilities

In addition to schools, the Lake Stevens School District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided in Table 4-3.

Table 4-3 – Support Facilities

Facility	Site Acres	Building Area (sq.ft.)
Education Service Center	1.4	13,700
Grounds	1.0	3,000
Maintenance	1.0	6,391
Transportation	6.0	17,550
Support Facility Total	9.4	40,641

Land Inventory

The Lake Stevens School District owns five undeveloped sites described below:

Ten acres located in the northeast area of the District (Lochsloy area), west of Highway 92. This site will eventually be used for an elementary school (beyond the year 2027). It is presently used as an auxiliary sports field.

An approximately 35-acre site northeast of the intersection of Highway 9 and Soper Hill Road bordered by Lake Drive on the east. This is the site of the district's newest elementary school and early learning center. The remainder of the site is planned for a future middle school.

A parcel of approximately 23 acres located at 20th Street SE and 83rd Street. This property was donated to the School District for an educational facility. The property is encumbered by wetlands and easements, leaving less than 10 available acres. It is planned to be a future elementary school.

A 20 ft. x 200 ft. parcel located on 20th Street SE has been declared surplus by the Lake Stevens School Board and will be used in exchange for dedicated right-of-way for Cavelero Mid-High.

A 2.42-acre site (Jubb Field) located in an area north of Highway #92 is used as a small softball field. It is not of sufficient size to support a school.

Figure 1 – Map of District Facilities

SECTION 5: STUDENT ENROLLMENT TRENDS AND PROJECTIONS

Historic Trends and Projections

Student enrollment in the Lake Stevens School District remained relatively constant between 1973 and 1985 (15%) and then grew significantly from 1985 through 2005 (approximately 120%). Between 2012 and 2021, student enrollment increased by 1,338 students, over 16%. Overall, there was a 2.5% increase countywide during this period, with seven districts losing enrollment. The District has been and is projected to continue to be one of the fastest growing districts in Snohomish County based on the OFM-based population forecast. Population is estimated by the County to rise from 50,461 in 2020 to almost 67,294 in Year 2044, an increase of 33%.

Figure 2 – Lake Stevens School District Enrollment 2012-2021

Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, economic conditions and demographic trends in the area affect the estimates. Monitoring population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projections. Table 5-1 shows enrollment growth from 2012 to 2021 according to OSPI and District records.

Table 5-1 - Enrollment 2011-2019

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Elementary	3,658	3,783	3,917	3,971	4,030	4,083	4,207	4,362	3,998	4,354
Middle	1,307	1,328	1,261	1,314	1,398	1,405	1,414	1,556	1,468	1,426
Mid-High	1,313	1,283	1,318	1,331	1,312	1,344	1,426	1,448	1,476	1,524
High School	1,709	1,732	1,757	1,776	1,871	1,814	1,828	1,834	1,912	2,021
Total	7,987	8,126	8,253	8,392	8,611	8,646	8,875	9,200	8,854	9,325

The District has used either a Ratio Method for its projections or accepted the projections from the State Office of the Superintendent of Public Instruction (OSPI). The Ratio Method (See Appendix C) estimates future enrollments as a percentage of total population, which is tracked for past years, with assumptions being made for what this percentage will be in future years. Between 2010-2021, the average percentage was 18.6%. For future planning, a level rate of 18.5% was used through 2027 and for Year 2044. These assumptions recognize a trend toward lower household sizes offset by significant growth anticipated in the Lake Stevens area. OSPI methodology uses a modified cohort survival method which is explained in Appendix B.

Ratio Method estimates are found in Table 5-2. These have been adopted as part of this Capital Facilities Plan.

Table 5-2 - Projected Enrollment 2022-2027

	2021*	2022	2023	2024	2025	2026	2027
Elementary School	4,354	4,536	4,648	4,737	4,884	5,031	5,007
Middle School	1,426	1,464	1,530	1,563	1,554	1,520	1,681
Mid-High School	1,524	1,506	1,470	1,480	1,543	1,574	1,553
High School	2,021	2,106	2,101	2,107	2,044	2,038	2,060
Total	9,325	9,612	9,750	9,888	10,026	10,164	10,302

*October 2021 Headcount

Figure 3 - Projected Lake Stevens School District Enrollment 2022-2027

In summary, the Ratio Method estimates that headcount enrollment will total 10,302 students in 2027. This represents a 10.5% increase over 2021. The District accepts the Ratio Method estimate for its 2022 CFP planning.

2044 Enrollment Projection

The District projects a 2044 student enrollment of 12,449 based on the Ratio method. (OSPI does not forecast enrollments beyond 2027). The forecast is based on the County's OFM-based population forecast of 67,294 in the District. Although student enrollment projections beyond 2027 are highly speculative, they are useful for developing long-range comprehensive facilities plans. These long-range

enrollment projections may also be used in determining future site acquisition needs.

Table 5-3 - Projected 2044 Enrollment

Grade Span	Projected 2044 FTE Student Enrollment
Elementary (K-5)	5,824
Middle (6-7)	2,017
Mid-High (8-9)	1,984
High (10-12)	2,625
District Total (K-12)	12,449

The 2044 estimate represents a 33.5% increase over 2021 enrollment levels. The total population in the Lake Stevens School District is forecasted to rise by 31%. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle school, mid-high school and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle, mid-high and high school levels.

Again, the 2044 estimates are highly speculative and are used only for general planning purposes. Analysis of future facility and capacity needs is provided in Section 6 of this Capital Facilities Plan.

SECTION 6: CAPITAL FACILITIES PLAN

Existing Deficiencies

Current enrollment at each grade level is identified in Table 5-2. The District currently (2021) has 980 unhoused students at the elementary level, 72 unhoused students at the middle school level and 142 unhoused students at the mid-high level. It has excess capacity high school (83) level.

Facility Needs (2022-2027)

Projected available student capacity was derived by subtracting projected student enrollment from 2021 permanent school capacity (excluding portables) for each of the six years in the forecast period (2022-2027). The District's enrollment projections in Table 5-2 have been applied to the existing capacity (Table 4-1). If no capacity improvements were to be made by the year 2027 the District would be over capacity at the elementary level by 1,633 students, 327 students at the middle school level and 171 students at the mid-high school level.

These projected future capacity needs are depicted on Table 6-1. This table compares actual future space needs with the portion of those needs that are "growth related." RCW 82.02 and Chapter 30.66C SCC mandate that new developments cannot be assessed impact fees to correct existing deficiencies. Thus, any capacity deficiencies existing in the District in 2021 must be deducted from the total projected deficiencies before impact fees are assessed.

Table 6-1 - Projected Additional Capacity Needs 2022 – 2027

Grade Span	2021*	2022	2023	2024	2025	2026	2027
Elementary (K-5)							
Permanent capacity	3,374	3,374	3,374	3,374	3,374	3,374	3,374

Capacity Surplus/(Deficit)	83	(2)	3	(3)	60	66	44
Growth Related		0	0	0	0	0	0
* October 2021 enrollment							

Figures assume no capital improvements.

Forecast of Future Facility Needs through 2044

Additional elementary, middle, mid-high and high school classroom space will need to be constructed between 2022 and 2044 to meet the projected student population increase. The District will have to purchase additional school sites to facilitate growth during this time frame. By the end of the six-year forecast period (2027), additional permanent student capacity will be needed as follows:

Table 6-2 –Additional Capacity Need 2027 & 2044

Grade Level	2022 Capacity	2027 Enrollment	2027 Additional Capacity Needed	2044 Enrollment	2044 Additional Capacity Needed
Elementary	3,374	5,007	1,633	5,824	2,450
Middle School	1,354	1,681	327	2,017	663
Mid-High	1,382	1,553	171	1,984	602
High School	2,104	2,060	0	2,625	521
Total	8,214	10,302	2,132	12,449	4,235

Planned Improvements (2022 - 2027)

The following is a brief outline of those projects likely needed to accommodate unhoused students in the Lake Stevens School District through the Year 2027 based on OSPI enrollment projections.

Elementary Schools: Based upon current enrollment estimates, elementary student population will increase to the level of requiring three new elementary schools. The CFP reflects acquisition of land for two schools and the construction of three elementary schools in 2026 and 2027, although the exact timing is unknown at this time.

Middle Schools: Based upon current enrollment estimates, middle school student population will increase to the level of requiring a new middle school. The CFP reflects the construction of a new middle school in 2027, although the exact timing is unknown at this time.

Interim Classroom Facilities (Portables): Additional portables will be purchased in future years, as needed. However, it remains a District goal to house all students in permanent facilities.

Site Acquisition and Improvements: Two additional elementary school sites will be needed in areas where student growth is taking place. The 10-acre Lochsloy property is in the far corner of the district, not in an area of growth and will not meet this need. Affordable land suitable for school facilities will be difficult to acquire.

Support Facilities

The District has added a satellite pupil transportation lot at Cavelero Mid High to support the growing needs for the district. This is a temporary measure until a site can be acquired and a new, larger pupil transportation center can be built.

Capital Facilities Six-Year Finance Plan

The Six Year Finance Plan shown on Table 6-3 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include bond issue(s), state match funds, school mitigation and impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since the latter are generally not appropriate for impact fee funding. The financing plan and impact fee calculation formula also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.

Table 6-3 – 2022-2027 Capital Facilities Plan

Estimated Project Cost by Year (In \$Millions)	2022	2023	2024	2025	2026	2027	Total	Local Cost*	State Match

*Local Costs include funds currently available, impact fees to be collected and bonds or levies not yet approved.

General Obligation Bonds: Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond. Bonds are then retired through collection of property taxes. A capital improvements bond for \$116,000,000 was approved by the electorate in February 2016. Funds have been used to construct a new elementary school and modernize Lake Stevens High School, as well as fund other non-growth-related projects.

The total costs of the growth-related projects outlined in Table 6-3 represent recent and current bids per information obtained through OSPI, the District's architect and neighboring school districts that have recently or are planning to construct classroom space. An escalation factor of 6% per year has been applied out to 2027.

State Match Funds: State Match Funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominately from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the State Board of Education can establish a moratorium on certain projects.

School districts may qualify for State matching funds for a specific capital project. To qualify, a project must first meet State-established criteria of need. This is determined by a formula that specifies the amount of square footage the State will help finance to house the enrollment projected for the district. If a project qualifies, it can become part of a State prioritization system. This system prioritizes allocation of available funding resources to school districts based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percent of the total project cost to be paid by the State for eligible projects.

State Match Funds can only be applied to major school construction projects. Site acquisition and minor improvements are not eligible to receive matching funds from the State. Because state matching funds are dispersed after a district has paid its local share of the project, matching funds from the State may not be received by a school district until after a school has been constructed. In such cases, the District must "front fund" a project. That is, the District must finance the project with local funds. When the State share is finally disbursed (without accounting for escalation) the future District project is partially reimbursed.

Because of the method of computing state match, the District has historically received approximately 39% of the actual cost of school construction in state matching funds. For its 2022 CFP, the District assumes a 40% match.

School Impact Fees: Development impact fees have been adopted by several jurisdictions as a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time building permits or certificates of occupancy are issued.

Impact fees have been calculated utilizing the formula in Chapter 30.66C SCC. The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase, install or relocate temporary facilities (portables). Credits have also

been applied in the formula to account for state match funds to be reimbursed to the District and projected future property taxes to be paid by the owner of a dwelling unit. The costs of projects that do not add capacity or which address existing deficiencies have been eliminated from the variables used in the calculations. Only capacity improvements are eligible for impact fees.

Shown on Table 6-4, since 2012 the Lake Stevens School District has collected and expended the following impact fees:

Table 6-4 – Impact Fee Revenue and Expenditures

Year	Revenue	Expenditure
2020	\$ 1,604,948	\$ 119,820
2019	\$ 4,483,964	\$ 4,177,428
2018	\$ 1,760,609	\$ 4,076,918
2016	\$ 1,595,840	\$ 1,872,014
2014	\$ 698,188	\$ 1,389,784
2013	\$ 1,005,470	\$ 22,304
2012	\$ 1,526,561	\$ -
Total	\$12,675,580	\$11,658,268

The law allows ten years for collected dollars to be spent.

By ordinance, new developments cannot be assessed impact fees to correct existing deficiencies. Thus, existing capacity deficiencies must be deducted from the total projected deficiencies in the calculation of impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since non-capacity improvements are not eligible for impact fee funding. The financing plan and impact fee calculation also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs (Table 6-1). From this process, the District can develop a plan that can be translated into a bond issue package for submittal to District voters, if deemed appropriate.

Table 6-5 presents an estimate of the capacity impacts of the proposed capital construction projects.

Table 6-5 – Projected Growth-Related Capacity (Deficit) After Programmed Improvements

2021	Elementary	Middle	Mid-High	High School
Existing Capacity	3,374	1,354	1,382	2,104

Projected Enrollment	5,007	1,681	1,553	2,060
Surplus (Deficit) After Improvement	167	423	(171)	44

Impact Fee Calculation Criteria**1. Site Acquisition Cost Element**

Site Size: The site size given the optimum acreage for each school type based on studies of existing school

sites OSPI standards. Generally, districts will require 11-15 acres for an elementary school; 25-30 acres for a middle school or junior high school; and 40 acres or more for a high school. Actual school sites may vary in size depending on the size of parcels available for sale and other site development constraints, such as wetlands. It also varies based on the need for athletic fields adjacent to the school along with other specific planning factors.

This space for site size on the Variable Table contains a number only when the District plans to acquire additional land during the six-year planning period, 2022 - 2027. As noted previously, the District will need to acquire two additional elementary school sites between 2022 and 2027.

Average Land Cost Per Acre: The cost per acre is based on estimates of land costs within the District, based either on recent land purchases or by its knowledge of prevailing costs in the particular real estate market. Prices per acre will vary throughout the County and will be heavily influenced by the urban vs. rural setting of the specific district and the location of the planned school site. The Lake Stevens School District estimates its vacant land costs to be \$200,000 per acre. Until a site is located for acquisition, the actual purchase price is unknown. Developed sites, which sometimes must be acquired adjacent to existing school sites, can cost well over the \$200,000 per acre figure.

Facility Design Capacity (Student FTE): Facility design capacities reflect the District's optimum number of students each school type is designed to accommodate. These figures are based on actual design studies of optimum floor area for new school facilities. The Lake Stevens School District designs new elementary schools to accommodate 600 students, new middle schools 750 students and new high schools 1,500 students.

Student Factor: The student factor (or student generation rate) is the average number of students generated by each housing type – in this case: single-family detached dwellings and multiple-family dwellings. Multiple-family dwellings, which may be rental or owner-occupied units within structures containing two or more dwelling units, were broken out into one-bedroom and two-plus bedroom units. Pursuant to a requirement of Chapter 30.66C SCC, each school district was required to conduct student generation studies within their jurisdictions. A description of this methodology is contained in Appendix C. The Blueline Group performed the analysis. The student generation rates for the Lake Stevens School District are shown on Table 6-6.

Table 6-6 – Student Generation Rates

2022

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.348	0.091	0.090	0.101	0.630
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.092	0.031	0.000	0.023	0.146

2020

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.362	0.116	0.094	0.125	0.697
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.250	0.073	0.094	0.073	0.490

The table also shows the Student Generation rates from the 2020 CFP. For the last three cycles, the

studies showed no records of one-bedroom apartment construction. There has been a gradual decline in student generation rates at all levels and for all housing types.

2. School Construction Cost Variables

Additional Building Capacity: These figures are the actual capacity additions to the Lake Stevens School District that will occur because of improvements listed on Table 6-3 (Capital Facilities Plan).

Current Facility Square Footage: These numbers are taken from Tables 4-1 and 4-2. They are used in combination with the “Existing Portables Square Footage” to apportion the impact fee amounts between permanent and temporary capacity figures in accordance with Chapter 30.66C. SCC.

Estimated Facility Construction Cost: The estimated facility construction cost is based on planned costs or on actual costs of recently constructed schools. The facility cost is the total cost for construction projects as defined on Table 6-3, including only capacity related improvements and adjusted to the “growth related” factor. Projects or portions of projects that address existing deficiencies (which are those students who are un-housed as of October 2021) are not included in the calculation of facility cost for impact fee calculation.

Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extensions, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

3. Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of portables to help relieve capacity deficiencies on a temporary basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent versus temporary space allocations by the district.

Existing Units: This is the total number of existing portables in use by the district as reported on Table 4-2.

New Facilities Required Through 2027: This is the estimated number of portables to be acquired.

Cost Per Unit: This is the average cost to purchase and set up a portable. It includes site preparation but does not include moveable furnishings in the unit.

Relocatable Facilities Cost: This is simply the total number of needed units multiplied by the cost per unit. The number is then adjusted to the “growth-related” factor.

For districts, such as Lake Stevens, which do not credit any portable capacity to the permanent capacity total (see Table 4-1), this number is not directly applicable to the fee calculation and is for information only. The impact fee allows a general fee calculation for portables; however, the amount is adjusted to the proportion of total square footage in portables to the total square footage of permanent and portable space in the district.

4. Fee Credit Variables

Construction Cost Allocation: This number is used by OSPI as a guideline for determining the area cost allowance for new school construction. The index is an average of a seven-city building cost index for commercial and factory buildings in Washington State and is adjusted every year for inflation. The current allocation is \$246.83 (July 2022) up from \$238.22 in 2020.

State Match Percentage: The State match percentage is the proportion of funds that are provided to the school districts, for specific capital projects, from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates the District's assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percentage of the total project to be paid by the State. The District will continue to use a state match percentage of 40%.

5. Tax Credit Variables

Under Chapter 30.66C SCC, a credit is granted to new development to account for taxes that will be paid to the school district over the next ten years. The credit is calculated using a "present value" formula.

Interest Rate (20-year GO Bond): This is the interest rate of return on a 20-year General Obligation Bond and is derived from the bond buyer index. The current assumed interest rate is 2.44%.

Levy Rate (in mils): The Property Tax Levy Rate (for bonds) is determined by dividing the District's average capital property tax rate by one thousand. The current levy rate for the Lake Stevens School District is 0.00152.

Average Assessed Value: This figure is based on the District's average assessed value for each type of dwelling unit (single-family and multiple family). The averaged assessed values are based on estimates made by the County's Planning and Development Services Department utilizing information from the Assessor's files. The current average assessed value for 2022 for single-family detached residential dwellings is \$485,760, up from \$423,231 in 2020 and \$349,255 in 2018); \$169,461 for one-bedroom multi-family unit (\$125,314 in 2020; \$91,988 in 2018), and \$239,226 for two or more bedroom multi-family units (2020: \$178,051; 2018: \$136,499).

6. Adjustments

Growth Related Capacity Percentage: Only the portions of projects addressing new unhoused need are included in the impact fee calculations. The percentage is determined by the number of new unhoused students divided by the number of students for which the project would provide additional capacity.

Fee Discount: In accordance with Chapter 30.66C SCC, all fees calculated using the above factors are to be reduced by 50%.

Table 6-7 - Impact Fee Variables

OSPI Enrollment Forecasting Methodology

OSPI PROJECTION OF ENROLLMENT DATA

Cohort-Survival or Grade-Succession Technique

Development of a long-range school-building program requires a careful forecast of school enrollment indicating the projected number of children who will attend school each year. The following procedures are suggested for determining enrollment projections:

1. Enter in the lower left corner of the rectangle for each year the number of pupils actually enrolled in each grade on October 1, as reported on the October Report of School District Enrollment, Form M-70, column A. (For years prior to October 1, 1965, enter pupils actually enrolled as reported in the county superintendent's annual report, Form A-1.)
2. In order to arrive at enrollment projections for kindergarten and/or grade one pupils, determine the percent that the number of such pupils each year was of the number shown for the immediately preceding year. Compute an average of the percentages, enter it in the column headed "Ave. % of Survival", and apply such average percentage in projecting kindergarten and/or grade one enrollment for the next six years.
3. For grade two and above determine the percent of survival of the enrollment in each grade for each year to the enrollment. In the next lower grade during the preceding year and place this percentage in the upper right corner of the rectangle. (For example, if there were 75 pupils in actual enrollment in grade one on October 1, 1963, and 80 pupils were in actual enrollment in grade two on October 1, 1964, the percent of survival would be $80/75$, or 106.7%. If the actual enrollment on October 1, 1965, in grade three had further increased to 100 pupils, the percent of survival to grade three would be $100/80$ or 125 %.). Compute an average of survival percentages for each year for each grade and enter it in the column, "Ave. % of Survival".
4. In order to determine six-year enrollment projections for grade two and above, multiply the enrollment in the next lower grade during the preceding year by 7 the average percent of survival. For example, if, on October 1 of the last year of record, there were 100 students in grade one and the average percent of survival to grade two was 105, then 105% of 100 would result in a projection of 105 students in grade two on October 1 of the succeeding year.
5. If, after calculating the "Projected Enrollment", there are known factors which will further influence the projections, a statement should be prepared showing the nature of those factors, involved and their anticipated effect upon any portion of the calculated projection.

*Kindergarten students are projected based on a regression line.

OFM Ratio Method – 2044 Enrollment Estimate

Enrollment Forecasts OSPI and OFM Ratio Methods

The Growth Management Act requires that capital facilities plans for schools consider enrollment forecasts that are related to official population forecasts for the district. The OFM ratio method computes past enrollment as a percentage of past population and then estimates how those percentage trends will continue.

Snohomish County prepares the population estimates by distributing official estimates from the Washington Office of Financial Management (OFM) to the school district level. SCC 30.66C requires that these official OFM/County population forecasts be used in the capital facilities plans. Each district is responsible for estimating the assumed percentage of population that, in turn will translate into enrollments.

The District's assumed percentage trends are applied to these County population forecasts. This is known as the Ratio Method. The District then decides to use either it or the six-year forecast (2022-2027) prepared by the State Office of the Superintendent of Public Instructions (OSPI) for use in the facilities plan. Whichever is used for the 2022-2027 planning period, OSPI does not forecast enrollments for Year 2044, so the Ratio Method is used for that purpose, regardless.

Year	Population	Enrollment	Ratio
2010	39,977	7,913	19.79%
2011	41,025	7,985	19.46%
2012	42,074	7,987	18.98%
2013	43,122	8,126	18.84%
2014	44,171	8,253	18.68%
2015	45,219	8,392	18.56%
2016	46,267	8,611	18.61%
2017	47,316	8,646	18.27%
2018	48,364	8,875	18.35%
2019	49,413	9,200	18.62%
2020	50,461	8,854	17.55%
2021	51,208	9,325	18.21%
2022	51,954	9,612	18.50%
2023	52,701	9,750	18.50%
2024	53,447	9,888	18.50%
2025	54,194	10,026	18.50%
2026	54,940	10,164	18.50%
2027	55,687	10,302	18.50%
2044	67,294	12,449	18.50%

The table above shows actual enrollments and population estimates from 2010-2021, and their resulting ratio (the 2010 and 2020 population totals are official census figures).

Until 2015 the trend was a declining ratio of students to population. The ratio leveled off in years 2016 through 2019. In 2020, school closures and online learning caused enrollment to drop. Then enrollment rebounded in 2021 and returned to pre-pandemic levels. The district projects that the ratio will level off for the projection period and average around 18.5%.

2044 Enrollment Estimate

The District's 2022 CFP ratio of 18.50% is used for the 2044 enrollment estimate. Using that number against the County's 2044 population estimate of 67,294 produces a projected enrollment number of 12,449 students in 2044.

STUDENT GENERATION RATE REPROT

This report shows the estimated number of students for each grade that is typically generated by different dwelling unit types within the Lake Stevens School District (LSSD). These student generation rates (SGRs) assist in predicting future enrollment for the short-term and long-term planning horizons as development and redevelopment change the mix of housing types in the district. SGRs are also used in the school impact fee formula to determine the per dwelling unit cost of needed new school capacity.

This document describes the methodology used to calculate SGRs for the LSSD and provides the findings of those calculations. SGRs were calculated for two types of residential construction: single-family detached and multifamily. Manufactured homes are included in the single-family detached classification. Single-family attached units such as condominiums, townhomes, and multiplexes are included in the multifamily classification.

Electronic records were pulled from the Snohomish County Assessor’s FTP Data Downloads webpage. The specific dataset titled *Improvement Records* was filtered to only contain residential development data from the past 5 years (2017 – 2021). This table was brought into ArcGIS. Using a shapefile of the LSSD boundary, all the records attached to parcels located within LSSD were selected, creating a new LSSD-specific table. The table was divided by single-family versus multifamily development. Then the multifamily list was divided by number of bedrooms, where all units containing 1 bedroom or less are grouped and units containing 2 or more bedrooms are grouped. No multifamily units containing 1 bedroom or less were found in this data. Also, no developments containing more units than a duplex (two units) were found in this data.

The School District provided Blueline with student records data including the addresses and grade levels of all P2-12 students attending the Lake Stevens School District as of January 2022. This data containing 9,877 students was reformatted so the addresses matched the style of the LSSD Improvement Records address data.

There were 1,989 records indicating construction of new single-family detached units. These were cross-referenced and matched with the student records data, and the matches were tallied by grade level. The same was done for the 130 multifamily (2+ bedroom) records. The tables displaying the results are shown on the following page.

	SINGLE-FAMILY	MULTIFAMILY (0-1 BR)	MULTIFAMILY (2+ BR)	TOTAL
UNITS CONSTRUCTED IN LSSD (2017 - 2021)	1,989	0	130	2,119
NUMBER OF STUDENTS ATTENDING LAKE STEVENS SCHOOL DISTRICT	9,877

**RESOLUTION NO. 9-22
ADOPTION OF 2022-2027
CAPITAL FACILITIES PLAN**

WHEREAS, the Lake Stevens School District is required by RCW 36.70 (the Growth Management Act) and the Snohomish County General Policy Plan to adopt a Capital Facilities Plan; and

WHEREAS, development of the Capital Facilities Plan was carried out by the District in accordance with accepted methodologies and requirements of the Growth Management Act; and

WHEREAS, impact fee calculations are consistent with methodologies meeting the conditions and tests of RCW 82.02 and Snohomish County Code; and

WHEREAS, the District finds that the methodologies accurately assess necessary additional capacity which address only growth-related needs; and

WHEREAS, a draft of the Plan was submitted to Snohomish County for review with changes having been made in accordance with County comments; and

WHEREAS, the District finds that the Plan meets the basic requirements of RCW 36.70A and RCW 82.02; and

WHEREAS, a review of the Plan was carried out pursuant to RCW 43.21C (the State Environmental Policy Act). A Determination of Non Significance has been issued.

NOW, THEREFORE, BE IT RESOLVED that the Board of Directors of the Lake Stevens School District hereby adopts the Capital Facilities Plan for the years 2022-2027, pursuant to the requirements of RCW 36.70A and the Snohomish County General Policy Plan. The Snohomish County Council, the City of Lake Stevens and the City of Marysville are hereby requested to adopt the Plan as an element of their general policy plans and companion ordinances.

ADOPTED by the Board of Directors of the Lake Stevens School District No. 4, Snohomish County, state of Washington, at a regular meeting thereof held this 10th day of August 2022,

**LAKE STEVENS SCHOOL DISTRICT NO. 4
BOARD OF DIRECTORS**

President

ATTEST:

Superintendent:

Our students will be contributing members of society and lifelong learners, pursuing their passions and interests in an ever-changing world.

Appendix F

Determination of Nonsignificance

DETERMINATION OF NONSIGNIFICANCE

Lake Stevens School District No. 4 Capital Facilities Plan 2022-2027

DESCRIPTION OF PROPOSAL: The proposed action is the adoption of the Lake Stevens School District No. 4 Capital Facilities Plan, 2022-2027. Board adoption is scheduled to occur on August 10, 2022. This Capital Facilities Plan has been developed in accordance with requirements of the State Growth Management Act and is a non-project proposal. It documents how the Lake Stevens School District utilizes its existing educational facilities given current district enrollment configurations and educational program standards and uses six-year enrollment projections to quantify capital facility needs for years 2022-2027.

PROPONENT: Lake Stevens School District No. 4

LOCATION OF PROPOSAL: Lake Stevens School District No. 4
Snohomish County, Washington

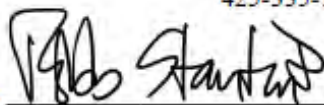

LEAD AGENCY: Lake Stevens School District No. 4

The lead agency for this proposal has determined that the proposal does not have a probable significant adverse impact on the environment. An environmental impact statement (EIS) is not required under RCW 43.21C.030(2)(c). This decision was made after review of an environmental checklist and other information on file with the lead agency. This information is available to the public upon request.

This Determination of Nonsignificance (DNS) is issued under WAC 197-11-340(2). The lead agency will not act on this proposal for 14 days from the published date below. Comments may be submitted to the Responsible Official as named below.

RESPONSIBLE OFFICIAL: Robb Stanton
POSITION/TITLE: Executive Director, Operations
ADDRESS: Lake Stevens School District No. 4
12309 22nd Street NE
Lake Stevens, WA 98258
PHONE: 425-335-1506

SIGNATURE:

PUBLISHED: The Everett Herald – July 14, 2022

There is no administrative agency appeal.

Appendix G
Snohomish County General Policy Plan -- Appendix F

Appendix F

REVIEW CRITERIA FOR SCHOOL DISTRICT CAPITAL FACILITY PLANS

Required Plan Contents

1. Future Enrollment Forecasts by Grade Span, including:
 - a 6-year forecast (or more) to support the financing program;
 - a description of the forecasting methodology and justification for its consistency with OFM population forecasts used in the county's comprehensive plan.
2. Inventory of Existing Facilities, including:
 - the location and capacity of existing schools;
 - a description of educational standards and a clearly defined minimum level of service such as classroom size, school size, use of portables, etc.;
 - the location and description of all district-owned or leased sites (if any) and properties;
 - a description of support facilities, such as administrative centers, transportation and maintenance yards and facilities, etc.; and
 - information on portables, including numbers, locations, remaining useful life (as appropriate to educational standards), etc.
3. Forecast of Future Facility Needs, including:
 - identification of new schools and/or school additions needed to address existing deficiencies and to meet demands of projected growth over the next 6 years; and
 - the number of additional portable classrooms needed.
4. Forecast of Future Site Needs, including:
 - the number, size, and general location of needed new school sites.
5. Financing Program (6-year minimum Planning Horizon)
 - estimated cost of specific construction and site acquisition and development projects proposed to address growth-related needs;
 - projected schedule for completion of these projects; and
 - proposed sources of funding, including impact fees (if proposed), local bond issues (both approved and proposed), and state matching funds.
6. Impact Fee Support Data (where applicable), including:
 - an explanation of the calculation methodology, including description of key variables and their computation;
 - definitions and sources of data for all inputs into the fee calculation, indicating that it:
 - a) is accurate and reliable and that any sample data is statistically valid;
 - b) accurately reflects projected costs in the 6-year financing program; and
 - a proposed fee schedule that reflects expected student generation rates from, at minimum, the following residential unit types: single-family, multifamily/studio or 1-bedroom, and multi-family/2-bedroom or more.

Plan Performance Criteria

1. School facility plans must meet the basic requirements set down in RCW 36.70A (the Growth Management Act). Districts proposing to use impact fees as a part of their financing program must also meet the requirements of RCW 82.02.
2. Where proposed, impact fees must utilize a calculation methodology that meets the conditions and tests of RCW 82.02.
3. Enrollment forecasts should utilize established methods and should produce results which are not inconsistent with the OFM population forecasts used in the county comprehensive plan. Each plan should also demonstrate that it is consistent with the 20-year forecast in the land use element of the county's comprehensive plan.
4. The financing plan should separate projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
5. Plans should use best-available information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. District-generated data may be used if it is derived through statistically reliable methodologies.
6. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources in the event that impact fees are not available due to action by the state, county or the cities within their district boundaries.
7. Repealed effective January 2, 2000.

Plan Review Procedures

1. District capital facility plan updates should be submitted to the County Planning and Development Services Department for review prior to formal adoption by the school district.
2. Each school district planning to expand its school capacity must submit to the county an updated capital facilities plan at least every 2 years. Proposed increases in impact fees must be submitted as part of an update to the capital facilities plan, and will be considered no more frequently than once a year.
3. Each school district will be responsible for conducting any required SEPA reviews on its capital facilities plan prior to its adoption, in accordance with state statutes and regulations.
4. School district capital facility plans and plan updates must be submitted no later than 180 calendar days prior to their desired effective date.
5. District plans and plan updates must include a resolution or motion from the district school board adopting the plan before it will become effective.

Appendix G: Snohomish County General Policy Plan -- Appendix F

SECTION 1: INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington Growth Management Act (GMA) outlines thirteen broad goals including adequate provision of necessary public facilities and services. Schools are among these necessary facilities and services. The public school districts serving Snohomish County residents have developed capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

This Capital Facilities Plan (CFP) is intended to provide the Lake Stevens School District (District), Snohomish County, the City of Lake Stevens, the City of Marysville and other jurisdictions a description of facilities needed to accommodate projected student enrollment at acceptable levels of service over the next twenty-two years (2044), with a more detailed schedule and financing program for capital improvements over the next six years (2022-2027). This CFP is based in large measure on the 2015 Facilities Master Plan for the Lake Stevens School District.

When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan¹. This part of the plan establishes the criteria for all future updates of the District CFP, which is to occur every two years. This CFP updates the GMA-based Capital Facilities Plan last adopted by the District in 2020.

In accordance with GMA mandates and Chapter 30.66C SCC, this CFP contains the following required elements:

Element	See Page	Table
Future enrollment forecasts for each grade span (elementary, middle, mid-high and high).	17	5-2
An inventory of existing capital facilities owned by the District, showing the locations and student capacities of the facilities.	12	4-1
A forecast of the future needs for capital facilities and school sites; distinguishing between existing and projected deficiencies.	19 20	6-1 6-2
The proposed capacities of expanded or new capital facilities.	25	6-3

¹ See Appendix F of this CFP

Element	See Page	Table
A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.	22	6-3
A calculation of impact fees to be assessed and support data substantiating said fees.	Appendix A	
A report on fees collected through December 2021 and how those funds were used.	24	6-4

In developing this CFP, the guidelines of Appendix F of the General Policy Plan² were used as follows:

- Information was obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information is to be consistent with the State Office of Financial Management (OFM) population forecasts and those of Snohomish County.
- Chapter 30.66C SCC requires that student generation rates be independently calculated by each school district. Rates were updated for this CFP by The Blueline Group (See Appendix C).
- The CFP complies with RCW 36.70A (the Growth Management Act) and, where impact fees are to be assessed, RCW 82.02.
- The calculation methodology for impact fees meets the conditions and test of RCW 82.02. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources if impact fees are not available due to action by the state, county or the cities within their district boundaries.

Adoption of this CFP by reference by the County and cities of Marysville and Lake Stevens constitutes approval of the methodology used herein by those entities.

Overview of the Lake Stevens School District

The Lake Stevens School District is located six miles east of downtown Everett and encompasses most of the City of Lake Stevens as well as portions of unincorporated Snohomish County and a small portion of the City of Marysville. The District is located south of the Marysville School District and north of the Snohomish School District.

The District currently serves a student population of 9,256³ with seven elementary schools, two middle schools, one mid-high school, one high school and one homeschool partnership program (HomeLink).

² See Appendix G of this CFP

³ April 2022 Headcount Report

Elementary schools provide educational programs for students in kindergarten through grade five. Middle schools serve grades six and seven, the mid-high serves grades eight and nine and the high school serves grades ten through twelve. HomeLink provides programs for students from kindergarten through eighth grade. The District employs 616 certificated staff members and 606 classified staff for a total of 1,222.

Significant Issues Related to Facility Planning in the Lake Stevens School District

The most significant issues facing the Lake Stevens School District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Continued housing growth in the District.
- The need to have unhoused students before becoming eligible for state construction funding.
- The implementation of reduced class sizes at the K-3 level at all elementary schools.
- Uneven distribution of growth across the district and an imbalance in growth in the north and south ends of the district, requiring facilities to balance enrollment.
- Increased critical areas regulations, decreasing the amount of developable area on school sites.
- Discounted school impact fees and changes to how and when these fees are calculated and paid, none of which supports mitigating the true impact of development.
- The need for additional property and lack of suitable sites within Urban Growth Area (UGA) boundaries to accommodate school facilities.
- The elimination of the ability to develop schools outside of UGAs.
- The inability to add temporary capacity with portable classrooms on school sites without costly stormwater and infrastructure improvements.
- Aging school facilities.
- Projected permanent capacity shortfall by 2027 for K-5 of 1,633 students (with no improvements).

These issues are addressed in greater detail in this Capital Facilities Plan.

SECTION 2: DEFINITIONS

Note: Definitions of terms preceded by an asterisk (*) are provided in Chapter 30.9SCC. They are included here, in some cases with further clarification to aid in the understanding of this CFP. Any such clarifications provided herein in no way affect the legal definitions and meanings assigned to them in Chapter 30.9 SCC.

*Appendix F means Appendix F of the Snohomish County Growth Management Act (GMA) Comprehensive Plan, also referred to as the General Policy Plan (GPP).

*Average Assessed Value average assessed value by dwelling unit type for all residential units constructed within the district. These figures are provided by Snohomish County. The current average assessed value for 2022 is \$485,760 for single-family detached residential dwellings; \$169,461 for one-bedroom (*Small*) multi-family units, and \$239,226 for two or more bedroom (*Large*) multi-family units.

*Boeckh Index (See Construction Cost Allocation)

*Board means the Board of Directors of the Lake Stevens School District (“School Board”).

Capital Bond Rate means the annual percentage rate computed against capital (construction) bonds issued by the District. for 2022, a rate of 2.45% is used. (See also “Interest Rate”)

*Capital Facilities means school facilities identified in the District’s capital facilities plan that are “system improvements” as defined by the GMA as opposed to localized “project improvements.”

*Capital Facilities Plan (CFP) means the District’s facilities plan adopted by its school board consisting of those elements required by Chapter 30.66C SCC and meeting the requirements of the GMA and Appendix F of the General Policy Plan. The definition refers to *this* document, which is consistent with the adopted “2015 Facilities Plan for the Lake Stevens School District,” which is a separate document. Construction Cost Allocation (formerly the Boeckh Index) means a factor used by OSPI as a guideline for determining the area cost allowance for new school construction. The Index for the 2022 Capital Facilities Plan is \$246.83, as provided by Snohomish County.

*City means City of Lake Stevens and/or City of Marysville.

*Council means the Snohomish County Council and/or the Lake Stevens or Marysville City Council.

*County means Snohomish County.

*Commerce means the Washington State Department of Commerce.

*Developer means the proponent of a development activity, such as any person or entity that owns or holds purchase options or other development control over property for which development activity is proposed.

*Development means all subdivisions, short subdivisions, conditional use or special use permits, binding site plan approvals, rezones accompanied by an official site plan, or building permits (including building permits for multi-family and duplex residential structures, and all similar uses) and other applications requiring land use permits or approval by Snohomish County, the City of Lake Stevens and/or City of Marysville.

*Development Activity means any residential construction or expansion of a building, structure or use of land or any other change of building, structure or land that creates additional demand and need for school facilities but excluding building permits for attached or detached accessory apartments, and remodeling or renovation permits which do not result in additional dwelling units. Also excluded from this definition is “Housing for Older Persons” as defined by 46 U.S.C. § 3607, when guaranteed by a restrictive covenant, and new single-family detached units constructed on legal lots created prior to May 1, 1991.

*Development Approval means any written authorization from the County and/or City, which authorizes the commencement of a development activity.

*Director means the Director of the Snohomish County Department of Planning and Development Services (PDS), or the Director’s designee.

District means Lake Stevens School District No. 4.

*District Property Tax Levy Rate (Capital Levy) means the District's current capital property tax rate per thousand dollars of assessed value. For this Capital Facilities Plan, the assumed levy rate is .00152.

*Dwelling Unit Type means (1) single-family residences, (2) multi-family one-bedroom apartment or condominium units (“*small unit*”) and (3) multi-family multiple-bedroom apartment or condominium units (“*large unit*”).

*Encumbered means school impact fees identified by the District to be committed as part of the funding for capital facilities for which the publicly funded share has been assured, development approvals have been sought or construction contracts have been let.

*Estimated Facility Construction Cost means the planned costs of new schools or the actual construction costs of schools of the same grade span recently constructed by the District, including on-site and off-site improvement costs. If the District does not have this cost information available, construction costs of school facilities of the same or similar grade span within another District are acceptable.

*FTE (Full Time Equivalent) is a means of measuring student enrollment based on the number of hours per day in attendance at the District’s schools. A student is considered one FTE if they are enrolled for the equivalent of a full schedule each full day.

*GFA (per student) means the Gross Floor Area per student.

*Grade Span means a category into which the District groups its grades of students (e.g., elementary, middle, mid-high and high school).

Growth Management Act (GMA) - means the Growth Management Act (RCW 36.70A).

*Interest Rate means the current interest rate as stated in the Bond Buyer Twenty Bond General Obligation Bond Index. For this Capital Facilities Plan an assumed rate of 2.45% is used, as provided by Snohomish County. (See also “Capital Bond Rate”)

*Land Cost Per Acre means the estimated average land acquisition cost per acre (in current dollars) based on recent site acquisition costs, comparisons of comparable site acquisition costs in other districts, or the average assessed value per acre of properties comparable to school sites located within the District. In 2022 the District estimates land costs to average \$200,000 per acre.

*Multi-Family Dwelling Unit means any residential dwelling unit that is not a single-family unit as defined by Chapter 30.66C. SCC³

*OFM means Washington State Office of Financial Management.

*OSPI means Washington State Office of the Superintendent of Public Instruction.

*Permanent Facilities means school facilities of the District with a fixed foundation.

*R.C.W. means the Revised Code of Washington (a state law).

*Relocatable Facilities (also referred to as portables) means factory-built structures, transportable in one or more sections, which are designed to be used as an education space and are needed:

- to prevent the overbuilding of school facilities,
- to meet the needs of service areas within the District, or
- to cover the gap between the time that families move into new residential developments and the date that construction is completed on permanent school facilities.

*Relocatable Facilities Cost means the total cost, based on actual costs incurred by the District, for purchasing and installing portable classrooms.

*Relocatable Facilities Student Capacity means the rated capacity for a typical portable classroom used for a specified grade span.

*School Impact Fee means a payment of money imposed upon development as a condition of development approval to pay for school facilities needed to serve the new growth and development. The school impact fee does not include a reasonable permit fee, an application fee, the administrative fee for collecting and handling impact fees, or the cost of reviewing independent fee calculations.

*SEPA means the State Environmental Policy Act (RCW 43.21C).

*Single-Family Dwelling Unit means any detached residential dwelling unit designed for occupancy by a single-family or household.

*Standard of Service means the standard adopted by the District which identifies the program year, the class size by grade span and taking into account the requirements of students with special needs, the number of classrooms, the types of facilities the District believes will best serve its student population and other factors as identified in the District's capital facilities plan. The District's standard of service shall not be adjusted for any portion of the classrooms housed in relocatable facilities that are used as transitional facilities or from any specialized facilities housed in relocatable facilities.

*State Match Percentage means the proportion of funds that are provided to the District for specific capital projects from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the maximum percentage of the total project eligible to be paid by the State.

*Student Factor (Student Generation Rate [SGR]) means the number of students of each grade span (elementary, middle, mid-high and high school) that the District determines are typically generated by different dwelling unit types within the District⁴. Each District will use a survey or statistically valid methodology to derive the specific student generation rate, provided that the survey or methodology is approved by the Snohomish County Council as part of the adopted capital facilities plan for each District. (See Appendix C)

*Subdivision means all small and large lot subdivisions as defined in Section 30.41 of the Snohomish County Code.

*Teaching Station means a facility space (classroom) specifically dedicated to implementing the District's educational program and capable of accommodating at any one time, at least a full class of up to 30 students. In addition to traditional classrooms, these spaces can include computer labs, auditoriums, gymnasiums, music rooms and other special education and resource rooms.

*Unhoused Students means District enrolled students who are housed in portable or temporary classroom space, or in permanent classrooms in which the maximum class size is exceeded.

*WAC means the Washington Administrative Code.

⁴ For purposes of calculating Student Generation Rates, assisted living or senior citizen housing are not included.

SECTION 3: DISTRICT EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables). Educational Program Standards are the same as the minimum level of service as required by Appendix F of the Growth Management Comprehensive Plan.

In addition, government mandates and community expectations may affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by nontraditional or special programs such as special education, English as a second language, remediation, alcohol and drug education, preschool and daycare programs, computer labs, music programs, etc. These special or nontraditional educational programs can have a significant impact on the available student capacity of school facilities.

Examples of special programs offered by the Lake Stevens School District at specific school sites include:

- Behavioral Program
- Bilingual Program
- Career and Technical Education
- Community Education
- Conflict Resolution
- Contract-Based Learning
- Credit Retrieval
- Drug Resistance Education
- Early Learning Center, which includes ECEAP and developmentally delayed preschool
- Highly Capable
- Home School Partnership (HomeLink)
- Language Assistance Program (LAP)
- Life Skills Self-Contained Program
- Multi-Age Instruction
- Multi-tiered Systems of Support
- Occupational and Physical Therapy
- Running Start
- Speech and Language Pathologists
- Structured Learning Center Self-Contained Program
- Summer School
- Title 1
- Title 2

Variations in student capacity between schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space, which can reduce the regular classroom capacity of some of the buildings housing these programs. Some students,

for example, leave their regular classroom for a short period of time to receive instruction in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program requirements will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, state funding levels and use of new technology, as well as other physical aspects of the school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

In addition, districts are wrestling with the outcomes from the McCleary decision and additional funding and requirements from OSPI and the state Legislature. Many of these outcomes, like full-day kindergarten and reduced class sizes at the elementary level and new graduation requirements at the high school level can have significant impacts to the use of facilities. These will need to be incorporated into the District's facility capacities and uses.

The District's minimum educational program requirements, which directly affect school capacity, are outlined below for the elementary, middle, mid-high and high school grade levels.

Educational Program Standards for Elementary Grades

- Average class size for kindergarten should not exceed **19** students.
- Average class size for grades 1-3 should not exceed **20** students.
- Average class size for grades 4-5 should not exceed **25** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is **12** students.
- All students will be provided music instruction in a separate classroom.
- Students may have a scheduled time in a computer lab.
- Optimum design capacity for new elementary schools is 550 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

Educational Program Standards for Middle, Mid-High and High Schools

- Class size for secondary grade (6-12) regular classrooms should not exceed **27** students.
- Special Education for students may be provided in a self-contained classroom. The practical capacity for these classrooms is 12 students.
- As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a workspace during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 83% at the high school, mid-high and middle school levels.
- Some Special Education services for students will be provided in a self-contained classroom.
- Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows:
 - Resource Rooms (i.e., computer labs, study rooms).
 - Special Education Classrooms.
- Program Specific Classrooms:

- Music
- Physical Education
- Drama
- Family and Consumer Sciences
- Art
- Career and Technical Education

Optimum design capacity for new middle schools is 750 students. Optimum design capacity for new high schools is 1,500 students. *Actual* capacity of individual schools may vary depending on the educational programs offered.

Minimum Educational Program Standards

The Lake Stevens School District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system.

The Lake Stevens School District has set minimum educational program standards based on several criteria. Exceeding these minimum standards will trigger significant changes in program delivery. If there are 25 or fewer students in a majority of K-5 classrooms, the standards have been met; if there are 27 or fewer students in a majority of 6-12 classrooms, the minimum standards have been met. The Lake Stevens School District meets these standards at all grade levels.

Table 3-1 – Minimum Educational Program Standards (MEPS) Met

Grade level	Classrooms above MEPS	Total Classrooms	% Meeting MEPS
Total Elementary	21	194	89%
Total Secondary	30	163	82%
District Total	51	357	86%

It should be noted that the minimum educational program standard is just that, a minimum, and not the desired or accepted operating standard. Also, portables are used to accommodate students within District standards, but are not considered a permanent solution. (See Chapter 4).

SECTION 4: CAPITAL FACILITIES INVENTORY

Capital Facilities

Under GMA, public entities are required to inventory capital facilities used to serve the existing populations. Capital facilities are defined as any structure, improvement, piece of equipment, or other major asset, including land that has a useful life of at least ten years. The purpose of the facilities inventory is to establish a baseline for determining what facilities will be required to accommodate future demand (student enrollment) at acceptable or established levels of service. This section provides an inventory of capital facilities owned and operated by the Lake Stevens School District including schools, portables, developed school sites, undeveloped land and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards (see Section 3). A map showing locations of District school facilities is provided as Figure 1.

Schools

The Lake Stevens School District includes: seven elementary schools grades K-5, two middle schools grades 6-7, one mid-high school grades 8-9, one high school grades 10-12, and an alternative K-8 home school partnership program (HomeLink).

The Office of the Superintendent of Public Instruction (OSPI) calculates school capacity by dividing gross square footage of a building by a standard square footage per student. This method is used by the State as a simple and uniform approach for determining school capacity for purposes of allocating available State Match Funds to school districts for school construction. However, this method is not considered an accurate reflection of the capacity required to accommodate the adopted educational program of each individual district. For this reason, school capacity was determined based on the number of teaching stations within each building and the space requirements of the District's adopted education program. These capacity calculations were used to establish the District's baseline capacity and determine future capacity needs based on projected student enrollment. The school capacity inventory is summarized in Table 4-1.

Table 4-1 – School Capacity Inventory

School Name	Site Size (acres)	Bldg. Area (Sq. Ft.)	Teaching Stations - Regular	Teaching Stations - SPED	Perm. Student Capacity*	Capacity with Portables	Year Built or Last Remodel	Potential for Expansion of Perm. Facility
Elementary Schools								
Glenwood Elementary	9.0	42,673	22	2	473	598	1992	Yes

Mt. Pilchuck Elementary	22.0	49,833	18	3	407	557	2008	Yes
Skyline Elementary	15.0	42,673	22	2	484	669	1992	Yes
Stevens Creek Elementary	20.0	78,880	26	2	560	560	2018	Yes
Sunnycrest Elementary	15.0	46,970	25		514	614	2009	Yes
Elementary Total	104.7	360,491	155	13	3,374	4,384		
Middle Schools								
Lake Stevens Middle School	25.0	86,374	28	6	647	839	1996	Yes
North Lake Middle School	15.0	90,323	29	5	707	909	2001	Yes
Middle School Total	40.0	176,697	57	11	1,354	1,748		
Mid-High								
Cavelero Mid-High School	37.0	224,694	60	7	1,382	1,382	2007	Yes
Mid-High Total	37.0	224,694	60	7	1,382	1,382		
High Schools								
Lake Stevens High School	38.0	207,195	91	6	2,104	2,104	2021	Yes
High School Total	38.0	207,195	91	6	2,104	2,104		
District Totals	219.7	969,077	363	37	8,214	9,618		

*Note: Student Capacity is exclusive of portables and includes adjustments for special programs.

Leased Facilities

The District does not lease any permanent classrooms.

Relocatable Classrooms (Portables)

Portables are used as interim classroom space to house students until funding can be secured to construct permanent classroom facilities. Portables are not viewed by the District as a solution for housing students on a permanent basis. The Lake Stevens School District currently uses 86 portable classrooms at various school sites throughout the District to provide interim capacity for K-12 students. This compares with 75 portables used in 2020. A typical portable classroom can provide capacity for a full-size class of students. Current use of portables throughout the District is summarized on Table 4-2.

Table 4-2 – Portables

School Name	Portable Classrooms	Capacity in Portables	Remaining Useful Life	Portable Area (ft ²)
<u>ELEMENTARY SCHOOLS</u>				
Glenwood	10	125	Good/excellent	8,960
Highland	8	200	Good	7,168
Hillcrest	21	250	Good/excellent	18,816
Mt. Pilchuck	9	150	Good	8,064
Skyline	11	185	Good/excellent	9,856
Stevens Creek	0	0	NA	0
Sunnycrest	7	100	Good	6,272
Elementary Total	66	1,010		59,136
<u>MIDDLE SCHOOLS</u>				
Lake Stevens Middle	11	192	Good	9,856
North Lake Middle	9	202	Good	8,064
Middle Schools Total	20	394		17,920
<u>MID-HIGH SCHOOL</u>				
Cavelero Mid-High	None	0		0
Mid-High Total	0	0		0
<u>HIGH SCHOOL</u>				
Lake Stevens High School	None	0		0
High School Total	0	0		0
District K-12 Total	86	1,404		77,056

The District will continue to purchase or move existing portables, as needed, to cover the gap between the time that families move into new residential developments and the time the District is able to complete construction on permanent school facilities.

Support Facilities

In addition to schools, the Lake Stevens School District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided in Table 4-3.

Table 4-3 – Support Facilities

Facility	Site Acres	Building Area (sq.ft.)
Education Service Center	1.4	13,700
Grounds	1.0	3,000
Maintenance	1.0	6,391
Transportation	6.0	17,550
Support Facility Total	9.4	40,641

Land Inventory

The Lake Stevens School District owns five undeveloped sites described below:

Ten acres located in the northeast area of the District (Lochsloy area), west of Highway 92. This site will eventually be used for an elementary school (beyond the year 2027). It is presently used as an auxiliary sports field.

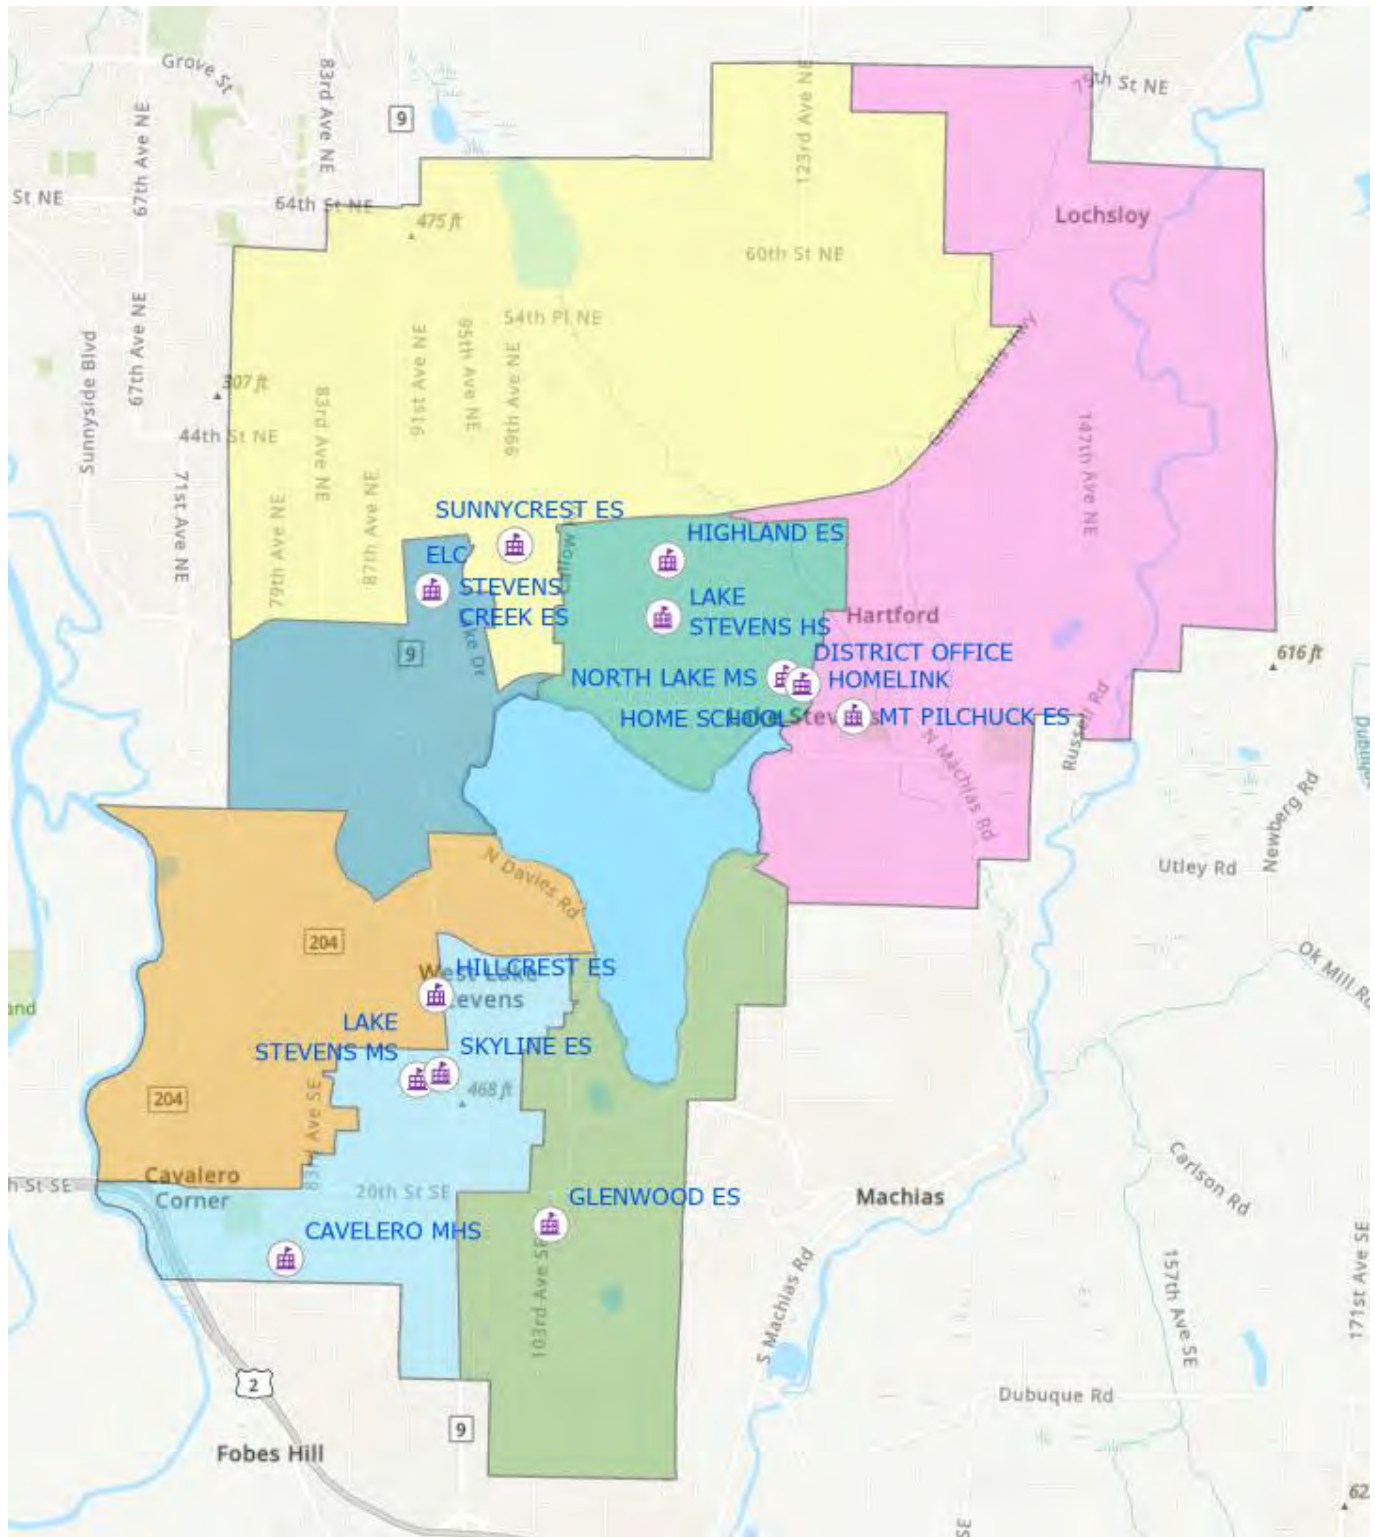

An approximately 35-acre site northeast of the intersection of Highway 9 and Soper Hill Road bordered by Lake Drive on the east. This is the site of the district's newest elementary school and early learning center. The remainder of the site is planned for a future middle school.

A parcel of approximately 23 acres located at 20th Street SE and 83rd Street. This property was donated to the School District for an educational facility. The property is encumbered by wetlands and easements, leaving less than 10 available acres. It is planned to be a future elementary school.

A 20 ft. x 200 ft. parcel located on 20th Street SE has been declared surplus by the Lake Stevens School Board and will be used in exchange for dedicated right-of-way for Cavelero Mid-High.

A 2.42-acre site (Jubb Field) located in an area north of Highway #92 is used as a small softball field. It is not of sufficient size to support a school.

Figure 1 – Map of District Facilities

SECTION 5: STUDENT ENROLLMENT TRENDS AND PROJECTIONS

Historic Trends and Projections

Student enrollment in the Lake Stevens School District remained relatively constant between 1973 and 1985 (15%) and then grew significantly from 1985 through 2005 (approximately 120%). Between 2012 and 2021, student enrollment increased by 1,338 students, over 16%. Overall, there was a 2.5% increase countywide during this period, with seven districts losing enrollment. The District has been and is projected to continue to be one of the fastest growing districts in Snohomish County based on the OFM-based population forecast. Population is estimated by the County to rise from 50,461 in 2020 to almost 67,294 in Year 2044, an increase of 33%.

Figure 2 – Lake Stevens School District Enrollment 2012-2021

Enrollment projections are most accurate for the initial years of the forecast period. Moving further into the future, economic conditions and demographic trends in the area affect the estimates. Monitoring population growth for the area are essential yearly activities in the ongoing management of the capital facilities plan. In the event enrollment growth slows, plans for new facilities can be delayed. It is much more difficult, however, to initiate new projects or speed projects up in the event enrollment growth exceeds the projections. Table 5-1 shows enrollment growth from 2012 to 2021 according to OSPI and District records.

Table 5-1 - Enrollment 2011-2019

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Elementary	3,658	3,783	3,917	3,971	4,030	4,083	4,207	4,362	3,998	4,354
Middle	1,307	1,328	1,261	1,314	1,398	1,405	1,414	1,556	1,468	1,426
Mid-High	1,313	1,283	1,318	1,331	1,312	1,344	1,426	1,448	1,476	1,524
High School	1,709	1,732	1,757	1,776	1,871	1,814	1,828	1,834	1,912	2,021
Total	7,987	8,126	8,253	8,392	8,611	8,646	8,875	9,200	8,854	9,325

The District has used either a Ratio Method for its projections or accepted the projections from the State Office of the Superintendent of Public Instruction (OSPI). The Ratio Method (See Appendix C) estimates future enrollments as a percentage of total population, which is tracked for past years, with assumptions being made for what this percentage will be in future years. Between 2010-2021, the average percentage was 18.6%. For future planning, a level rate of 18.5% was used through 2027 and for Year 2044. These assumptions recognize a trend toward lower household sizes offset by significant growth anticipated in the Lake Stevens area. OSPI methodology uses a modified cohort survival method which is explained in Appendix B.

Ratio Method estimates are found in Table 5-2. These have been adopted as part of this Capital Facilities Plan.

Table 5-2 - Projected Enrollment 2022-2027

	2021*	2022	2023	2024	2025	2026	2027
Elementary School	4,354	4,536	4,648	4,737	4,884	5,031	5,007
Middle School	1,426	1,464	1,530	1,563	1,554	1,520	1,681
Mid-High School	1,524	1,506	1,470	1,480	1,543	1,574	1,553
High School	2,021	2,106	2,101	2,107	2,044	2,038	2,060
Total	9,325	9,612	9,750	9,888	10,026	10,164	10,302

*October 2021 Headcount

Figure 3 - Projected Lake Stevens School District Enrollment 2022-2027

In summary, the Ratio Method estimates that headcount enrollment will total 10,302 students in 2027. This represents a 10.5% increase over 2021. The District accepts the Ratio Method estimate for its 2022 CFP planning.

2044 Enrollment Projection

The District projects a 2044 student enrollment of 12,449 based on the Ratio method. (OSPI does not forecast enrollments beyond 2027). The forecast is based on the County's OFM-based population forecast of 67,294 in the District. Although student enrollment projections beyond 2027 are highly speculative, they are useful for developing long-range comprehensive facilities plans. These long-range

enrollment projections may also be used in determining future site acquisition needs.

Table 5-3 - Projected 2044 Enrollment

Grade Span	Projected 2044 FTE Student Enrollment
Elementary (K-5)	5,824
Middle (6-7)	2,017
Mid-High (8-9)	1,984
High (10-12)	2,625
District Total (K-12)	12,449

The 2044 estimate represents a 33.5% increase over 2021 enrollment levels. The total population in the Lake Stevens School District is forecasted to rise by 31%. The total enrollment estimate was broken down by grade span to evaluate long-term site acquisition needs for elementary, middle school, mid-high school and high school facilities. Enrollment by grade span was determined based on recent and projected enrollment trends at the elementary, middle, mid-high and high school levels.

Again, the 2044 estimates are highly speculative and are used only for general planning purposes. Analysis of future facility and capacity needs is provided in Section 6 of this Capital Facilities Plan.

SECTION 6: CAPITAL FACILITIES PLAN

Existing Deficiencies

Current enrollment at each grade level is identified in Table 5-2. The District currently (2021) has 980 unhoused students at the elementary level, 72 unhoused students at the middle school level and 142 unhoused students at the mid-high level. It has excess capacity high school (83) level.

Facility Needs (2022-2027)

Projected available student capacity was derived by subtracting projected student enrollment from 2021 permanent school capacity (excluding portables) for each of the six years in the forecast period (2022-2027). The District's enrollment projections in Table 5-2 have been applied to the existing capacity (Table 4-1). If no capacity improvements were to be made by the year 2027 the District would be over capacity at the elementary level by 1,633 students, 327 students at the middle school level and 171 students at the mid-high school level.

These projected future capacity needs are depicted on Table 6-1. This table compares actual future space needs with the portion of those needs that are "growth related." RCW 82.02 and Chapter 30.66C SCC mandate that new developments cannot be assessed impact fees to correct existing deficiencies. Thus, any capacity deficiencies existing in the District in 2021 must be deducted from the total projected deficiencies before impact fees are assessed.

Table 6-1 - Projected Additional Capacity Needs 2022 – 2027

Grade Span	2021*	2022	2023	2024	2025	2026	2027
Elementary (K-5)							
Permanent capacity	3,374	3,374	3,374	3,374	3,374	3,374	3,374
Enrollment	4,354	4,535	4,648	4,737	4,884	5,031	5,007
Capacity Surplus/(Deficit)	(980)	(1,161)	(1,274)	(1,363)	(1,510)	(1,657)	(1,633)
Growth Related		(181)	(294)	(383)	(530)	(677)	(653)
Middle School (6-7)							
Permanent capacity	1,354	1,354	1,354	1,354	1,354	1,354	1,354
Enrollment	1,426	1,464	1,530	1,563	1,553	1,520	1,681

Enrollment	2,021	2,106	2,101	2,107	2,044	2,038	2,060
Capacity Surplus/(Deficit)	83	(2)	3	(3)	60	66	44
Growth Related		0	0	0	0	0	0
* October 2021 enrollment							

Figures assume no capital improvements.

Forecast of Future Facility Needs through 2044

Additional elementary, middle, mid-high and high school classroom space will need to be constructed between 2022 and 2044 to meet the projected student population increase. The District will have to purchase additional school sites to facilitate growth during this time frame. By the end of the six-year forecast period (2027), additional permanent student capacity will be needed as follows:

Table 6-2 –Additional Capacity Need 2027 & 2044

Grade Level	2022 Capacity	2027 Enrollment	2027 Additional Capacity Needed	2044 Enrollment	2044 Additional Capacity Needed
Elementary	3,374	5,007	1,633	5,824	2,450
Middle School	1,354	1,681	327	2,017	663
Mid-High	1,382	1,553	171	1,984	602
High School	2,104	2,060	0	2,625	521
Total	8,214	10,302	2,132	12,449	4,235

Planned Improvements (2022 - 2027)

The following is a brief outline of those projects likely needed to accommodate unhoused students in the Lake Stevens School District through the Year 2027 based on OSPI enrollment projections.

Elementary Schools: Based upon current enrollment estimates, elementary student population will increase to the level of requiring three new elementary schools. The CFP reflects acquisition of land for two schools and the construction of three elementary schools in 2026 and 2027, although the exact timing is unknown at this time.

Middle Schools: Based upon current enrollment estimates, middle school student population will increase to the level of requiring a new middle school. The CFP reflects the construction of a new middle school in 2027, although the exact timing is unknown at this time.

Interim Classroom Facilities (Portables): Additional portables will be purchased in future years, as needed. However, it remains a District goal to house all students in permanent facilities.

Site Acquisition and Improvements: Two additional elementary school sites will be needed in areas where student growth is taking place. The 10-acre Lochsloy property is in the far corner of the district, not in an area of growth and will not meet this need. Affordable land suitable for school facilities will be difficult to acquire.

Support Facilities

The District has added a satellite pupil transportation lot at Cavelero Mid High to support the growing needs for the district. This is a temporary measure until a site can be acquired and a new, larger pupil transportation center can be built.

Capital Facilities Six-Year Finance Plan

The Six Year Finance Plan shown on Table 6-3 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include bond issue(s), state match funds, school mitigation and impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since the latter are generally not appropriate for impact fee funding. The financing plan and impact fee calculation formula also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.

Table 6-3 – 2022-2027 Capital Facilities Plan

Estimated Project Cost by Year (In \$Millions)	2022	2023	2024	2025	2026	2027	Total	Local Cost*	State Match

*Local Costs include funds currently available, impact fees to be collected and bonds or levies not yet approved.

General Obligation Bonds: Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to pass a bond. Bonds are then retired through collection of property taxes. A capital improvements bond for \$116,000,000 was approved by the electorate in February 2016. Funds have been used to construct a new elementary school and modernize Lake Stevens High School, as well as fund other non-growth-related projects.

The total costs of the growth-related projects outlined in Table 6-3 represent recent and current bids per information obtained through OSPI, the District's architect and neighboring school districts that have recently or are planning to construct classroom space. An escalation factor of 6% per year has been applied out to 2027.

State Match Funds: State Match Funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund then retired from revenues accruing predominately from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the State Board of Education can establish a moratorium on certain projects.

School districts may qualify for State matching funds for a specific capital project. To qualify, a project must first meet State-established criteria of need. This is determined by a formula that specifies the amount of square footage the State will help finance to house the enrollment projected for the district. If a project qualifies, it can become part of a State prioritization system. This system prioritizes allocation of available funding resources to school districts based on a formula which calculates district assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percent of the total project cost to be paid by the State for eligible projects.

State Match Funds can only be applied to major school construction projects. Site acquisition and minor improvements are not eligible to receive matching funds from the State. Because state matching funds are dispersed after a district has paid its local share of the project, matching funds from the State may not be received by a school district until after a school has been constructed. In such cases, the District must "front fund" a project. That is, the District must finance the project with local funds. When the State share is finally disbursed (without accounting for escalation) the future District project is partially reimbursed.

Because of the method of computing state match, the District has historically received approximately 39% of the actual cost of school construction in state matching funds. For its 2022 CFP, the District assumes a 40% match.

School Impact Fees: Development impact fees have been adopted by several jurisdictions as a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time building permits or certificates of occupancy are issued.

Impact fees have been calculated utilizing the formula in Chapter 30.66C SCC. The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase, install or relocate temporary facilities (portables). Credits have also

been applied in the formula to account for state match funds to be reimbursed to the District and projected future property taxes to be paid by the owner of a dwelling unit. The costs of projects that do not add capacity or which address existing deficiencies have been eliminated from the variables used in the calculations. Only capacity improvements are eligible for impact fees.

Shown on Table 6-4, since 2012 the Lake Stevens School District has collected and expended the following impact fees:

Table 6-4 – Impact Fee Revenue and Expenditures

Year	Revenue	Expenditure
2020	\$ 1,604,948	\$ 119,820
2019	\$ 4,483,964	\$ 4,177,428
2018	\$ 1,760,609	\$ 4,076,918
2016	\$ 1,595,840	\$ 1,872,014
2014	\$ 698,188	\$ 1,389,784
2013	\$ 1,005,470	\$ 22,304
2012	\$ 1,526,561	\$ -
Total	\$12,675,580	\$11,658,268

The law allows ten years for collected dollars to be spent.

By ordinance, new developments cannot be assessed impact fees to correct existing deficiencies. Thus, existing capacity deficiencies must be deducted from the total projected deficiencies in the calculation of impact fees.

The financing plan separates projects and portions of projects that add capacity from those that do not, since non-capacity improvements are not eligible for impact fee funding. The financing plan and impact fee calculation also differentiate between projects or portions of projects that address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs (Table 6-1). From this process, the District can develop a plan that can be translated into a bond issue package for submittal to District voters, if deemed appropriate.

Table 6-5 presents an estimate of the capacity impacts of the proposed capital construction projects.

Table 6-5 – Projected Growth-Related Capacity (Deficit) After Programmed Improvements

2021	Elementary	Middle	Mid-High	High School

Surplus (Deficit) After Improvement	167	423	(171)	44

Impact Fee Calculation Criteria**1. Site Acquisition Cost Element**

Site Size: The site size given the optimum acreage for each school type based on studies of existing school

sites OSPI standards. Generally, districts will require 11-15 acres for an elementary school; 25-30 acres for a middle school or junior high school; and 40 acres or more for a high school. Actual school sites may vary in size depending on the size of parcels available for sale and other site development constraints, such as wetlands. It also varies based on the need for athletic fields adjacent to the school along with other specific planning factors.

This space for site size on the Variable Table contains a number only when the District plans to acquire additional land during the six-year planning period, 2022 - 2027. As noted previously, the District will need to acquire two additional elementary school sites between 2022 and 2027.

Average Land Cost Per Acre: The cost per acre is based on estimates of land costs within the District, based either on recent land purchases or by its knowledge of prevailing costs in the particular real estate market. Prices per acre will vary throughout the County and will be heavily influenced by the urban vs. rural setting of the specific district and the location of the planned school site. The Lake Stevens School District estimates its vacant land costs to be \$200,000 per acre. Until a site is located for acquisition, the actual purchase price is unknown. Developed sites, which sometimes must be acquired adjacent to existing school sites, can cost well over the \$200,000 per acre figure.

Facility Design Capacity (Student FTE): Facility design capacities reflect the District's optimum number of students each school type is designed to accommodate. These figures are based on actual design studies of optimum floor area for new school facilities. The Lake Stevens School District designs new elementary schools to accommodate 600 students, new middle schools 750 students and new high schools 1,500 students.

Student Factor: The student factor (or student generation rate) is the average number of students generated by each housing type – in this case: single-family detached dwellings and multiple-family dwellings. Multiple-family dwellings, which may be rental or owner-occupied units within structures containing two or more dwelling units, were broken out into one-bedroom and two-plus bedroom units. Pursuant to a requirement of Chapter 30.66C SCC, each school district was required to conduct student generation studies within their jurisdictions. A description of this methodology is contained in Appendix C. The Blueline Group performed the analysis. The student generation rates for the Lake Stevens School District are shown on Table 6-6.

Table 6-6 – Student Generation Rates

2022

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.348	0.091	0.090	0.101	0.630
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.092	0.031	0.000	0.023	0.146

2020

Student Generation Rates	Elementary	Middle	Mid-High	High	Total
Single Family	0.362	0.116	0.094	0.125	0.697
Multiple Family, 1 Bedroom	No data	No data	No data	No data	No data
Multiple Family, 2+ Bedroom	0.250	0.073	0.094	0.073	0.490

The table also shows the Student Generation rates from the 2020 CFP. For the last three cycles, the

studies showed no records of one-bedroom apartment construction. There has been a gradual decline in student generation rates at all levels and for all housing types.

2. School Construction Cost Variables

Additional Building Capacity: These figures are the actual capacity additions to the Lake Stevens School District that will occur because of improvements listed on Table 6-3 (Capital Facilities Plan).

Current Facility Square Footage: These numbers are taken from Tables 4-1 and 4-2. They are used in combination with the “Existing Portables Square Footage” to apportion the impact fee amounts between permanent and temporary capacity figures in accordance with Chapter 30.66C. SCC.

Estimated Facility Construction Cost: The estimated facility construction cost is based on planned costs or on actual costs of recently constructed schools. The facility cost is the total cost for construction projects as defined on Table 6-3, including only capacity related improvements and adjusted to the “growth related” factor. Projects or portions of projects that address existing deficiencies (which are those students who are un-housed as of October 2021) are not included in the calculation of facility cost for impact fee calculation.

Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extensions, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

3. Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of portables to help relieve capacity deficiencies on a temporary basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent versus temporary space allocations by the district.

Existing Units: This is the total number of existing portables in use by the district as reported on Table 4-2.

New Facilities Required Through 2027: This is the estimated number of portables to be acquired.

Cost Per Unit: This is the average cost to purchase and set up a portable. It includes site preparation but does not include moveable furnishings in the unit.

Relocatable Facilities Cost: This is simply the total number of needed units multiplied by the cost per unit. The number is then adjusted to the “growth-related” factor.

For districts, such as Lake Stevens, which do not credit any portable capacity to the permanent capacity total (see Table 4-1), this number is not directly applicable to the fee calculation and is for information only. The impact fee allows a general fee calculation for portables; however, the amount is adjusted to the proportion of total square footage in portables to the total square footage of permanent and portable space in the district.

4. Fee Credit Variables

Construction Cost Allocation: This number is used by OSPI as a guideline for determining the area cost allowance for new school construction. The index is an average of a seven-city building cost index for commercial and factory buildings in Washington State and is adjusted every year for inflation. The current allocation is \$246.83 (July 2022) up from \$238.22 in 2020.

State Match Percentage: The State match percentage is the proportion of funds that are provided to the school districts, for specific capital projects, from the State's Common School Construction Fund. These funds are disbursed based on a formula which calculates the District's assessed valuation per pupil relative to the whole State assessed valuation per pupil to establish the percentage of the total project to be paid by the State. The District will continue to use a state match percentage of 40%.

5. Tax Credit Variables

Under Chapter 30.66C SCC, a credit is granted to new development to account for taxes that will be paid to the school district over the next ten years. The credit is calculated using a "present value" formula.

Interest Rate (20-year GO Bond): This is the interest rate of return on a 20-year General Obligation Bond and is derived from the bond buyer index. The current assumed interest rate is 2.44%.

Levy Rate (in mils): The Property Tax Levy Rate (for bonds) is determined by dividing the District's average capital property tax rate by one thousand. The current levy rate for the Lake Stevens School District is 0.00152.

Average Assessed Value: This figure is based on the District's average assessed value for each type of dwelling unit (single-family and multiple family). The averaged assessed values are based on estimates made by the County's Planning and Development Services Department utilizing information from the Assessor's files. The current average assessed value for 2022 for single-family detached residential dwellings is \$485,760, up from \$423,231 in 2020 and \$349,255 in 2018); \$169,461 for one-bedroom multi-family unit (\$125,314 in 2020; \$91,988 in 2018), and \$239,226 for two or more bedroom multi-family units (2020: \$178,051; 2018: \$136,499).

6. Adjustments

Growth Related Capacity Percentage: Only the portions of projects addressing new unhoused need are included in the impact fee calculations. The percentage is determined by the number of new unhoused students divided by the number of students for which the project would provide additional capacity.

Fee Discount: In accordance with Chapter 30.66C SCC, all fees calculated using the above factors are to be reduced by 50%.

Table 6-7 - Impact Fee Variables

Criteria	Elementary	Middle	Mid-High	High
Growth-Related Capacity Deficiencies	653	255	29	0
Discount (Snohomish County, Lake Stevens and Marysville)	50%	50%	50%	50%

OSPI Enrollment Forecasting Methodology

OSPI PROJECTION OF ENROLLMENT DATA

Cohort-Survival or Grade-Succession Technique

Development of a long-range school-building program requires a careful forecast of school enrollment indicating the projected number of children who will attend school each year. The following procedures are suggested for determining enrollment projections:

1. Enter in the lower left corner of the rectangle for each year the number of pupils actually enrolled in each grade on October 1, as reported on the October Report of School District Enrollment, Form M-70, column A. (For years prior to October 1, 1965, enter pupils actually enrolled as reported in the county superintendent's annual report, Form A-1.)
2. In order to arrive at enrollment projections for kindergarten and/or grade one pupils, determine the percent that the number of such pupils each year was of the number shown for the immediately preceding year. Compute an average of the percentages, enter it in the column headed "Ave. % of Survival", and apply such average percentage in projecting kindergarten and/or grade one enrollment for the next six years.
3. For grade two and above determine the percent of survival of the enrollment in each grade for each year to the enrollment in the next lower grade during the preceding year and place this percentage in the upper right corner of the rectangle. (For example, if there were 75 pupils in actual enrollment in grade one on October 1, 1963, and 80 pupils were in actual enrollment in grade two on October 1, 1964, the percent of survival would be $80/75$, or 106.7%. If the actual enrollment on October 1, 1965, in grade three had further increased to 100 pupils, the percent of survival to grade three would be $100/80$ or 125 %.). Compute an average of survival percentages for each year for each grade and enter it in the column, "Ave. % of Survival".
4. In order to determine six-year enrollment projections for grade two and above, multiply the enrollment in the next lower grade during the preceding year by 7 the average percent of survival. For example, if, on October 1 of the last year of record, there were 100 students in grade one and the average percent of survival to grade two was 105, then 105% of 100 would result in a projection of 105 students in grade two on October 1 of the succeeding year.
5. If, after calculating the "Projected Enrollment", there are known factors which will further influence the projections, a statement should be prepared showing the nature of those factors, involved and their anticipated effect upon any portion of the calculated projection.

*Kindergarten students are projected based on a regression line.

Appendix C

OFM Ratio Method – 2044 Enrollment Estimate

Enrollment Forecasts OSPI and OFM Ratio Methods

The Growth Management Act requires that capital facilities plans for schools consider enrollment forecasts that are related to official population forecasts for the district. The OFM ratio method computes past enrollment as a percentage of past population and then estimates how those percentage trends will continue.

Snohomish County prepares the population estimates by distributing official estimates from the Washington Office of Financial Management (OFM) to the school district level. SCC 30.66C requires that these official OFM/County population forecasts be used in the capital facilities plans. Each district is responsible for estimating the assumed percentage of population that, in turn will translate into enrollments.

The District's assumed percentage trends are applied to these County population forecasts. This is known as the Ratio Method. The District then decides to use either it or the six-year forecast (2022-2027) prepared by the State Office of the Superintendent of Public Instructions (OSPI) for use in the facilities plan. Whichever is used for the 2022-2027 planning period, OSPI does not forecast enrollments for Year 2044, so the Ratio Method is used for that purpose, regardless.

Year	Population	Enrollment	Ratio
2010	39,977	7,913	19.79%
2011	41,025	7,985	19.46%
2012	42,074	7,987	18.98%
2013	43,122	8,126	18.84%
2014	44,171	8,253	18.68%
2015	45,219	8,392	18.56%
2016	46,267	8,611	18.61%
2017	47,316	8,646	18.27%
2018	48,364	8,875	18.35%
2019	49,413	9,200	18.62%
2020	50,461	8,854	17.55%
2021	51,208	9,325	18.21%
2022	51,954	9,612	18.50%
2023	52,701	9,750	18.50%
2024	53,447	9,888	18.50%
2025	54,194	10,026	18.50%
2026	54,940	10,164	18.50%
2027	55,687	10,302	18.50%
2044	67,294	12,449	18.50%

The table above shows actual enrollments and population estimates from 2010-2021, and their resulting ratio (the 2010 and 2020 population totals are official census figures).

Until 2015 the trend was a declining ratio of students to population. The ratio leveled off in years 2016 through 2019. In 2020, school closures and online learning caused enrollment to drop. Then enrollment rebounded in 2021 and returned to pre-pandemic levels. The district projects that the ratio will level off for the projection period and average around 18.5%.

2044 Enrollment Estimate

The District's 2022 CFP ratio of 18.50% is used for the 2044 enrollment estimate. Using that number against the County's 2044 population estimate of 67,294 produces a projected enrollment number of 12,449 students in 2044.

STUDENT GENERATION RATE REPROT

This report shows the estimated number of students for each grade that is typically generated by different dwelling unit types within the Lake Stevens School District (LSSD). These student generation rates (SGRs) assist in predicting future enrollment for the short-term and long-term planning horizons as development and redevelopment change the mix of housing types in the district. SGRs are also used in the school impact fee formula to determine the per dwelling unit cost of needed new school capacity.

This document describes the methodology used to calculate SGRs for the LSSD and provides the findings of those calculations. SGRs were calculated for two types of residential construction: single-family detached and multifamily. Manufactured homes are included in the single-family detached classification. Single-family attached units such as condominiums, townhomes, and multiplexes are included in the multifamily classification.

Electronic records were pulled from the Snohomish County Assessor’s FTP Data Downloads webpage. The specific dataset titled *Improvement Records* was filtered to only contain residential development data from the past 5 years (2017 – 2021). This table was brought into ArcGIS. Using a shapefile of the LSSD boundary, all the records attached to parcels located within LSSD were selected, creating a new LSSD-specific table. The table was divided by single-family versus multifamily development. Then the multifamily list was divided by number of bedrooms, where all units containing 1 bedroom or less are grouped and units containing 2 or more bedrooms are grouped. No multifamily units containing 1 bedroom or less were found in this data. Also, no developments containing more units than a duplex (two units) were found in this data.

The School District provided Blueline with student records data including the addresses and grade levels of all P2-12 students attending the Lake Stevens School District as of January 2022. This data containing 9,877 students was reformatted so the addresses matched the style of the LSSD Improvement Records address data.

There were 1,989 records indicating construction of new single-family detached units. These were cross-referenced and matched with the student records data, and the matches were tallied by grade level. The same was done for the 130 multifamily (2+ bedroom) records. The tables displaying the results are shown on the following page.

	SINGLE-FAMILY	MULTIFAMILY (0-1 BR)	MULTIFAMILY (2+ BR)	TOTAL
UNITS CONSTRUCTED IN LSSD (2017 - 2021)	1,989	0	130	2,119

REVIEW CRITERIA FOR SCHOOL DISTRICT CAPITAL FACILITY PLANS

Required Plan Contents

1. Future Enrollment Forecasts by Grade Span, including:
 - a 6-year forecast (or more) to support the financing program;
 - a description of the forecasting methodology and justification for its consistency with OFM population forecasts used in the county's comprehensive plan.
2. Inventory of Existing Facilities, including:
 - the location and capacity of existing schools;
 - a description of educational standards and a clearly defined minimum level of service such as classroom size, school size, use of portables, etc.;
 - the location and description of all district-owned or leased sites (if any) and properties;
 - a description of support facilities, such as administrative centers, transportation and maintenance yards and facilities, etc.; and
 - information on portables, including numbers, locations, remaining useful life (as appropriate to educational standards), etc.
3. Forecast of Future Facility Needs, including:
 - identification of new schools and/or school additions needed to address existing deficiencies and to meet demands of projected growth over the next 6 years; and
 - the number of additional portable classrooms needed.
4. Forecast of Future Site Needs, including:
 - the number, size, and general location of needed new school sites.
5. Financing Program (6-year minimum Planning Horizon)
 - estimated cost of specific construction and site acquisition and development projects proposed to address growth-related needs;
 - projected schedule for completion of these projects; and
 - proposed sources of funding, including impact fees (if proposed), local bond issues (both approved and proposed), and state matching funds.
6. Impact Fee Support Data (where applicable), including:
 - an explanation of the calculation methodology, including description of key variables and their computation;
 - definitions and sources of data for all inputs into the fee calculation, indicating that it:
 - a) is accurate and reliable and that any sample data is statistically valid;
 - b) accurately reflects projected costs in the 6-year financing program; and
 - a proposed fee schedule that reflects expected student generation rates from, at minimum, the following residential unit types: single-family, multifamily/studio or 1-bedroom, and multi-family/2-bedroom or more.

Plan Performance Criteria

1. School facility plans must meet the basic requirements set down in RCW 36.70A (the Growth Management Act). Districts proposing to use impact fees as a part of their financing program must also meet the requirements of RCW 82.02.
2. Where proposed, impact fees must utilize a calculation methodology that meets the conditions and tests of RCW 82.02.
3. Enrollment forecasts should utilize established methods and should produce results which are not inconsistent with the OFM population forecasts used in the county comprehensive plan. Each plan should also demonstrate that it is consistent with the 20-year forecast in the land use element of the county's comprehensive plan.
4. The financing plan should separate projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding. The financing plan and/or the impact fee calculation formula must also differentiate between projects or portions of projects which address existing deficiencies (ineligible for impact fees) and those which address future growth-related needs.
5. Plans should use best-available information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. District-generated data may be used if it is derived through statistically reliable methodologies.
6. Districts which propose the use of impact fees should identify in future plan updates alternative funding sources in the event that impact fees are not available due to action by the state, county or the cities within their district boundaries.
7. Repealed effective January 2, 2000.

Plan Review Procedures

1. District capital facility plan updates should be submitted to the County Planning and Development Services Department for review prior to formal adoption by the school district.
2. Each school district planning to expand its school capacity must submit to the county an updated capital facilities plan at least every 2 years. Proposed increases in impact fees must be submitted as part of an update to the capital facilities plan, and will be considered no more frequently than once a year.
3. Each school district will be responsible for conducting any required SEPA reviews on its capital facilities plan prior to its adoption, in accordance with state statutes and regulations.
4. School district capital facility plans and plan updates must be submitted no later than 180 calendar days prior to their desired effective date.
5. District plans and plan updates must include a resolution or motion from the district school board adopting the plan before it will become effective.

MUKILTEO SCHOOL DISTRICT NO. 6

CAPITAL FACILITIES PLAN 2022 – 2027

SECTION 1 - INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (GMA) outlines 13 broad goals including the adequate provision of necessary public facilities and services. Public Schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Mukilteo School District (District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act and the codes of Snohomish County, City of Mukilteo, and City of Everett. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period, 2022-2027.

The District prepared its original CFP in 1994 based on the criteria set forth in the GMA. When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan. Appendix F established the criteria for future updates of the District's CFP.

In accordance with the Growth Management Act and the Snohomish County School Impact Fee Ordinance, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites. The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities which identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the guidelines set forth in Appendix F of the General Policy Plan:

- Information must be obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must be consistent with Office of Financial Management (OFM) population trends. Student generation rates must be independently calculated by each school district.
- The CFP must comply with RCW Chapter 36.70A (the Growth Management Act).
- The methodology used to calculate impact fees must comply with RCW Chapter 82.02. In the event that impact fees are not available due to action by the state, county, or cities within the District, future CFP's would identify alternative funding sources.

When the County adopted its School Impact Fee Ordinance in November 1997, it established the specific criteria for the adoption of a CFP and the assessment of impact fees in the County. Section 3

of the ordinance defines the requirements for the biennial CFP updates. Table 1 of the ordinance outlines the formulae for determination of impact fees.

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Overview of the Mukilteo School District

Twenty-six square miles in area, the Mukilteo School District encompasses the City of Mukilteo, portions of the City of Everett, and portions of unincorporated Snohomish County. The District is bordered on the north and east by the Everett School District and by the Edmonds School District to the south.

The District serves a student population of 14,581 (October 2021) with one kindergarten center, twelve elementary schools (grades K-5), four middle schools (grades 6-8), two comprehensive high schools (grades 9-12), and one small choice high school (grades 10-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Sno-Isle Skills Center is not included as the Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes.

The most significant issues facing the District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Capacity needs during the six-year period of the plan at the elementary and high school grade spans.
- Uneven growth rates between geographic sectors within the District. These uneven growth patterns result in some schools reaching maximum capacity sooner than others and this will increase the difficulty of maintaining stable school service area boundaries.
- Uncertainty of growth rates for new housing development and enrollment given the unprecedented nature of the pandemic and its current impacts on construction. While the District experienced a pandemic-related enrollment decline, future projections still show growth and Snohomish County's Comprehensive Plan continues to identify large population growth in the coming years with high concentrations in the Mukilteo School District boundary areas.

SECTION 2 - DISTRICT EDUCATIONAL PROGRAM STANDARDS

Primary Objective

To best optimize student learning, Mukilteo School District establishes a service standard for classroom capacity utilization. This requires a constant review and assessment of curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Additional variables include changes in mandatory requirements issued by the state such as the implementation of full day kindergarten, Core 24 graduation requirements, and required reduction in class size ratios. These elements as well as demographic projections are weighed when determining service levels. School facility and student capacity needs are determined by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables). These elements, as well as demographic projections, are weighed when determining standard of service levels.

In addition to student population, other factors such as collective bargaining agreements, government mandates and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music/performing arts programs. These programs can have a significant impact on the available student capacity of school facilities.

District Educational Program Standards.

Special programs offered by the District at specific school sites include, but are not limited to:

Advanced Placement (high school)	Library/Media Centers
Special Education (resource or specialized)	Speech Language Pathologists
Special Education (early childhood)	Performing Arts
Summer School	Health & Fitness
Highly Capable Program (grades 3-8)	Science Labs
English as a Second Language (ESL)	OT/PT
English Language Learner (ELL)	Career Centers (High School)
World Languages	Student Stores (High School)
Community-Based Transition Program	Learning Assistance Programs (LAP)
ECEAP	Mukilteo Behavioral Support Center
Music Programs	Career and Technical Education
Computer & Technology Labs	College in the High School
Title 1 Support	Opportunity Day School

The above programs affect the capacity of some of the buildings housing these programs. Special programs usually require space modifications and frequently require lower class sizes than other, more traditional programs; this affects available school capacity as it results in greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year (as programs move or grow, depending on space needs, capacity can increase or decline in a school).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates and needs for special programs or use of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational

program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The educational program standards that directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards for Elementary Schools

- Planning class size for Kindergarten through 3rd grade is 21 students per classroom
- Class size for Kindergarten through third grade cannot exceed 25 students
- Planning class size grades 4 and 5 is 23 students per classroom
- Class size for grades 4 and 5 cannot exceed 26 students
- Special Education for some students is provided in self-contained classrooms of 8-12 students per classroom
- Music and physical education instruction will be provided in a separate classroom
- Schools should have a room dedicated as a computer lab
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%

Educational Program Planning Standards for Middle and High Schools

- Planning class size for middle school grades is 25 students per teacher
- Class size for middle school grades 6 through 8 cannot exceed 30 students
- Planning class size for high school grades is 27 students per teacher
- Class size for high school grades 9 through 12 cannot exceed 33 students
- The ACES high school program limits capacity to 200 students
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%
- Identified students will also be provided other programs in classrooms designated as computer labs, resource rooms and other program specific classrooms (i.e., music, drama, art, family and consumer science, special education, career and technical education and English Language Learner).

Minimum Level of Service

Planning class sizes are used to determine school capacities, they are not a measure of the District's minimum level of service. The minimum level of service is defined as the maximum level of enrollment the District can accommodate at any given time. The minimum level of service is not the District's desired level for providing education. At current program offerings and within existing permanent and portable facilities, the District's minimum level of service is:

Grade Level	# of Scheduled Teaching Stations	Min. Level of Service	2019-20 Level of Service*	2020-21 Level of Service*
K-5	313	25	22.7	21.0
6-8	166	30	22.8	22.2
9-12	161	33	27.9	27.7

**Note: COVID-19 resulted in Governor-mandated shift to online only learning during the 2019-20 school year. Ongoing pandemic related health and safety protocols resulted in distance learning for most of 2020-21 school year. Level of Service figures represent what in-person ratios would have been if all students had attended in person.*

SECTION 3 - CAPITAL FACILITIES INVENTORY

Under the GMA, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. Table 3.1 summarizes the permanent facility capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other district owned facilities or land.

School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards.

Schools

The District operates a kindergarten center, twelve elementary schools, four middle schools, two comprehensive high schools, a small choice high school, and the Sno-Isle Skills Center. Elementary schools accommodate grades K-5 with three elementary schools currently also serving preschool; middle schools serve grades 6-8; high schools provide for grades 9-12; ACES high school and the Sno-Isle Skills Center serve grades 10-12.

School capacity is determined based on the number of classrooms within each building and the space requirements of the District's currently adopted educational program. It is the capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment.

The Sno-Isle Skills Center is not included in capacity calculations or student enrollment projections for the purposes of capital facilities planning within the District. The Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes.

Relocatable classrooms (portables) are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Table 3.1.

Capacities will change from year-to-year based on changes to existing instructional programs, projected future programs and the resulting required space needed to deliver the instructional model at each specific site. Capacity takes into consideration the specific programs that actually take place in each of the rooms and the required service levels previously listed. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. Capacities are updated in each CFP to reflect current program needs and classroom utilization.

Table 3.1 – Permanent Facility Inventory

School	Site Size (Acres)	Bldg Area (Sq. Feet)	Year Built/ Modernized	Permanent Capacity
Challenger	10	50,022	1987	398

Total 9-12		556,871		3,639

*Shared site, acreage included in Fairmount Elementary

**ACES capacity is entirely in relocatable classrooms not considered permanent capacity.

Relocatable Classrooms (Portables)

Relocatable classrooms (portables) provide interim classroom space to house students until funding can be secured to construct permanent classrooms. The District currently uses 128 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. Current use of relocatable classrooms throughout the District is summarized in Table 3.2.

Table 3.2 – 2021-22 Portable Classroom Inventory

School	Classroom Portables	Interim Capacity
Challenger	11	175
Columbia	0	0
Discovery	14	305

Subtotal 9-12	45	883
TOTAL K-12	128	2,162

**The District's portable classrooms are in good condition and with ongoing maintenance have an indeterminate remaining useful life. Portables are calculated at 986 square feet per classroom.*

Schools Closed to Out of District Transfers

Schools continue to add capacity when portable classrooms are added and/or computer labs and other flexible spaces are converted to classroom spaces. However, this practice is not a long-term solution for capacity needs because the core facilities of the building do not support the additional enrollment. Therefore, the District calculates capacity for out-of-district transfers at the lesser of:

- The sum of permanent capacity and portable capacity, or
- 700 students for elementary schools; 825 students for middle schools; and 1,900 students for high schools.

In addition, any school that transfers kindergarten students to Pathfinder Kindergarten Center to provide space for first-through-fifth grade instruction is determined to be over capacity for the purposes of out-of-district transfers.

Support Facilities

In addition to schools, the District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided below:

Table 3.3 – Support Facility Inventory

Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Administration	9401 Sharon Dr., Everett	26,608	9.15
Grounds/Maintenance	525 W. Casino Rd., Everett	22,800	4.0
Support Services Center	8925 Airport Rd., Everett	37,677	10.0

Table 3.4 – Other Facility Inventory

Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Sno-Isle Skills Center	9001 Airport Rd., Everett	74,024	15.0

Land Inventory

The District owns one undeveloped site:

- A one-acre site in Mukilteo Heights which is restricted for development by covenants and site size.

The District does not own any sites that are developed for uses other than schools and/or which are leased to other parties.

SECTION 4 - STUDENT ENROLLMENT PROJECTIONS

Projected Student Enrollment 2022-2027

Enrollment projections are generally most accurate for the initial years of the forecast period. Beyond the 5-year range, projected assumptions about economic or demographic trends may prove false, resulting in an enrollment trend that is quite different from the projection. For this reason, it is important to monitor birth rates, new housing construction, and population growth on an annual basis as part of facilities management.

The District has contracted with a consultant to develop a methodology for enrollment projections. Dr. Les Kendrick has more than thirty years of history working with local school districts in projecting enrollment and demographics, including many years as the demographer for the Seattle Public Schools and twenty-two years as an independent consultant providing long-range projections for a number of school districts including; Bellevue, Bethel, Bremerton, Edmonds, Everett, Federal Way, Highline, Monroe, Northshore, Olympia, Puyallup, Seattle, Tacoma, Tukwila, South Kitsap, and Mukilteo. The methodology employed by the consultant is a variation of the cohort survival method. Cohort survival compares enrollment at a particular grade in a specific year, to the enrollment at the previous grade from the prior year. For example, enrollment at the second grade is compared to the previous year's first grade enrollment. The ratio of these two numbers (second grade enrollment divided by first grade enrollment) creates a "cohort survival ratio" providing a summary measure of the in-and-out migration that has occurred over the course of a year. This ratio can be calculated for each grade level. Once these ratios have been established over a period of years they can be averaged and/or weighted to predict the enrollment at each grade.

Cohort survival works well for every grade except kindergarten where there is no prior year's enrollment to use for comparison. At the kindergarten level, enrollment is compared to the county births from five years prior to estimate a "birth-to-k" ratio. This ratio, averaged over several years, provides a method for predicting what proportion of the birth cohort will enroll at the kindergarten level. The District's percentage of this cohort has varied over the past seven years from a high of 12.6% to a low of 12.1%. Future forecasts assume that the District will enroll over 12% of the County births.

Cohort survival is a purely mathematical method, which assumes that future enrollment patterns will be similar to past enrollment patterns. It makes no assumptions about what is causing enrollment gains or losses and can be easily applied to any enrollment history. Despite this, cohort survival can produce large forecast errors because it does not consider possible changes in demographic trends. New housing, especially, can produce enrollment gains that might not otherwise be predicted from past trends. Alternatively, a district may lose market share to private or other public schools. It is also possible that a slowdown in population and housing growth will dampen enrollment gains. Changes in the housing market between 2007 and 2011 and the accompanying recession, for example, caused many districts to see a decline in their enrollment during that period. Likewise, the COVID-19 pandemic in 2020 and related impacts have caused small enrollment declines but projections for both enrollment growth and new housing development show increases in near and long-term future. OSPI uses straight cohort survival which results in the projections contained in Appendix C. Because of the above listed gaps in that methodology, the District relies on our consultant's projections to gain a more comprehensive and accurate estimate.

For the Mukilteo School District forecast, the demographer combines the cohort survival method with information about market share gains and losses from private schools, information about population growth from new housing construction, and information about regional trends. The population/housing growth factor reflects projected changes in the housing market and/or in the assumptions about overall population growth within the District's boundary area. The enrollment derived from the cohort

model is adjusted upward or downward to account for expected shifts in the market for new homes, to account for changes in the growth of regional school age populations, and to account for projected changes in the District population.

Table 4.1 forecasts enrollment by combining cohort survival methodology with information about new housing development and the “birth-to-k” ratio methodology mentioned above. This model results in District enrollment reaching 15,141 by 2027. Because of the known information regarding new development and associated growth, as well as the length of time it takes to initiate new school construction projects to address growth, this plan uses the projections in Table 4.1 to determine facility needs during the six-year time frame of the Capital Facilities Plan.

Table 4.1 – Modified Cohort Enrollment Projections Head Count (including housing permit data and birth rate data)

Grade	Actual 2021	Projections					
		2022	2023	2024	2025	2026	2027
K	1,124	1,134	1,196	1,177	1,135	1,151	1,153
1	1,043	1,202	1,263	1,241	1,222	1,179	1,196
2	1,148	1,055	1,219	1,272	1,250	1,232	1,189
3	1,112	1,159	1,068	1,225	1,278	1,258	1,239

5	1,110	1,094	1,132	1,175	1,075	1,234	1,289
6	1,098	1,098	1,085	1,115	1,156	1,059	1,217
7	1,176	1,105	1,107	1,086	1,116	1,159	1,062
8	1,182	1,190	1,120	1,115	1,094	1,125	1,169
9	1,215	1,193	1,204	1,126	1,121	1,101	1,132
10	1,106	1,218	1,200	1,202	1,124	1,120	1,100
11	1,056	1,038	1,146	1,121	1,123	1,051	1,047
12	1,124	1,092	1,076	1,179	1,153	1,157	1,083
Total K-5	6,624	6,766	7,050	7,163	7,191	7,339	7,331
Total 6-8	3,456	3,393	3,312	3,316	3,366	3,343	3,448
Total 9-12	4,501	4,541	4,626	4,628	4,521	4,429	4,362
District Total	14,581	14,700	14,988	15,107	15,078	15,111	15,141

Snohomish County/OFM Projections

Another projection, based on Office of Financial Management (OFM) population projections for Snohomish County, was also produced. Using the OFM/County data and the District's corresponding actual enrollment, the District's enrollment averaged 1.77% of the OFM/County Population estimates. Further, District enrollment averaged 13.5% of the OFM/County population residing within Mukilteo School District boundaries. Assuming that these average percentages remain constant, the District's enrollment would grow as shown in Table 4.2.

Table 4.2 – Projected Enrollment - 2044 OFM Estimates*

Grade Level	Actual 2020	% MSD Population		% County Population	
		2027	2044	2027	2044
Elementary	6,565	7,255	9,237	7,278	9,010
Middle School	3,599	3,977	5,064	3,990	4,939
High School	4,454	4,922	6,267	4,938	6,113
Total	14,618	16,154	20,568	16,206	20,062

*Assumes that percentage per grade span will remain constant through 2044.

Note: Snohomish County Planning and Development Services provided the underlying data for the 2044 projections.

For the purposes of this Capital Facilities Plan, the District relies on the Modified Cohort Survival Projections as this projection provides a more detailed grade-specific projection which, when

combined with district-specific new housing development trends, allows for better planning across the six-year period.

SECTION 5 - CAPITAL FACILITIES NEEDS

Projected available student capacity is derived by subtracting projected student enrollment from existing student capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). A long-term projection of un-housed students and facilities needs is shown in Table 5.1. On February 11, 2020 voters approved a six-year, \$240 million capital bond. Planned new capacity improvements included in that bond are represented below, through 2026. The projects include new elementary classroom capacity from projects at three existing elementary schools and potential additional capacity at one existing high school. The District considers relocatable (portable) classrooms to be temporary/interim space and bases its new capital facilities needs from permanent capacity. (Information on relocatable classrooms and interim capacity can be found in Table 3.2.) However, relocatable classrooms are a part of the District's interim capacity solution to ensure our ability to serve enrollment growth from new development in between construction and capital bond timelines. Table 5.1 does not include relocatable classrooms that may be added or adjusted during the six-year planning period.

TABLE 5.1 – School Enrollment & Classroom Capacity Needs

	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28
Elementary Enrollment	6,624	6,766	7,050	7,163	7,191	7,339	7,331

Does not include interim/portable capacity

SECTION 6 – SIX-YEAR FINANCING PLAN

Planned Improvements

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, or that voter approved funding could not be secured, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options
- Changes in the instructional model
- Grade configuration change
- Purchasing portable classrooms
- Busing
- Increased class sizes; or
- A modified school-year calendar

The six-year financing plan includes projects adding elementary and high school classroom capacity. In addition, the District may continue to add and use portable classrooms as part of the capacity solution. It is anticipated that additional interim capacity via portable classrooms will be needed until additional permanent capacity beyond what was included in the voter approved February 2020 capital bond measure can be determined.

Funding for planned improvements is typically secured from several sources including voter approved bonds, state school construction assistance matching funds, and impact fees. Each of these funding sources is discussed in greater detail below.

Financing for Planned Improvements

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes.

Capital Projects Levy

The District has passed a six-year capital projects levy that runs through 2028. Capital project levy dollars will be dedicated to additional modernization and major system upgrades or modernization of buildings and grounds.

State School Construction Assistance Program (SCAP)

State School Construction Assistance Program (SCAP) funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund, and then retired from revenues accruing predominantly from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the Superintendent of Public Instruction can prioritize projects for funding.

School districts may qualify for SCAP funds for specific capital projects based on a qualification and criterion system. The District is currently eligible for SCAP funds for capital projects at the secondary school level and for some modernization/new in lieu at the elementary level. State match does not cover all costs of construction and each district has a different matching ratio based on the state's formula. Because SCAP funds are received at the end of a project, it is necessary for school districts

to plan to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds.

K-3 Class Size Reduction Grants

The 2015 Washington State Legislature provided limited funding for the construction of elementary classrooms to assist in the effort to provide space for full day kindergarten and to lower class sizes in K-3 grades. The District applied for this grant and a 24 classroom need was determined, but grant funds were not awarded.

Land Sales

The District currently has no property for sale.

Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

The six-year financing plan shown on Table 6.1 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include the voter-approved 2022 capital projects levy, funds from a voter approved capital bond measure in February 2020, impact fees and SCAP ("state match") funds.

SECTION 7 - SCHOOL IMPACT FEES

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities including schools) needed to accommodate growth from new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees

The Snohomish County General Policy Plan sets certain conditions for school districts wishing to assess impact fees:

- The district must provide support data including an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must reflect projected costs in the six-year financing plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types:
 1. single family
 2. multi-family/1-bedroom or less; and
 3. multi-family/2-bedroom or more which includes townhomes and duplexes.

The Snohomish County impact fee program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected facility costs necessitated by new growth and are contained in the District's CFP.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees have been calculated utilizing the formula in the Snohomish County Impact Fee Ordinance (SCC 30.66C). The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase/install relocatable facilities (portables) that add capacity needed to serve new development. As required under the GMA, credits have also been applied in the formula to account for SCAP ("state match") funds to be reimbursed to the District and for projected future property taxes to be paid by the dwelling unit.

Site Acquisition Cost Element

1. Site Size – Acreage needed to accommodate each planned project.
2. Average Land Cost Per Acre – based on current estimates of land costs within the District.
3. Facility Design Capacity – number of students each planned project is designed to accommodate.
4. Student Factor – Number of students generated by each housing type – in this case, single family dwellings and multi-family dwellings. A student generation rate study was conducted to determine the updated generation rate for this CFP. See Appendix A for the study information. Current student generation rates for the district are shown below:

Table 7.1 – Student Generation Rates*

Grade Span	Single Family	Multi-Family (1bdrm/less)	Multi-Family (2+bedroom)
Elementary (K-5)	.102	.043	.370
Middle School (6-8)	.038	.005	.182
High School (9-12)	.055	.003	.182
Total (K-12)	.195	.051	.734

*Full study info included in Appendices

School Construction Cost Variables

1. Current Facility Square Footage – used in combination with the “Existing Relocatable Square Footage” to apportion the impact fee amounts between permanent and interim capacity figures
2. Estimated Facility Construction Cost – based on planned costs or on actual costs of recently constructed schools. Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extension, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of relocatable classrooms needed to serve growth on an interim basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent and interim space ratios in the District.

1. Cost Per Unit – The average cost for a relocatable classroom.
2. Relocatable Facilities Cost – The total number of needed units multiplied by the cost per unit.

School Construction Assistance Credit Variables

1. Construction Cost Allocation – Currently \$246.83 for new construction projects approved in July of 2022.
2. State Funding Assistance Percentage – Percentage of School Construction Assistance Program funds from the state that the District expects to receive. For new construction and additions, the District is currently eligible to receive a maximum state match of 50.86% of *eligible* costs (as defined by the state).

Tax Credit Variables

1. Interest Rate (20-year General Obligation Bond) – interest rate of return on a 20-year General Obligation Bond derived from the Bond Buyer index. Because of current market volatility, the District is using the February 2022 average interest rate of 2.45%
2. Bond Levy Rate – The current bond levy rate is \$.90 per \$1,000 in assessed value.
3. Average Assessed Value – based on estimates made by the County’s Planning and Development Services Department utilizing information from the County Assessor’s files. The current average assessed value is \$622,683 for single family dwelling units; \$203,889 for one-bedroom multi-family dwelling units; and \$287,840 for two or more bedroom multi-family dwelling units.

Proposed Mukilteo School District Impact Fee Schedule

Using the variables and formula described, impact fees proposed for the District are summarized below. See Appendix B for the impact fee calculation detail. The impact fees below for Mukilteo School District reflect Single Family, Multi-Family 1 bedroom, and Multi-Family 2+bedroom dwelling units, including Townhomes and Duplexes.

Table 7.2 – School Impact Fees*

Housing Type	Impact Fee Per Unit
Single Family	\$1,121
Multi-Family (1 bedroom or less)	\$700
Multi-Family (2+ bedroom; Townhomes; Duplexes)	\$11,846

**Table 7.2 reflects a 50% adjustment to the calculated fee as required by local ordinances.*

APPENDIX A

STUDENT GENERATION RATE STUDY

MEMORANDUM

To: Karen Mooseker Executive Director, District Support Services Mukilteo School District	Date: April 22, 2022
From: Tyler Vick Managing Director Benjamin Maloney Demographer/Data Analyst	Project No.: F2133.01.003

Re: Student Generation Report— Mukilteo School District

At the request of the Mukilteo School District (District/MSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent residential construction within the district. This document details the methodology FLO used to create the SGRs for MSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. For the analysis, FLO considered new SF construction between 2016 and 2021, and new MF construction between 2016 and 2021. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2016 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of one MF project that was erroneously listed as having been completed between 2016 and 2021. This project is an apartment complex that was not completed as of December 2021. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 1,200 SF units completed between 2016 and 2021 and 11 MF projects completed between 2016 and 2021. While the majority of the SF construction consisted of units classified as "Single Family Residence – Condominium Detached" (499 units), a variety of units with other SF use codes were also constructed, including duplexes, common wall condominiums, and manufactured homes (owned and leased). MF development ranged from three and four family residences to a 300+ unit construction project. About 76 percent (1,216 units) of these new MF units were 2+ BR units, while the remainder (391 units) were 0–1 BR units.

R:\F2133.01 Mukilteo School District\Documents\003_2022.04.22 Student Generation Report\Mukilteo SD Student Generation Report 2022.docx

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 2

All students (grades kindergarten [K] through 12) in the October 1, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2016–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2016 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 1,200 SF units were compared to the 14,604 students enrolled with the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	31	0.026
1	18	0.015
2	20	0.017
3	21	0.018
4	22	0.018
5	10	0.008
6	26	0.022
7	13	0.011
8	6	0.005
9	22	0.018

6-8	45	0.038
9-12	66	0.055
K-12	233	0.194

Multifamily Developments

While SF data are mostly accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 3

FLO reached out to the building management at four projects constructed between January 2016 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Puget Park Apartments and Madison Way Apartments. Despite numerous attempts, no bedroom information could be received from Helm Apartments or Manor Way Apartments. Based on trends within and surrounding the district, FLO assumed 90 percent of the students would reside within a 2+ BR unit with the remaining 10 percent residing within a 0–1 BR unit. Other apartments (triplex, fourplex units, and one garden style apartment) were assessed visually using Google Earth and SCAO data.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 391 0–1 BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 1,216 2+ BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

SECTION 1 - INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (GMA) outlines 13 broad goals including the adequate provision of necessary public facilities and services. Public Schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Mukilteo School District (District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act and the codes of Snohomish County, City of Mukilteo, and City of Everett. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period, 2022-2027.

The District prepared its original CFP in 1994 based on the criteria set forth in the GMA. When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan. Appendix F established the criteria for future updates of the District's CFP.

In accordance with the Growth Management Act and the Snohomish County School Impact Fee Ordinance, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites. The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities which identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the guidelines set forth in Appendix F of the General Policy Plan:

- Information must be obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must be consistent with Office of Financial Management (OFM) population trends. Student generation rates must be independently calculated by each school district.
- The CFP must comply with RCW Chapter 36.70A (the Growth Management Act).
- The methodology used to calculate impact fees must comply with RCW Chapter 82.02. In the event that impact fees are not available due to action by the state, county, or cities within the District, future CFP's would identify alternative funding sources.

When the County adopted its School Impact Fee Ordinance in November 1997, it established the specific criteria for the adoption of a CFP and the assessment of impact fees in the County.

Section 3 of the ordinance defines the requirements for the biennial CFP updates. Table 1 of the ordinance outlines the formulae for determination of impact fees.

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Overview of the Mukilteo School District

Twenty-six square miles in area, the Mukilteo School District encompasses the City of Mukilteo, portions of the City of Everett, and portions of unincorporated Snohomish County. The District is bordered on the north and east by the Everett School District and by the Edmonds School District to the south.

The District serves a student population of 14,581 (October 2021) with one kindergarten center, twelve elementary schools (grades K-5), four middle schools (grades 6-8), two comprehensive high schools (grades 9-12), and one small choice high school (grades 10-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Sno-Isle Skills Center is not included as the Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes.

The most significant issues facing the District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Capacity needs during the six-year period of the plan at the elementary and high school grade spans.
- Uneven growth rates between geographic sectors within the District. These uneven growth patterns result in some schools reaching maximum capacity sooner than others and this will increase the difficulty of maintaining stable school service area boundaries.
- Uncertainty of growth rates for new housing development and enrollment given the unprecedented nature of the pandemic and its current impacts on construction. While the District experienced a pandemic-related enrollment decline, future projections still show growth and Snohomish County's Comprehensive Plan continues to identify large population growth in the coming years with high concentrations in the Mukilteo School District boundary areas.

SECTION 2 - DISTRICT EDUCATIONAL PROGRAM STANDARDS

Primary Objective

To best optimize student learning, Mukilteo School District establishes a service standard for classroom capacity utilization. This requires a constant review and assessment of curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Additional variables include changes in mandatory requirements issued by the state such as the implementation of full day kindergarten, Core 24 graduation requirements, and required reduction in class size ratios. These elements as well as demographic projections are weighed when determining service levels. School facility and student capacity needs are determined by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables). These elements, as well as demographic projections, are weighed when determining standard of service levels.

In addition to student population, other factors such as collective bargaining agreements, government mandates and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music/performing arts programs. These programs can have a significant impact on the available student capacity of school facilities.

District Educational Program Standards.

Special programs offered by the District at specific school sites include, but are not limited to:

Advanced Placement (high school)	Library/Media Centers
Special Education (resource or specialized)	Speech Language Pathologists
Special Education (early childhood)	Performing Arts
Summer School	Health & Fitness
Highly Capable Program (grades 3-8)	Science Labs
English as a Second Language (ESL)	OT/PT
English Language Learner (ELL)	Career Centers (High School)
World Languages	Student Stores (High School)
Community-Based Transition Program	Learning Assistance Programs (LAP)
ECEAP	Mukilteo Behavioral Support Center
Music Programs	Career and Technical Education
Computer & Technology Labs	College in the High School
Title 1 Support	Opportunity Day School

The above programs affect the capacity of some of the buildings housing these programs. Special programs usually require space modifications and frequently require lower class sizes than other, more traditional programs; this affects available school capacity as it results in greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year (as programs move or grow, depending on space needs, capacity can increase or decline in a school).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates and needs for special programs or use

of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The educational program standards that directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards for Elementary Schools

- Planning class size for Kindergarten through 3rd grade is 21 students per classroom
- Class size for Kindergarten through third grade cannot exceed 25 students
- Planning class size grades 4 and 5 is 23 students per classroom
- Class size for grades 4 and 5 cannot exceed 26 students
- Special Education for some students is provided in self-contained classrooms of 8-12 students per classroom
- Music and physical education instruction will be provided in a separate classroom
- Schools should have a room dedicated as a computer lab
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%

Educational Program Planning Standards for Middle and High Schools

- Planning class size for middle school grades is 25 students per teacher
- Class size for middle school grades 6 through 8 cannot exceed 30 students
- Planning class size for high school grades is 27 students per teacher
- Class size for high school grades 9 through 12 cannot exceed 33 students
- The ACES high school program limits capacity to 200 students
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%
- Identified students will also be provided other programs in classrooms designated as computer labs, resource rooms and other program specific classrooms (i.e., music, drama, art, family and consumer science, special education, career and technical education and English Language Learner).

Minimum Level of Service

Planning class sizes are used to determine school capacities, they are not a measure of the District's minimum level of service. The minimum level of service is defined as the maximum level of enrollment the District can accommodate at any given time. The minimum level of service is not the District's desired level for providing education. At current program offerings and within existing permanent and portable facilities, the District's minimum level of service is:

Grade Level	# of Scheduled Teaching Stations	Min. Level of Service	2019-20 Level of Service*	2020-21 Level of Service*
K-5	313	25	22.7	21.0
6-8	166	30	22.8	22.2
9-12	161	33	27.9	27.7

**Note: COVID-19 resulted in Governor-mandated shift to online only learning during the 2019-20 school year. Ongoing pandemic related health and safety protocols resulted in distance learning for most of 2020-21 school year. Level of Service figures represent what in-person ratios would have been if all students had attended in person.*

SECTION 3 - CAPITAL FACILITIES INVENTORY

Under the GMA, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. Table 3.1 summarizes the permanent facility capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other district owned facilities or land.

School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards.

Schools

The District operates a kindergarten center, twelve elementary schools, four middle schools, two comprehensive high schools, a small choice high school, and the Sno-Isle Skills Center. Elementary schools accommodate grades K-5 with three elementary schools currently also serving preschool; middle schools serve grades 6-8; high schools provide for grades 9-12; ACES high school and the Sno-Isle Skills Center serve grades 10-12.

School capacity is determined based on the number of classrooms within each building and the space requirements of the District's currently adopted educational program. It is the capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment.

The Sno-Isle Skills Center is not included in capacity calculations or student enrollment projections for the purposes of capital facilities planning within the District. The Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes. Relocatable classrooms (portables) are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Table 3.1.

Capacities will change from year-to-year based on changes to existing instructional programs, projected future programs and the resulting required space needed to deliver the instructional model at each specific site. Capacity takes into consideration the specific programs that actually take place in each of the rooms and the required service levels previously listed. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. Capacities are updated in each CFP to reflect current program needs and classroom utilization.

Table 3.1 – Permanent Facility Inventory

School	Site Size (Acres)	Bldg Area (Sq. Feet)	Year Built/ Modernized	Permanent Capacity

Total 9-12		556,871		3,639

*Shared site, acreage included in Fairmount Elementary

**ACES capacity is entirely in relocatable classrooms not considered permanent capacity.

Relocatable Classrooms (Portables)

Relocatable classrooms (portables) provide interim classroom space to house students until funding can be secured to construct permanent classrooms. The District currently uses 128 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. Current use of relocatable classrooms throughout the District is summarized in Table 3.2.

Table 3.2 – 2021-22 Portable Classroom Inventory

School	Classroom Portables	Interim Capacity
Challenger	11	175
Columbia	0	0

TOTAL K-12	128	2,162

**The District's portable classrooms are in good condition and with ongoing maintenance have an indeterminate remaining useful life. Portables are calculated at 986 square feet per classroom.*

Schools Closed to Out of District Transfers

Schools continue to add capacity when portable classrooms are added and/or computer labs and other flexible spaces are converted to classroom spaces. However, this practice is not a long-term solution for capacity needs because the core facilities of the building do not support the additional enrollment. Therefore, the District calculates capacity for out-of-district transfers at the lesser of:

- The sum of permanent capacity and portable capacity, or
- 700 students for elementary schools; 825 students for middle schools; and 1,900 students for high schools.

In addition, any school that transfers kindergarten students to Pathfinder Kindergarten Center to provide space for first-through-fifth grade instruction is determined to be over capacity for the purposes of out-of-district transfers.

Support Facilities

In addition to schools, the District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided below:

Table 3.3 – Support Facility Inventory			
Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Administration	9401 Sharon Dr., Everett	26,608	9.15
Grounds/Maintenance	525 W. Casino Rd., Everett	22,800	4.0
Support Services Center	8925 Airport Rd., Everett	37,677	10.0

Table 3.4 – Other Facility Inventory			
Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Sno-Isle Skills Center	9001 Airport Rd., Everett	74,024	15.0

Land Inventory

The District owns one undeveloped site:

- A one-acre site in Mukilteo Heights which is restricted for development by covenants and site size.

The District does not own any sites that are developed for uses other than schools and/or which are leased to other parties.

SECTION 4 - STUDENT ENROLLMENT PROJECTIONS

Projected Student Enrollment 2022-2027

Enrollment projections are generally most accurate for the initial years of the forecast period. Beyond the 5 year range, projected assumptions about economic or demographic trends may prove false, resulting in an enrollment trend that is quite different from the projection. For this reason, it is important to monitor birth rates, new housing construction, and population growth on an annual basis as part of facilities management.

The District has contracted with a consultant to develop a methodology for enrollment projections. Dr. Les Kendrick has more than thirty years of history working with local school districts in projecting enrollment and demographics, including many years as the demographer for the Seattle Public Schools and twenty two years as an independent consultant providing long-range projections for a number of school districts including; Bellevue, Bethel, Bremerton, Edmonds, Everett, Federal Way, Highline, Monroe, Northshore, Olympia, Puyallup, Seattle, Tacoma, Tukwila, South Kitsap, and Mukilteo. The methodology employed by the consultant is a variation of the cohort survival method. Cohort survival compares enrollment at a particular grade in a specific year, to the enrollment at the previous grade from the prior year. For example, enrollment at the second grade is compared to the previous year's first grade enrollment. The ratio of these two numbers (second grade enrollment divided by first grade enrollment) creates a "cohort survival ratio" providing a summary measure of the in-and-out migration that has occurred over the course of a year. This ratio can be calculated for each grade level. Once these ratios have been established over a period of years they can be averaged and/or weighted to predict the enrollment at each grade.

Cohort survival works well for every grade except kindergarten where there is no prior year's enrollment to use for comparison. At the kindergarten level, enrollment is compared to the county births from five years prior to estimate a "birth-to-k" ratio. This ratio, averaged over several years, provides a method for predicting what proportion of the birth cohort will enroll at the kindergarten level. The District's percentage of this cohort has varied over the past seven years from a high of 12.6% to a low of 12.1%. Future forecasts assume that the District will enroll over 12% of the County births.

Cohort survival is a purely mathematical method, which assumes that future enrollment patterns will be similar to past enrollment patterns. It makes no assumptions about what is causing enrollment gains or losses and can be easily applied to any enrollment history. Despite this, cohort survival can produce large forecast errors because it does not consider possible changes in demographic trends. New housing, especially, can produce enrollment gains that might not otherwise be predicted from past trends. Alternatively, a district may lose market share to private or other public schools. It is also possible that a slowdown in population and housing growth will dampen enrollment gains. Changes in the housing market between 2007 and 2011 and the accompanying recession, for example, caused many districts to see a decline in their enrollment during that period. Likewise, the COVID-19 pandemic in 2020 and related impacts have caused small enrollment declines but projections for both enrollment growth and new housing development show increases in near and long-term future. OSPI uses straight cohort survival which results in the projections contained in Appendix C. Because of the above listed gaps in that methodology, the District relies on our consultant's projections to gain a more comprehensive and accurate estimate.

For the Mukilteo School District forecast, the demographer combines the cohort survival method with information about market share gains and losses from private schools, information about population growth from new housing construction, and information about regional trends. The population/housing growth factor reflects projected changes in the housing market and/or in the assumptions about overall population growth within the District's boundary area. The enrollment derived from the cohort model is adjusted upward or downward to account for expected shifts in the market for new homes, to account for changes in the growth of regional school age populations, and to account for projected changes in the District population.

Table 4.1 forecasts enrollment by combining cohort survival methodology with information about new housing development and the "birth-to-k" ratio methodology mentioned above. This model results in District enrollment reaching 15,141 by 2027. Because of the known information regarding new development and associated growth, as well as the length of time it takes to initiate new school construction projects to address growth, this plan uses the projections in Table 4.1 to determine facility needs during the six-year time frame of the Capital Facilities Plan.

Table 4.1 – Modified Cohort Enrollment Projections Head Count (including housing permit data and birth rate data)

Grade	Actual 2021	Projections					
		2022	2023	2024	2025	2026	2027

Snohomish County/OFM Projections

Another projection, based on Office of Financial Management (OFM) population projections for Snohomish County, was also produced. Using the OFM/County data and the District's corresponding actual enrollment, the District's enrollment averaged 1.77% of the OFM/County Population estimates. Further, District enrollment averaged 13.5% of the OFM/County population residing within Mukilteo School District boundaries. Assuming that these average percentages remain constant, the District's enrollment would grow as shown in Table 4.2.

Table 4.2 – Projected Enrollment - 2044 OFM Estimates*

Grade Level	Actual 2020	% MSD Population		% County Population	
		2027	2044	2027	2044
Elementary	6,565	7,255	9,237	7,278	9,010
Middle School	3,599	3,977	5,064	3,990	4,939
High School	4,454	4,922	6,267	4,938	6,113
Total	14,618	16,154	20,568	16,206	20,062

*Assumes that percentage per grade span will remain constant through 2044.

Note: Snohomish County Planning and Development Services provided the underlying data for the 2044 projections.

For the purposes of this Capital Facilities Plan, the District relies on the Modified Cohort Survival Projections as this projection provides a more detailed grade-specific projection which, when combined with district-specific new housing development trends, allows for better planning across the six-year period.

SECTION 5 - CAPITAL FACILITIES NEEDS

Projected available student capacity is derived by subtracting projected student enrollment from existing student capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). A long-term projection of un-housed students and facilities needs is shown in Table 5.1. On February 11, 2020 voters approved a six-year, \$240 million capital bond. Planned new capacity improvements included in that bond are represented below, through 2026. The projects include new elementary classroom capacity from projects at three existing elementary schools and potential additional capacity at one existing high school. The District considers relocatable (portable) classrooms to be temporary/interim space and bases its new capital facilities needs from permanent capacity. (Information on relocatable classrooms and interim capacity can be found in Table 3.2.) However, relocatable classrooms are a part of the District's interim capacity solution to ensure our ability to serve enrollment growth from new development in between construction and capital bond timelines. Table 5.1 does not include relocatable classrooms that may be added or adjusted during the six-year planning period.

TABLE 5.1 – School Enrollment & Classroom Capacity Needs

	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28

Does not include interim/portable capacity

SECTION 6 – SIX-YEAR FINANCING PLAN

Planned Improvements

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, or that voter approved funding could not be secured, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options
- Changes in the instructional model
- Grade configuration change
- Purchasing portable classrooms
- Busing
- Increased class sizes; or
- A modified school-year calendar

The six-year financing plan includes projects adding elementary and high school classroom capacity. In addition, the District may continue to add and use portable classrooms as part of the capacity solution. It is anticipated that additional interim capacity via portable classrooms will be needed until additional permanent capacity beyond what was included in the voter approved February 2020 capital bond measure can be determined.

Funding for planned improvements is typically secured from a number of sources including voter approved bonds, state school construction assistance matching funds, and impact fees. Each of these funding sources is discussed in greater detail below.

Financing for Planned Improvements

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes.

Capital Projects Levy

The District has passed a six-year capital projects levy that runs through 2028. Capital project levy dollars will be dedicated to additional modernization and major system upgrades or modernization of buildings and grounds.

State School Construction Assistance Program (SCAP)

State School Construction Assistance Program (SCAP) funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund, and then retired from revenues accruing predominantly from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the Superintendent of Public Instruction can prioritize projects for funding.

School districts may qualify for SCAP funds for specific capital projects based on a qualification and criterion system. The District is currently eligible for SCAP funds for capital projects at the secondary school level and for some modernization/new in lieu at the elementary level. State match does not cover all costs of construction and each district has a different matching ratio based on the state's formula. Because SCAP funds are received at the end of a project, it is

necessary for school districts to plan to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds.

K-3 Class Size Reduction Grants

The 2015 Washington State Legislature provided limited funding for the construction of elementary classrooms to assist in the effort to provide space for full day kindergarten and to lower class sizes in K-3 grades. The District applied for this grant and a 24 classroom need was determined, but grant funds were not awarded.

Land Sales

The District currently has no property for sale.

Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

The six-year financing plan shown on Table 6.1 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include the voter-approved 2022 capital projects levy, funds from a voter approved capital bond measure in February 2020, impact fees and SCAP ("state match") funds.

SECTION 7 - SCHOOL IMPACT FEES

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities including schools) needed to accommodate growth from new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees

The Snohomish County General Policy Plan sets certain conditions for school districts wishing to assess impact fees:

- The district must provide support data including an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must reflect projected costs in the six-year financing plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types:
 1. single family
 2. multi-family/1-bedroom or less; and
 3. multi-family/2-bedroom or more.

The Snohomish County impact fee program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected facility costs necessitated by new growth and are contained in the District's CFP.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees have been calculated utilizing the formula in the Snohomish County Impact Fee Ordinance (SCC 30.66C). The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase/install relocatable facilities (portables) that add capacity needed to serve new development. As required under the GMA, credits have also been applied in the formula to account for SCAP ("state match") funds to be reimbursed to the District and for projected future property taxes to be paid by the dwelling unit.

Site Acquisition Cost Element

1. Site Size – Acreage needed to accommodate each planned project.
2. Average Land Cost Per Acre – based on current estimates of land costs within the District.
3. Facility Design Capacity – number of students each planned project is designed to accommodate.
4. Student Factor – Number of students generated by each housing type – in this case, single family dwellings and multi-family dwellings. A student generation rate study was conducted to determine the updated generation rate for this CFP. See Appendix A for the study information. Current student generation rates for the district are shown below:

Table 7.1 – Student Generation Rates*

Grade Span	Single Family	Multi-Family (1bdm/less)	Multi-Family (2+bedroom)
Elementary (K-5)	.102	.043	.370
Middle School (6-8)	.038	.005	.182
High School (9-12)	.055	.003	.182
Total (K-12)	.195	.051	.734

*Full study info included in Appendices

School Construction Cost Variables

1. Current Facility Square Footage – used in combination with the “Existing Relocatable Square Footage” to apportion the impact fee amounts between permanent and interim capacity figures
2. Estimated Facility Construction Cost – based on planned costs or on actual costs of recently constructed schools. Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extension, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of relocatable classrooms needed to serve growth on an interim basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent and interim space ratios in the District.

1. Cost Per Unit – The average cost to purchase and install a relocatable classroom.
2. Relocatable Facilities Cost – The total number of needed units multiplied by the cost per unit.

School Construction Assistance Credit Variables

1. Construction Cost Allocation – Currently \$246.82 for new construction projects approved in July of 2022.
2. State Funding Assistance Percentage – Percentage of School Construction Assistance Program funds from the state that the District expects to receive. For new construction and additions, the District is currently eligible to receive a maximum state match of 50.86% of *eligible* costs (as defined by the state).

Tax Credit Variables

1. Interest Rate (20-year General Obligation Bond) – interest rate of return on a 20-year General Obligation Bond derived from the Bond Buyer index. Because of current market volatility, the District is using the February 2022 average interest rate of 2.45%
2. Bond Levy Rate – The current bond levy rate is \$.90 per \$1,000 in assessed value.
3. Average Assessed Value – based on estimates made by the County’s Planning and Development Services Department utilizing information from the County Assessor’s files. The current average assessed value is \$622,683 for single family dwelling units;

\$203,889 for one-bedroom multi-family dwelling units; and \$287,840 for two or more bedroom multi-family dwelling units.

Proposed Mukilteo School District Impact Fee Schedule

Using the variables and formula described, impact fees proposed for the District are summarized below. See Appendix B for the impact fee calculation detail. Please note that while Multi-Family 1 bedroom or less developments generated a small number of new students, when computed via the impact fee calculation formula, the number generated was too small to result in a proposed impact fee for 1-bedroom or less multi-family dwelling units. The impact fees below for Mukilteo School District reflect Single Family and Multi-Family 2+bedroom dwelling units.

Table 7.2 – School Impact Fees*

Housing Type	Impact Fee Per Unit
Single Family	\$1,053
Multi-Family (1 bedroom or less)	\$0
Multi-Family (2+ bedroom)	\$11,374

**Table 7.2 reflects a 50% adjustment to the calculated fee as required by local ordinances.*

APPENDIX A

STUDENT GENERATION RATE STUDY

MEMORANDUM

To: Karen Mooseker Executive Director, District Support Services Mukilteo School District	Date: April 22, 2022
From: Tyler Vick Managing Director Benjamin Maloney Demographer/Data Analyst	Project No.: F2133.01.003

Re: Student Generation Report— Mukilteo School District

At the request of the Mukilteo School District (District/MSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent residential construction within the district. This document details the methodology FLO used to create the SGRs for MSD; an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. For the analysis, FLO considered new SF construction between 2016 and 2021, and new MF construction between 2016 and 2021. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2016 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of one MF project that was erroneously listed as having been completed between 2016 and 2021. This project is an apartment complex that was not completed as of December 2021. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 1,200 SF units completed between 2016 and 2021 and 11 MF projects completed between 2016 and 2021. While the majority of the SF construction consisted of units classified as "Single Family Residence – Condominium Detached" (499 units), a variety of units with other SF use codes were also constructed, including duplexes, common wall condominiums, and manufactured homes (owned and leased). MF development ranged from three and four family residences to a 300+ unit construction project. About 76 percent (1,216 units) of these new MF units were 2+ BR units, while the remainder (391 units) were 0–1 BR units.

R:\F2133.01 Mukilteo School District\Documents\003_2022.04.22 Student Generation Report\Mukilteo SD Student Generation Report 2022.docx

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 2

All students (grades kindergarten [K] through 12) in the October 1, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2016–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2016 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 1,200 SF units were compared to the 14,604 students enrolled with the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	31	0.026
1	18	0.015
2	20	0.017
3	21	0.018
4	22	0.018
5	10	0.008
6	26	0.022
7	13	0.011
8	6	0.005
9	22	0.018
10	11	0.009
11	17	0.014
12	16	0.013

6–8	45	0.038
9–12	66	0.055
K–12	233	0.194

Multifamily Developments

While SF data are mostly accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 3

FLO reached out to the building management at four projects constructed between January 2016 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Puget Park Apartments and Madison Way Apartments. Despite numerous attempts, no bedroom information could be received from Helm Apartments or Manor Way Apartments. Based on trends within and surrounding the district, FLO assumed 90 percent of the students would reside within a 2+ BR unit with the remaining 10 percent residing within a 0–1 BR unit. Other apartments (triplex, fourplex units, and one garden style apartment) were assessed visually using Google Earth and SCAO data.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 391 0–1 BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

Grade	Matches	Rate

Project No. F2133.01.003
Page 4

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 1,216 2+ BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

SECTION 1 - INTRODUCTION

Purpose of the Capital Facilities Plan

The Washington State Growth Management Act (GMA) outlines 13 broad goals including the adequate provision of necessary public facilities and services. Public Schools are among these necessary facilities and services. Public school districts adopt capital facilities plans to satisfy the requirements of RCW 36.70A.070 and to identify additional school facilities necessary to meet the educational needs of the growing student populations anticipated in their districts.

The Mukilteo School District (District) has prepared this six-year Capital Facilities Plan (CFP) in accordance with the Washington State Growth Management Act and the codes of Snohomish County, City of Mukilteo, and City of Everett. This CFP is intended to provide these jurisdictions with a description of projected student enrollment and school capacities at established levels of service over the six-year period, 2022-2027.

The District prepared its original CFP in 1994 based on the criteria set forth in the GMA. When Snohomish County adopted its GMA Comprehensive Plan in 1995, it addressed future school capital facilities plans in Appendix F of the General Policy Plan. Appendix F established the criteria for future updates of the District's CFP.

In accordance with the Growth Management Act and the Snohomish County School Impact Fee Ordinance, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary, middle, and high schools).
- An inventory of existing capital facilities owned by the District showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites. The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities which identifies sources of public money for such purposes. The financing plan separates projects and portions of projects that add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- A calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the guidelines set forth in Appendix F of the General Policy Plan:

- Information must be obtained from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must be consistent with Office of Financial Management (OFM) population trends. Student generation rates must be independently calculated by each school district.
- The CFP must comply with RCW Chapter 36.70A (the Growth Management Act).
- The methodology used to calculate impact fees must comply with RCW Chapter 82.02. In the event that impact fees are not available due to action by the state, county, or cities within the District, future CFP's would identify alternative funding sources.

When the County adopted its School Impact Fee Ordinance in November 1997, it established the specific criteria for the adoption of a CFP and the assessment of impact fees in the County. Section 3

of the ordinance defines the requirements for the biennial CFP updates. Table 1 of the ordinance outlines the formulae for determination of impact fees.

Snohomish County's Countywide Planning Policies direct jurisdictions in Snohomish County to "ensure the availability of sufficient land and services for future K-20 school needs." Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Overview of the Mukilteo School District

Twenty-six square miles in area, the Mukilteo School District encompasses the City of Mukilteo, portions of the City of Everett, and portions of unincorporated Snohomish County. The District is bordered on the north and east by the Everett School District and by the Edmonds School District to the south.

The District serves a student population of 14,581 (October 2021) with one kindergarten center, twelve elementary schools (grades K-5), four middle schools (grades 6-8), two comprehensive high schools (grades 9-12), and one small choice high school (grades 10-12). For the purposes of facility planning, this CFP considers grades K-5 as elementary, grades 6-8 as middle school, and grades 9-12 as high school. For purposes of this CFP, enrollment in the Sno-Isle Skills Center is not included as the Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes.

The most significant issues facing the District in terms of providing classroom capacity to accommodate existing and projected demands are:

- Capacity needs during the six-year period of the plan at the elementary and high school grade spans.
- Uneven growth rates between geographic sectors within the District. These uneven growth patterns result in some schools reaching maximum capacity sooner than others and this will increase the difficulty of maintaining stable school service area boundaries.
- Uncertainty of growth rates for new housing development and enrollment given the unprecedented nature of the pandemic and its current impacts on construction. While the District experienced a pandemic-related enrollment decline, future projections still show growth and Snohomish County's Comprehensive Plan continues to identify large population growth in the coming years with high concentrations in the Mukilteo School District boundary areas.

SECTION 2 - DISTRICT EDUCATIONAL PROGRAM STANDARDS

Primary Objective

To best optimize student learning, Mukilteo School District establishes a service standard for classroom capacity utilization. This requires a constant review and assessment of curriculum and instructional changes, student learning behaviors, learning environments, technological innovations and program development. Additional variables include changes in mandatory requirements issued by the state such as the implementation of full day kindergarten, Core 24 graduation requirements, and required reduction in class size ratios. These elements as well as demographic projections are weighed when determining service levels. School facility and student capacity needs are determined by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards that typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classrooms (portables). These elements, as well as demographic projections, are weighed when determining standard of service levels.

In addition to student population, other factors such as collective bargaining agreements, government mandates and community expectations also affect classroom space requirements. Traditional educational programs are often supplemented by programs such as special education, bilingual education, preschool and daycare programs, computer labs, and music/performing arts programs. These programs can have a significant impact on the available student capacity of school facilities.

District Educational Program Standards.

Special programs offered by the District at specific school sites include, but are not limited to:

Advanced Placement (high school)	Library/Media Centers
Special Education (resource or specialized)	Speech Language Pathologists
Special Education (early childhood)	Performing Arts
Summer School	Health & Fitness
Highly Capable Program (grades 3-8)	Science Labs
English as a Second Language (ESL)	OT/PT
English Language Learner (ELL)	Career Centers (High School)
World Languages	Student Stores (High School)
Community-Based Transition Program	Learning Assistance Programs (LAP)
ECEAP	Mukilteo Behavioral Support Center
Music Programs	Career and Technical Education
Computer & Technology Labs	College in the High School
Title 1 Support	Opportunity Day School

The above programs affect the capacity of some of the buildings housing these programs. Special programs usually require space modifications and frequently require lower class sizes than other, more traditional programs; this affects available school capacity as it results in greater space requirements. These requirements affect the utilization of rooms and result in school capacities varying from year to year (as programs move or grow, depending on space needs, capacity can increase or decline in a school).

District educational program standards may change in the future as a result of various external or internal changes. External changes may include mandates and needs for special programs or use of technology. Internal changes may include modifications to the program year, class sizes, and grade span configurations. Changes in physical aspects of the school facilities could also affect educational

program standards. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this CFP.

The educational program standards that directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

Educational Program Standards for Elementary Schools

- Planning class size for Kindergarten through 3rd grade is 21 students per classroom
- Class size for Kindergarten through third grade cannot exceed 25 students
- Planning class size grades 4 and 5 is 23 students per classroom
- Class size for grades 4 and 5 cannot exceed 26 students
- Special Education for some students is provided in self-contained classrooms of 8-12 students per classroom
- Music and physical education instruction will be provided in a separate classroom
- Schools should have a room dedicated as a computer lab
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%

Educational Program Planning Standards for Middle and High Schools

- Planning class size for middle school grades is 25 students per teacher
- Class size for middle school grades 6 through 8 cannot exceed 30 students
- Planning class size for high school grades is 27 students per teacher
- Class size for high school grades 9 through 12 cannot exceed 33 students
- The ACES high school program limits capacity to 200 students
- It is not possible to achieve 100% utilization of all regular teaching stations throughout the day. Therefore, classroom capacity is adjusted using a utilization factor of 85%
- Identified students will also be provided other programs in classrooms designated as computer labs, resource rooms and other program specific classrooms (i.e., music, drama, art, family and consumer science, special education, career and technical education and English Language Learner).

Minimum Level of Service

Planning class sizes are used to determine school capacities, they are not a measure of the District's minimum level of service. The minimum level of service is defined as the maximum level of enrollment the District can accommodate at any given time. The minimum level of service is not the District's desired level for providing education. At current program offerings and within existing permanent and portable facilities, the District's minimum level of service is:

Grade Level	# of Scheduled Teaching Stations	Min. Level of Service	2019-20 Level of Service*	2020-21 Level of Service*
K-5	313	25	22.7	21.0
6-8	166	30	22.8	22.2
9-12	161	33	27.9	27.7

**Note: COVID-19 resulted in Governor-mandated shift to online only learning during the 2019-20 school year. Ongoing pandemic related health and safety protocols resulted in distance learning for most of 2020-21 school year. Level of Service figures represent what in-person ratios would have been if all students had attended in person.*

SECTION 3 - CAPITAL FACILITIES INVENTORY

Under the GMA, a public entity must periodically determine its capacity by conducting an inventory of its capital facilities. Table 3.1 summarizes the permanent facility capacity owned and operated by the District. Information is also provided on relocatable classrooms (portables), school sites and other district owned facilities or land.

School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards.

Schools

The District operates a kindergarten center, twelve elementary schools, four middle schools, two comprehensive high schools, a small choice high school, and the Sno-Isle Skills Center. Elementary schools accommodate grades K-5 with three elementary schools currently also serving preschool; middle schools serve grades 6-8; high schools provide for grades 9-12; ACES high school and the Sno-Isle Skills Center serve grades 10-12.

School capacity is determined based on the number of classrooms within each building and the space requirements of the District's currently adopted educational program. It is the capacity calculation that is used to establish the District's baseline capacity, and to determine future capacity needs based on projected student enrollment.

The Sno-Isle Skills Center is not included in capacity calculations or student enrollment projections for the purposes of capital facilities planning within the District. The Skills Center is a regional career and technical education partnership serving students from 14 different school districts and does not have space that can be utilized by Mukilteo School District for its traditional K-12 education purposes.

Relocatable classrooms (portables) are not viewed by the District as a solution for housing students on a permanent basis. Therefore, these facilities were not included in the school capacity calculations provided in Table 3.1.

Capacities will change from year-to-year based on changes to existing instructional programs, projected future programs and the resulting required space needed to deliver the instructional model at each specific site. Capacity takes into consideration the specific programs that actually take place in each of the rooms and the required service levels previously listed. Because of the need to provide planning time and space for teacher preparation or other required services, some facilities will only support a capacity utilization of 85%. Capacities are updated in each CFP to reflect current program needs and classroom utilization.

Table 3.1 – Permanent Facility Inventory

School	Site Size (Acres)	Bldg Area (Sq. Feet)	Year Built/ Modernized	Permanent Capacity

Total 9-12		556,871		3,639

*Shared site, acreage included in Fairmount Elementary

**ACES capacity is entirely in relocatable classrooms not considered permanent capacity.

Relocatable Classrooms (Portables)

Relocatable classrooms (portables) provide interim classroom space to house students until funding can be secured to construct permanent classrooms. The District currently uses 128 relocatable classrooms at various school sites throughout the District to provide additional interim capacity. Current use of relocatable classrooms throughout the District is summarized in Table 3.2.

Table 3.2 – 2021-22 Portable Classroom Inventory

School	Classroom Portables	Interim Capacity

Subtotal 9-12	45	883
TOTAL K-12	128	2,162

**The District's portable classrooms are in good condition and with ongoing maintenance have an indeterminate remaining useful life. Portables are calculated at 986 square feet per classroom.*

Schools Closed to Out of District Transfers

Schools continue to add capacity when portable classrooms are added and/or computer labs and other flexible spaces are converted to classroom spaces. However, this practice is not a long-term solution for capacity needs because the core facilities of the building do not support the additional enrollment. Therefore, the District calculates capacity for out-of-district transfers at the lesser of:

- The sum of permanent capacity and portable capacity, or
- 700 students for elementary schools; 825 students for middle schools; and 1,900 students for high schools.

In addition, any school that transfers kindergarten students to Pathfinder Kindergarten Center to provide space for first-through-fifth grade instruction is determined to be over capacity for the purposes of out-of-district transfers.

Support Facilities

In addition to schools, the District owns and operates additional facilities that provide operational support functions to the schools. An inventory of these facilities is provided below:

Table 3.3 – Support Facility Inventory

Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Administration	9401 Sharon Dr., Everett	26,608	9.15
Grounds/Maintenance	525 W. Casino Rd., Everett	22,800	4.0
Support Services Center	8925 Airport Rd., Everett	37,677	10.0

Table 3.4 – Other Facility Inventory

Facility	Address	Building Area (Square Feet)	Site Size (Acres)
Sno-Isle Skills Center	9001 Airport Rd., Everett	74,024	15.0

Land Inventory

The District owns one undeveloped site:

- A one-acre site in Mukilteo Heights which is restricted for development by covenants and site size.

The District does not own any sites that are developed for uses other than schools and/or which are leased to other parties.

SECTION 4 - STUDENT ENROLLMENT PROJECTIONS

Projected Student Enrollment 2022-2027

Enrollment projections are generally most accurate for the initial years of the forecast period. Beyond the 5-year range, projected assumptions about economic or demographic trends may prove false, resulting in an enrollment trend that is quite different from the projection. For this reason, it is important to monitor birth rates, new housing construction, and population growth on an annual basis as part of facilities management.

The District has contracted with a consultant to develop a methodology for enrollment projections. Dr. Les Kendrick has more than thirty years of history working with local school districts in projecting enrollment and demographics, including many years as the demographer for the Seattle Public Schools and twenty-two years as an independent consultant providing long-range projections for a number of school districts including; Bellevue, Bethel, Bremerton, Edmonds, Everett, Federal Way, Highline, Monroe, Northshore, Olympia, Puyallup, Seattle, Tacoma, Tukwila, South Kitsap, and Mukilteo. The methodology employed by the consultant is a variation of the cohort survival method. Cohort survival compares enrollment at a particular grade in a specific year, to the enrollment at the previous grade from the prior year. For example, enrollment at the second grade is compared to the previous year's first grade enrollment. The ratio of these two numbers (second grade enrollment divided by first grade enrollment) creates a "cohort survival ratio" providing a summary measure of the in-and-out migration that has occurred over the course of a year. This ratio can be calculated for each grade level. Once these ratios have been established over a period of years they can be averaged and/or weighted to predict the enrollment at each grade.

Cohort survival works well for every grade except kindergarten where there is no prior year's enrollment to use for comparison. At the kindergarten level, enrollment is compared to the county births from five years prior to estimate a "birth-to-k" ratio. This ratio, averaged over several years, provides a method for predicting what proportion of the birth cohort will enroll at the kindergarten level. The District's percentage of this cohort has varied over the past seven years from a high of 12.6% to a low of 12.1%. Future forecasts assume that the District will enroll over 12% of the County births.

Cohort survival is a purely mathematical method, which assumes that future enrollment patterns will be similar to past enrollment patterns. It makes no assumptions about what is causing enrollment gains or losses and can be easily applied to any enrollment history. Despite this, cohort survival can produce large forecast errors because it does not consider possible changes in demographic trends. New housing, especially, can produce enrollment gains that might not otherwise be predicted from past trends. Alternatively, a district may lose market share to private or other public schools. It is also possible that a slowdown in population and housing growth will dampen enrollment gains. Changes in the housing market between 2007 and 2011 and the accompanying recession, for example, caused many districts to see a decline in their enrollment during that period. Likewise, the COVID-19 pandemic in 2020 and related impacts have caused small enrollment declines but projections for both enrollment growth and new housing development show increases in near and long-term future. OSPI uses straight cohort survival which results in the projections contained in Appendix C. Because of the above listed gaps in that methodology, the District relies on our consultant's projections to gain a more comprehensive and accurate estimate.

For the Mukilteo School District forecast, the demographer combines the cohort survival method with information about market share gains and losses from private schools, information about population growth from new housing construction, and information about regional trends. The population/housing growth factor reflects projected changes in the housing market and/or in the assumptions about overall population growth within the District's boundary area. The enrollment derived from the cohort

model is adjusted upward or downward to account for expected shifts in the market for new homes, to account for changes in the growth of regional school age populations, and to account for projected changes in the District population.

Table 4.1 forecasts enrollment by combining cohort survival methodology with information about new housing development and the “birth-to-k” ratio methodology mentioned above. This model results in District enrollment reaching 15,141 by 2027. Because of the known information regarding new development and associated growth, as well as the length of time it takes to initiate new school construction projects to address growth, this plan uses the projections in Table 4.1 to determine facility needs during the six-year time frame of the Capital Facilities Plan.

Table 4.1 – Modified Cohort Enrollment Projections Head Count (including housing permit data and birth rate data)

Grade	Actual 2021	Projections					
		2022	2023	2024	2025	2026	2027
K	1,124	1,134	1,196	1,177	1,135	1,151	1,153
1	1,043	1,202	1,263	1,241	1,222	1,179	1,196

Snohomish County/OFM Projections

Another projection, based on Office of Financial Management (OFM) population projections for Snohomish County, was also produced. Using the OFM/County data and the District's corresponding actual enrollment, the District's enrollment averaged 1.77% of the OFM/County Population estimates. Further, District enrollment averaged 13.5% of the OFM/County population residing within Mukilteo School District boundaries. Assuming that these average percentages remain constant, the District's enrollment would grow as shown in Table 4.2.

Table 4.2 – Projected Enrollment - 2044 OFM Estimates*

Grade Level	Actual 2020	% MSD Population		% County Population	
		2027	2044	2027	2044
Elementary	6,565	7,255	9,237	7,278	9,010
Middle School	3,599	3,977	5,064	3,990	4,939
High School	4,454	4,922	6,267	4,938	6,113
Total	14,618	16,154	20,568	16,206	20,062

*Assumes that percentage per grade span will remain constant through 2044.

Note: Snohomish County Planning and Development Services provided the underlying data for the 2044 projections.

For the purposes of this Capital Facilities Plan, the District relies on the Modified Cohort Survival Projections as this projection provides a more detailed grade-specific projection which, when

combined with district-specific new housing development trends, allows for better planning across the six-year period.

SECTION 5 - CAPITAL FACILITIES NEEDS

Projected available student capacity is derived by subtracting projected student enrollment from existing student capacity (excluding relocatable classrooms) for each of the six years in the forecast period (2022-2027). A long-term projection of un-housed students and facilities needs is shown in Table 5.1. On February 11, 2020 voters approved a six-year, \$240 million capital bond. Planned new capacity improvements included in that bond are represented below, through 2026. The projects include new elementary classroom capacity from projects at three existing elementary schools and potential additional capacity at one existing high school. The District considers relocatable (portable) classrooms to be temporary/interim space and bases its new capital facilities needs from permanent capacity. (Information on relocatable classrooms and interim capacity can be found in Table 3.2.) However, relocatable classrooms are a part of the District's interim capacity solution to ensure our ability to serve enrollment growth from new development in between construction and capital bond timelines. Table 5.1 does not include relocatable classrooms that may be added or adjusted during the six-year planning period.

TABLE 5.1 – School Enrollment & Classroom Capacity Needs

	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27	2027-28

Does not include interim/portable capacity

SECTION 6 – SIX-YEAR FINANCING PLAN

Planned Improvements

In the event that planned construction projects do not fully address space needs for student growth and a reduction in interim student housing, or that voter approved funding could not be secured, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options
- Changes in the instructional model
- Grade configuration change
- Purchasing portable classrooms
- Busing
- Increased class sizes; or
- A modified school-year calendar

The six-year financing plan includes projects adding elementary and high school classroom capacity. In addition, the District may continue to add and use portable classrooms as part of the capacity solution. It is anticipated that additional interim capacity via portable classrooms will be needed until additional permanent capacity beyond what was included in the voter approved February 2020 capital bond measure can be determined.

Funding for planned improvements is typically secured from several sources including voter approved bonds, state school construction assistance matching funds, and impact fees. Each of these funding sources is discussed in greater detail below.

Financing for Planned Improvements

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes.

Capital Projects Levy

The District has passed a six-year capital projects levy that runs through 2028. Capital project levy dollars will be dedicated to additional modernization and major system upgrades or modernization of buildings and grounds.

State School Construction Assistance Program (SCAP)

State School Construction Assistance Program (SCAP) funds come from the Common School Construction Fund. Bonds are sold on behalf of the fund, and then retired from revenues accruing predominantly from the sale of renewable resources (i.e., timber) from State school lands set aside by the Enabling Act of 1889. If these sources are insufficient to meet needs, the Legislature can appropriate funds or the Superintendent of Public Instruction can prioritize projects for funding.

School districts may qualify for SCAP funds for specific capital projects based on a qualification and criterion system. The District is currently eligible for SCAP funds for capital projects at the secondary school level and for some modernization/new in lieu at the elementary level. State match does not cover all costs of construction and each district has a different matching ratio based on the state's formula. Because SCAP funds are received at the end of a project, it is necessary for school districts

to plan to finance the complete project with local funds. Site acquisition and site improvements are not eligible to receive matching funds.

K-3 Class Size Reduction Grants

The 2015 Washington State Legislature provided limited funding for the construction of elementary classrooms to assist in the effort to provide space for full day kindergarten and to lower class sizes in K-3 grades. The District applied for this grant and a 24 classroom need was determined, but grant funds were not awarded.

Land Sales

The District currently has no property for sale.

Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

The six-year financing plan shown on Table 6.1 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include the voter-approved 2022 capital projects levy, funds from a voter approved capital bond measure in February 2020, impact fees and SCAP ("state match") funds.

SECTION 7 - SCHOOL IMPACT FEES

The Washington State Growth Management Act (GMA) authorizes cities and counties that plan under RCW 36.70A.040 to collect impact fees to supplement funding of additional system improvements (e.g., public facilities including schools) needed to accommodate growth from new development. Impact fees cannot be used for the operation, maintenance, repair, alteration, or replacement of existing capital facilities used to meet existing service demands.

School Impact Fees

The Snohomish County General Policy Plan sets certain conditions for school districts wishing to assess impact fees:

- The district must provide support data including an explanation of the calculation methodology, a description of key variables and their computation, and definitions and sources of data for all inputs into the fee calculation.
- Such data must be accurate, reliable and statistically valid.
- Data must reflect projected costs in the six-year financing plan.
- Data in the proposed impact fee schedule must reflect expected student generation rates from the following residential unit types:
 1. single family
 2. multi-family/1-bedroom or less; and
 3. multi-family/2-bedroom or more which includes townhomes and duplexes.

The Snohomish County impact fee program requires school districts to prepare and adopt Capital Facilities Plans meeting the specifications of the GMA. Impact fees are calculated in accordance with the formula, which are based on projected facility costs necessitated by new growth and are contained in the District's CFP.

Methodology and Variables Used to Calculate School Impact Fees

Impact fees have been calculated utilizing the formula in the Snohomish County Impact Fee Ordinance (SCC 30.66C). The resulting figures are based on the District's cost per dwelling unit to purchase land for school sites, make site improvements, construct schools and purchase/install relocatable facilities (portables) that add capacity needed to serve new development. As required under the GMA, credits have also been applied in the formula to account for SCAP ("state match") funds to be reimbursed to the District and for projected future property taxes to be paid by the dwelling unit.

Site Acquisition Cost Element

1. Site Size – Acreage needed to accommodate each planned project.
2. Average Land Cost Per Acre – based on current estimates of land costs within the District.
3. Facility Design Capacity – number of students each planned project is designed to accommodate.
4. Student Factor – Number of students generated by each housing type – in this case, single family dwellings and multi-family dwellings. A student generation rate study was conducted to determine the updated generation rate for this CFP. See Appendix A for the study information. Current student generation rates for the district are shown below:

Table 7.1 – Student Generation Rates*

Grade Span	Single Family	Multi-Family (1bdrm/less)	Multi-Family (2+bedroom)
Elementary (K-5)	.102	.043	.370
Middle School (6-8)	.038	.005	.182
High School (9-12)	.055	.003	.182
Total (K-12)	.195	.051	.734

*Full study info included in Appendices

School Construction Cost Variables

1. Current Facility Square Footage – used in combination with the “Existing Relocatable Square Footage” to apportion the impact fee amounts between permanent and interim capacity figures
2. Estimated Facility Construction Cost – based on planned costs or on actual costs of recently constructed schools. Facility construction costs also include the off-site development costs. Costs vary with each site and may include such items as sewer line extension, water lines, off-site road and frontage improvements. Off-site development costs are not covered by State Match Funds. Off-site development costs vary and can represent 10% or more of the total building construction cost.

Relocatable Facilities Cost Element

Impact fees may be collected to allow acquisition of relocatable classrooms needed to serve growth on an interim basis. The cost allocated to new development must be growth related and must be in proportion to the current permanent and interim space ratios in the District.

1. Cost Per Unit – The average cost for a relocatable classroom.
2. Relocatable Facilities Cost – The total number of needed units multiplied by the cost per unit.

School Construction Assistance Credit Variables

1. Construction Cost Allocation – Currently \$246.83 for new construction projects approved in July of 2022.
2. State Funding Assistance Percentage – Percentage of School Construction Assistance Program funds from the state that the District expects to receive. For new construction and additions, the District is currently eligible to receive a maximum state match of 50.86% of *eligible* costs (as defined by the state).

Tax Credit Variables

1. Interest Rate (20-year General Obligation Bond) – interest rate of return on a 20-year General Obligation Bond derived from the Bond Buyer index. Because of current market volatility, the District is using the February 2022 average interest rate of 2.45%
2. Bond Levy Rate – The current bond levy rate is \$.90 per \$1,000 in assessed value.
3. Average Assessed Value – based on estimates made by the County’s Planning and Development Services Department utilizing information from the County Assessor’s files. The current average assessed value is \$622,683 for single family dwelling units; \$203,889 for one-bedroom multi-family dwelling units; and \$287,840 for two or more bedroom multi-family dwelling units.

Proposed Mukilteo School District Impact Fee Schedule

Using the variables and formula described, impact fees proposed for the District are summarized below. See Appendix B for the impact fee calculation detail. The impact fees below for Mukilteo School District reflect Single Family, Multi-Family 1 bedroom, and Multi-Family 2+bedroom dwelling units, including Townhomes and Duplexes.

Table 7.2 – School Impact Fees*

Housing Type	Impact Fee Per Unit
Single Family	\$1,121
Multi-Family (1 bedroom or less)	\$700
Multi-Family (2+ bedroom; Townhomes; Duplexes)	\$11,846

**Table 7.2 reflects a 50% adjustment to the calculated fee as required by local ordinances.*

APPENDIX A

STUDENT GENERATION RATE STUDY

MEMORANDUM

To: Karen Mooseker Executive Director, District Support Services Mukilteo School District	Date: April 22, 2022
From: Tyler Vick Managing Director Benjamin Maloney Demographer/Data Analyst	Project No.: F2133.01.003

Re: Student Generation Report— Mukilteo School District

At the request of the Mukilteo School District (District/MSD), FLO Analytics (FLO) has prepared an analysis of the student generation rates (SGRs) as a result of recent residential construction within the district. This document details the methodology FLO used to create the SGRs for MSD: an analysis of recent single-family (SF) and multifamily (MF) construction; and SGRs for SF, 0–1 bedroom (BR) MF units, and 2+ BR MF units. For the analysis, FLO considered new SF construction between 2016 and 2021, and new MF construction between 2016 and 2021. The findings are presented per individual grade and per grade group.

METHODS

The SGR analysis is based on two data sources: (1) January 2016 to December 2021 residential developments from the Snohomish County Assessor's Office (SCAO) and (2) October 2021 student enrollment provided by the District. The residential development data include information regarding the building size, room count, assessed value, and year built, along with a significant amount of other structural information. Data that contained incomplete records (e.g., no stated location) or did not coincide with a remote visual inspection (i.e., Google Earth) were removed from the final database prior to the calculations. Senior housing was also not included in the analysis. Additional investigation into the residential data from the SCAO necessitated the removal of one MF project that was erroneously listed as having been completed between 2016 and 2021. This project is an apartment complex that was not completed as of December 2021. The final data were then joined to Snohomish County tax parcels to provide a spatial understanding of recent residential construction trends.

According to data obtained from the SCAO, residential construction activity has continued at a brisk pace with 1,200 SF units completed between 2016 and 2021 and 11 MF projects completed between 2016 and 2021. While the majority of the SF construction consisted of units classified as "Single Family Residence – Condominium Detached" (499 units), a variety of units with other SF use codes were also constructed, including duplexes, common wall condominiums, and manufactured homes (owned and leased). MF development ranged from three and four family residences to a 300+ unit construction project. About 76 percent (1,216 units) of these new MF units were 2+ BR units, while the remainder (391 units) were 0–1 BR units.

R:\F2133.01 Mukilteo School District\Documents\003_2022.04.22 Student Generation Report\Mukilteo SD Student Generation Report 2022.docx

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 2

All students (grades kindergarten [K] through 12) in the October 1, 2021, Student Information System (SIS) were geocoded; however, the analysis considered only students that reside within the district boundary. Any students geocoded to locations not within a parcel (e.g., along a street right-of-way) were relocated within the parcel corresponding to the student's address. The student address points were then compared to the 2016–2021 residential construction data. These two data sets were spatially joined to create a record that indicates the development, the number of students living at a location, and all pertinent attributes for this analysis, including current grade level. With this combination of information, SGRs were calculated for SF housing, 0–1 BR MF units, and 2+ BR MF units as detailed in the results below.

RESULTS

Single-Family Residential Unit Rates

All new SF residential units (constructed between 2016 and 2021) from the SCAO were compared with the District's October 2021 SIS, and the number of students at each grade level living in those units was determined. The 1,200 SF units were compared to the 14,604 students enrolled with the District, and the following matches were found by grade level(s):

Table 1. Rate of Matches by Grade for Single-Family Units

Grade	Matches	Rate
K	31	0.026
1	18	0.015
2	20	0.017
3	21	0.018
4	22	0.018
5	10	0.008
6	26	0.022
7	13	0.011
8	6	0.005
9	22	0.018

6-8	45	0.038
9-12	66	0.055
K-12	233	0.194

Multifamily Developments

While SF data are mostly accounted for in the SCAO data, there are significant data gaps with regard to MF construction. For instance, the SCAO MF development data do not include the number of bedrooms in the building and parcels may be layered on top of one another. FLO performed additional research to determine the number of MF units and breakdown of units by bedroom count, as well as to remove all duplicate parcels. To aid this effort, FLO received additional SIS attributes from the District including the number or letter identifier of the MF units in which students reside.

Karen Mooseker
April 22, 2022

Project No. F2133.01.003
Page 3

FLO reached out to the building management at four projects constructed between January 2016 and December 2021 to ascertain the bedroom count of each unit that housed students. Information given to the building management consisted of only the unit identifier; no identifying information was disclosed. FLO received bedroom count information for Puget Park Apartments and Madison Way Apartments. Despite numerous attempts, no bedroom information could be received from Helm Apartments or Manor Way Apartments. Based on trends within and surrounding the district, FLO assumed 90 percent of the students would reside within a 2+ BR unit with the remaining 10 percent residing within a 0–1 BR unit. Other apartments (triplex, fourplex units, and one garden style apartment) were assessed visually using Google Earth and SCAO data.

Multifamily 0–1 BR Rates

FLO calculated the MF 0–1 BR SGRs by comparing data on 0–1 BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. As of this writing, FLO estimates that 391 0–1 BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

Table 2. Rate of Matches by Grade for Multifamily 0–1 BR Units

Page 4

Multifamily 2+ BR Rates

FLO calculated the MF 2+ BR SGRs by comparing data on 2+ BR MF units with the District's October 2021 SIS and determining the number of students at each grade level living in those units. It is estimated that 1,216 2+ BR units were constructed from 2016 to 2021. Matches to current students are indicated in the table below.

Appendix B.....School Impact Fee Calculations

Appendix C.....Student Generation Rates

CHAPTER 1 -- INTRODUCTION

Purpose of the Capital Facilities Plan

The Monroe School District (the “District”) has prepared this Capital Facilities Plan (“CFP”) to assess the facilities needed to accommodate projected student enrollment at acceptable levels of service, as well as a more detailed schedule and financing program for capital improvements, over the next six years (2022-2027). The CFP is intended to be shared with the City of Monroe and Snohomish County. In accordance with the Growth Management Act, adopted Snohomish County policies, and local ordinances governing school impacts, this CFP contains the following required elements:

- Future enrollment forecasts for each grade span (elementary schools, middle schools, and high schools).
- An inventory of existing capital facilities owned by the District, showing the locations and capacities of the facilities.
- A forecast of the future needs for capital facilities and school sites.
- The proposed capacities of expanded or new capital facilities.
- A six-year plan for financing capital facilities within projected funding capacities, which clearly identifies sources of public money for such purposes. The financing plan separates projects and portions of projects which add capacity from those which do not, since the latter are generally not appropriate for impact fee funding.
- As applicable, a calculation of impact fees to be assessed and support data substantiating said fees.

In developing this CFP, the District followed the following guidelines set forth in Appendix F of Snohomish County's General Policy Plan:

- Districts should use information from recognized sources, such as the U.S. Census or the Puget Sound Regional Council. School districts may generate their own data if it is derived through statistically reliable methodologies. Information must not be inconsistent with Office of Financial Management (OFM) population forecasts. Student generation rates must be independently calculated by each school district.
- The CFP must comply with the GMA.
- The methodology used to calculate impact fees must comply with Chapter 82.02 RCW. In the event that impact fees are not available due to action by the state, county or cities within the District, the District in a future CFP update must identify alternative funding sources to replace the intended impact fee funding.

Snohomish County’s Countywide Planning Policies direct jurisdictions in Snohomish County to “ensure the availability of sufficient land and services for future K-20 school needs.” Policy ED-11. The District appreciates any opportunity for cooperative planning efforts with its jurisdictions.

Overview of the Monroe School District

The Monroe School District is located in the southeastern portion of Snohomish County. The District covers approximately 82 square miles and encompasses the City of Monroe and portions of unincorporated Snohomish County.

The District currently serves a student population of 5,488 (October 1, 2021, adjusted enrollment) with five elementary school campuses, two middle schools, and one high school. Leaders in Learning, an individualized secondary program, is also offered as a standalone program at the Monroe High School campus. Sky Valley Education Center, an individualized program for students in grades K-12 that provides for an alternative learning environment, is housed in a former middle school facility. Sky Valley Education Center and Leaders in Learning student enrollment figures are included in both the District and OSPI figures. Elementary schools provide educational programs for students in kindergarten through grade five. Middle schools serve grades six through eight and the high school grades nine through twelve. Leaders in Learning serves grades nine through twelve.

The District provides fiscal and administrative support for the Youth Re-Engagement program housed off-site at Everett Community College (EvCC) in Everett, Washington. It also provides a graduate retrieval program through Shoreline Community College (SCC). These programs do not use District facilities and are therefore the enrollment needs are not included when determining the District's facility needs. The District will discontinue the fiscal and administrative support relationships with EvCC and SCC at the end of the 2021-22 school year. The District previously operated WAVA High School, a virtual high school for students in grades 9-12. The District recently discontinued the WAVA program. The WAVA program did not use District facilities. The District has modified its past enrollment figures to exclude actual enrollment for the WAVA High School, the SCC graduate retrieval program, and EvCC U-3 program enrollment figures from the District's FTE enrollment figures.

Significant Issues Related To Facility Planning In the Monroe School District

The most significant issues facing the Monroe School District in terms of providing classroom capacity to accommodate projected demands are aging school facilities, the rate of student growth, the availability and affordability of suitable school sites, including perkable soil for septic systems, access to water and the geographic constraints associated with the increased student population. In addition, enrollment fluctuations due to the COVID-19 pandemic make it difficult to predict the rate at which enrollment may return to pre-pandemic levels as more students return to in-person learning.

The District is near completion of projects approved by the voters in April 2015. These projects helped address some issues with aging school facilities and capacity needs. The District is in the planning stages for a proposed future bond measure. It is anticipated that a future bond proposal will address modernization and expansion of school facilities.

MAP – MONROE SCHOOL DISTRICT

CHAPTER 2 – EDUCATIONAL PROGRAM STANDARDS

School facility and student capacity needs are dictated by the types and amounts of space required to accommodate the District's adopted educational program. The educational program standards which typically drive facility space needs include grade configuration, optimum facility size, class size, educational program offerings, classroom utilization and scheduling requirements, and use of relocatable classroom facilities (portables).

In addition to factors which affect the amount of space required, government mandates and community expectations affect how classroom space is used. Traditional educational programs offered by school districts are often supplemented by non-traditional or special programs such as special education, bilingual education, remediation programs, migrant education, alcohol and drug education, AIDS education, preschool, extended day kindergarten and daycare programs, computer labs, music programs, etc. These special or nontraditional educational programs have a significant impact on the available student capacity of school facilities.

The District's implementation, now complete, of required full-day kindergarten and reduced K-3 class size affected school capacity and educational program standards.

Special programs offered by the District at specific school sites include, but are not limited to:

- Special education pre-school
- Special education - resource, moderate and profound, behavioral and behavioral support
- ELL/ESL
- Title I LAP
- Drug and Alcohol Education
- Community Schools
- Vocational and Technical Education
- Technology Education
- Music
- Day Care - before and after school
- Computer Labs
- Birth to Three Programs
- Excel
- Adopt-A-Stream
- Outdoor Education
- Horticulture
- Multi-age classrooms
- Special Education 18 to 21 year old transitional program

Variations in student capacity among schools are often a result of what special or nontraditional programs are offered at specific schools. These special programs require classroom space which can reduce the permanent capacity of some of the buildings housing these programs. Some students, for example, leave their regular classroom for a short period of time to receive instruction

in these special programs. Newer schools within the District have been designed to accommodate most of these programs. However, older schools often require space modifications to accommodate special programs, and in some circumstances, these modifications may reduce the overall classroom capacities of the buildings.

District educational program standards will undoubtedly change in the future as a result of changes in the program year, special programs, class sizes, grade span configurations, and use of new technology, as well as other physical aspects of school facilities. The school capacity inventory will be reviewed periodically and adjusted for any changes to the educational program standards. These changes will also be reflected in future updates of this Capital Facilities Plan.

The District educational program standards which directly affect school capacity are outlined below for the elementary, middle, and high school grade levels.

EDUCATIONAL PROGRAM STANDARDS FOR ELEMENTARY SCHOOLS

- Class size for grades K-3 should not exceed 20 students.
- Class size for grades 4-5 should not exceed 26 students.
- All students will be provided music instruction in a separate classroom.
- Optimum design capacity for new elementary schools is 500-550 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

EDUCATIONAL PROGRAM STANDARDS FOR MIDDLE AND HIGH SCHOOLS

- Class size for middle school grades should not exceed 28 students.
- Class size for high school grades should not exceed 28 students.

As a result of scheduling conflicts for student programs, the need for specialized rooms for certain programs, and the need for teachers to have a work space during planning periods, it is not possible to achieve 100% utilization of all regular teaching stations throughout the day.

Identified students will also be provided other nontraditional educational opportunities in classrooms designated as follows: Resource Rooms (i.e. computer labs, study rooms); Special Education Classrooms; and Program Specific Classrooms (i.e. music, drama, art, science, family and consumer science, physical education, technology education).

Desired design capacity for new middle schools is 800 to 850 students. However, actual capacity of individual schools may vary depending on the educational programs offered and/or geographic area served.

Desired design capacity for new comprehensive high schools is 1,600-1800 students. However, actual capacity of individual schools may vary depending on the educational programs offered.

MINIMUM EDUCATIONAL SERVICE STANDARDS

The District will evaluate student housing levels based on the District as a whole system and not on a school by school or site by site basis. This may result in portable classrooms being used as interim housing, attendance boundary changes or other program changes to balance student housing across the system as a whole. A boundary change or a significant programmatic change would be made by the Board of Directors following appropriate public review and comment.

The District has set minimum educational service standards based on several criteria. The standards in the 2022 CFP are adjusted to reflect implementation of reduced K-3 class size and other elements of District program delivery. Exceeding these minimum standards will trigger significant changes in program delivery. If there are more than 24 students per classroom in a majority of K-3 classrooms, more than 26 students per classroom in the majority of 4-5 classrooms, or more than 30 students in a majority of grade 6-12 classrooms, the minimum standards have not been met. For purposes of this determination, the term “classroom” does not include special education classrooms or special program classrooms (i.e. computer labs, art rooms, chorus and band rooms, spaces used for physical education and other special program areas). Furthermore, the term “classroom” does not apply to special programs or activities that may occur in a regular classroom. The minimum educational standard is just that, a minimum, and not the desired or accepted operating standard.

In summary, the District’s “minimum level of service” is that there are no more than 26 students in the majority of grade K-4 classrooms and no more than 30 students in the majority of grade 5-12 classrooms. For the school years of 2019-20 and 2020-21, the District’s compliance with the minimum level of service was as follows:

2019-20 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	27	20.33	30	19.73	30	21.13

* The District determines the reported service level by adding the number of students at each grade level and dividing that number by the number of teaching stations.

2020-21 School Year						
LOS Standard	MINIMUM LOS# Elementary	REPORTED LOS Elementary	MINIMUM LOS Middle	REPORTED LOS Middle	MINIMUM LOS High	REPORTED LOS High
	27	17.73	30	19.05	30	20.45

* The District determines the reported service level by adding the number of students at each grade level and dividing that number by the number of teaching stations.

CHAPTER 3 – CAPITAL FACILITIES INVENTORY

Under the Growth Management Act public entities are required to inventory capital facilities used to serve existing development. The purpose of the facilities inventory is to establish a baseline for determining what facilities will be required to accommodate future demand (student enrollment) at acceptable or established levels of service. This chapter provides an inventory of capital facilities owned and operated by the District including schools, relocatable classrooms (portables), undeveloped land and support facilities. School facility capacity was inventoried based on the space required to accommodate the District's adopted educational program standards (see Chapter 2). A map showing locations of District facilities is provided on page 3.

SCHOOLS

The Monroe School District currently operates five elementary school campuses serving grades K-5 including a portion of Wagner Center, formerly Frank Wagner Elementary East as a part of the Frank Wagner Elementary complex, two middle schools serving grades 6-8 and one high school serving grades 9-12. Leaders in Learning, an individualized secondary program is offered in portables located on the Monroe High School campus. Sky Valley Education Center, a grades 1-12 individualized parent partnership program is housed in the old Monroe Middle School site. Pre-kindergarten students are served in programs at both Frylands Elementary and Chain Lake Elementary Schools.

The U3 Program and a graduate retrieval program through Shoreline Community College do not require District housing.

School capacity is determined based on the number of teaching stations within each building and the space requirements of the District's adopted educational program. The District uses this capacity calculation to establish the District's baseline capacity and determine future capacity needs based on projected student enrollment. The District's school facility inventory is summarized in Tables 1, 2, and 3.

Table 1 - Elementary School Capacity Inventory

	Site Size (acres)	Building Area (Sq. Ft.)	Teaching Stations	Program Student Capacity	Year Built or Last Remodel	Potential for Expansion
Elementary School						
Chain Lake	14.4	46,207	21	440	1990	yes**
Frank Wagner	10.21	68,408	34	714	2018	yes
Fryelands	7.09	54,074	20	420	2005	no
Maltby	10	50,230	24	504	2005	no*
Salem Woods	13.78	50,545	25	524	2018	yes
SVEC (part) ***	6	40,905	14	280	1980	no
Totals	61.48	310,369	138	2,882		

* Septic system capacity limits expansion

** Holding tank capacity limits expansion potential

*** Sky Valley Ed Center capacities prorated by daily usage.

Table 2 - Middle School Capacity Inventory

	Site Size (acres)	Building Area (Sq. Ft.)	Teaching Stations	Program Student Capacity*	Year Built or Last Remodel	Potential for Expansion
Middle School						
Park Place Middle	19.4	135,684	41	953	2018	yes
Hidden River	20	84,341	25	581	2021	yes
SVEC (part) **		22,652	8	220	1980	no
Totals	39.4	242,677	74	1,754		

* Calculated at 83% room utilization

** Sky Valley Ed Center capacities prorated by daily usage.

Table 3 - High School Capacity Inventory

	Site Size (acres)	Building Area (Sq. Ft.)	Teaching Stations	Program Student Capacity*	Year Built or Remodel	Potential for Expansion
High School						
Monroe HS	33	209,432	72	1,815	2005	yes
Leaders In Learning	**	14,250	7	176	1980	yes
SVEC (part) ***		21,440	7	209	1980	no
Totals	33	245,122	86	2,200		

* Calculated at 90% room utilization

** Leaders in Learning located in a portion of the Wagner Center

*** Sky Valley Ed Center capacities prorated by daily usage.

RELOCATABLE CLASSROOM FACILITIES (PORTABLES)

Relocatable classroom facilities (portables) are used as interim classroom space to house students until construction of permanent classroom facilities takes place. Therefore, these facilities are not included in the school capacity calculations provided in Tables 1-3 above. The District uses 30 portables at various school sites throughout the District providing interim capacity and administrative support needs

Table 4 – Portable Classroom Inventory

	Number of Portables	Capacity	Building Area (Sq. Ft.)
Chain Lake Elementary	6	132	5,460
Salem Woods Elementary	3	66	2,688
Hidden River Middle	2	44	1,536
Sky Valley Ed. Ctr	2	0	1,536
Monroe High School	10*	186	7,560
Preschool/Head Start	3	40	2,679
Old District Office	2	0	2,504
Transportation	2	0	952
	30	468	24,915

* Two portables for Life Skills; four portables for Leaders in Learning.

The age and condition of some of the portables is such that they can no longer be moved to another site to relieve over-crowding. They simply would not be able to survive another move. The District continues to survey its portables to determine how many can be moved to another site without damaging the portable beyond use. However, several of the portables have been purchased during the last ten years. These portables can and will be moved from time to time to meet instructional needs and to provide interim student housing, as the need arises.

SUPPORT FACILITIES

In addition to schools, the District owns and operates additional facilities which provide operational support functions to the schools. An inventory of these facilities is provided in Table 5.

Table 5 - Inventory of Support Facilities

Facility Name	Site Size (Acres)	Building Area (sq ft)
Old District Admin Office and Warehouse	3.5	21,584
District Administration Office	2.48	31,151
Maintenance Shops	0.2	5,459
Transportation	3.4	6,612
Totals	9.58	64,806

LAND INVENTORY

The District owns one undeveloped parcel of 14.5 acres adjacent to Chain Lake Elementary. The District had intended to build a middle school at this site. However, there are substantial wetlands and buffer zone requirements. The site cannot be used for a middle school. There appears to be sufficient usable space to add a classroom addition to Chain Lake Elementary School.

The District purchased a 13.2 acre piece of property on the Old Owen corridor in 2007. The property will be used for a future elementary school.

The District owns approximately 13 acres located on West Columbia Street in the City of Monroe commonly known as Memorial Stadium/Marshall Fields. The District is considering using the site for future expansion or the potential surplus and sale of this Property.

The District owns other sites which are unsuitable for school buildings inasmuch as they do not have the acreage necessary to support even an elementary school. They are: (1) A 2.7 acre piece in the Lake Fontal area donated to the District in the early 1900's; and (2) 2.54 acres within a residential area of Monroe which is currently being used as the Park Place Softball Field. The District also owns a 35 acre parcel off of Echo Falls Road in Maltby that was deeded to the District by two families. It was originally used as an outdoor education site. The property is composed primarily of wetlands and beaver ponds, with approximately two acres of buildable land, and has limited access issue.

A 31.6 acre site deeded to the District by the BPA is located in the Sultan School District.

The District will need additional schools in the area north of Highway 2 to meet long-range needs associated an increasing population in this area. Sites for schools north of Highway 2 should be purchased while property may still be available. The District also may need to acquire property for elementary expansion needs.

CHAPTER 4 – STUDENT ENROLLMENT HISTORY AND PROJECTIONS

Facility needs are determined in part by evaluating recent trends in adjusted student enrollment. The District's October 2021 adjusted enrollment was 5,488. This figure does not include students participating in U-3 or CEO/LCN programs¹ because those programs do not use District facilities. It also does not include out of district special education students. Future enrollment in these programs is expected to remain steady over the next six years. Notably, the OSPI enrollment reports and cohort projections incorporate enrollment data for both students enrolled in programs using District facilities and not using District facilities. (See Appendix A.) For purposes of this CFP and determining facility needs and anticipated enrollment projections, the District uses enrollment data for only those in-District students enrolled in programs using District facilities.

RECENT TRENDS - STUDENT ENROLLMENT IN DISTRICT FACILITIES

In looking at recent trends and for purposes of comparing past enrollment to future projections, the District treated Kindergarten enrollment as a 1.0 FTE since the District has implemented full-day Kindergarten. This provides a one to one comparison from year to year. Again, the recent enrollment trends consider only those students enrolled in District facilities. Over the previous six years, the District's enrollment peaked in 2016-17 after several years of growth but has declined in the last three years, with the last two years of enrollment heavily affected by enrollment fluctuations due to the COVID-19 pandemic and uncertainties with regard to in-person learning. Table 6 shows the actual student enrollment in District facilities during the years 2014-2021.

**Table 6- Total Student Enrollment
Monroe School District 2014-2021
(Adjusted FTE in District Facilities)**

Enrollment by Grade Span	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
Elementary (K-5)	2,893	2,922	2,930	2,889	2,857	2,806	2,447	2,411
Middle School (6-8)	1,462	1,450	1,457	1,422	1,464	1,460	1,410	1,298
High School (9-12)	1,942	1,938	1,934	1,941	1,815	1,817	1,759	1,779
TOTAL	6,297	6,310	6,321	6,252	6,136	6,083	5,616	5,488

¹ U3 and CEO/LCN programs are both off site credit retrieval programs to allow student to complete their high school education. These are provided by two separate community colleges in cooperation with the District. Students are enrolled through the District in cooperation with the college but do not attend at the Districts facilities.

PROJECTED STUDENT ENROLLMENT (2022-2027)

Enrollment in the District, after several years of an upward trend that peaked in the 2016-17 school year, marginally declined in the immediate years thereafter and then dropped further during the COVID-19 pandemic. K-12 enrollment in Snohomish County is growing but is concentrated currently in other areas. However, new housing development planned within the District boundaries, as well as some enrollment stabilization post-pandemic, is expected to bring new enrollment growth at the K-5 level over the six year planning period.

Two enrollment forecasts were conducted for the District: a modified cohort survival projection prepared by a professional demographer and an estimate based upon County population as provided by OFM (“ratio method”).

Enrollment projections often rely on the cohort survival methodology as a base. That methodology compares enrollment at a particular grade in a specific year, to the enrollment at the previous grade from the prior year. For example, enrollment at the second grade is compared to the previous year’s first grade enrollment. The ratio of these two numbers (second grade enrollment divided by first grade enrollment) creates a “cohort survival ratio” providing a summary measure of the in-and-out migration that has occurred over the course of a year. This ratio can be calculated for each grade level. Once these ratios have been established over a period of years they can be averaged and/or weighted to predict the enrollment at each grade. At the kindergarten level, enrollment is compared to the county births from five years prior to estimate a “birth-to-k” ratio. This ratio, averaged over several years, provides a method for predicting what proportion of the birth cohort will enroll at the kindergarten level.

Cohort survival is a purely mathematical method, which assumes that future enrollment patterns will be similar to past enrollment patterns. It makes no assumptions about what is causing enrollment gains or losses and can be easily applied to any enrollment history. This concept is particularly striking when considering the COVID-19 pandemic and its anomalous impact on school enrollments nationwide. As a result, cohort survival can produce large forecast errors because it does not consider possible changes in demographic trends. New housing, especially, can produce enrollment gains that might not otherwise be predicted from past trends. Or, alternatively, a district may lose market share to private or other public schools. It is also possible that a slowdown in population and housing growth will dampen enrollment gains.

The modified cohort survival methodology combines the cohort survival method with information about market share gains and losses from private schools, information about population growth from new housing construction, and information about regional trends, including the post-pandemic shift in student learning. The population/housing growth factor reflects projected changes in the housing market and/or in the assumptions about overall population growth within the District’s boundary area. The enrollment derived from the cohort model is adjusted upward or downward to account for expected shifts in the market for new homes, to account for changes in the growth of regional school age populations, and to account for projected changes in the district population.

The modified cohort survival projection, with its analysis of historical patterns and District-specific demographic and market data, best reflects anticipated enrollment in the District. Those projections

show an expected total enrollment of 5,746, or increase of 4.7%, by 2027. Enrollment after 2027 is expected to continue to grow. See *Appendix A* for more detail.

OFM population-based enrollment projections were estimated for the District using OFM population forecasts for the County. The County provided the District with the estimated total population in the District by year. In 2020, the District's housed student enrollment constituted approximately 13.7% of the total population in the District. Assuming that between 2022 and 2027, the District's enrollment will continue to constitute 13.7% of the District's total population and using OFM/County data, OFM/County methodology projects a total enrollment of 6,006 students in District facilities in 2027.

**Table 7- Projected Student Enrollment
2022-2027
(FTE in District Facilities)**

Projection	Oct. 2021*	2022	2023	2024	2025	2026	2027	Change 2021-27	Percent Change 2021-27
OFM/County	5,488	5,574	5,660	5,746	5,832	5,918	6,006	518	9.44%
Modified Cohort/District	5,488	5,555	5,586	5,714	5,680	5,665	5,746	258	4.7%

*Actual adjusted FTE in District facilities, October 2021

For the reasons discussed above, the District is using the modified cohort survival projections for purposes of planning for the District's facility needs during the six years of this plan period. Future updates to the Plan may revisit this issue.

PROJECTED STUDENT ENROLLMENT (POST-2027)

Student enrollment projections beyond 2027 are highly speculative. Using OFM/County data as a base, the District projects a 2044 student FTE population of 6,443. This is based on the OFM/County data showing that, for the year 2020, the District's enrollment constituted approximately 13.7% of total District population and an assumption that this percentage will remain constant through 2044. See discussion above. The total enrollment estimate was broken down by grade span to evaluate long-term needs for capital facilities.

Projected enrollment by grade span for the year 2044 is provided in Table 8. Again, these estimates are highly speculative and are used only for general planning purposes.

Table 8
Projected Student Enrollment
2044

Grade Span	FTE Enrollment – October 2021	Projected Enrollment 2044*
Elementary (K-5)	2,411	2,830
Middle School (6-8)	1,298	1,524
High School (9-12)	1,779	2,089
TOTAL (K-12)	5,488	6,443

*Assumes average percentage per grade span remains constant between 2021 and 2044.

Note: Snohomish County Planning and Development Service provided the underlying data for the 2044 projections.

CHAPTER 5 – PROJECTED FACILITY NEEDS

NEAR-TERM FACILITY NEEDS (THROUGH 2027)

Current enrollment at each grade level is identified in Table 6 which provides the actual enrollment in District facilities as of October 1, 2021. *Projected* available student capacity was derived by subtracting projected FTE student enrollment from existing October 2021 school capacity (Tables 1-3). It is not the District's policy to include portable classroom units when determining future capital facility needs; therefore interim capacity provided by portables is not included².

To determine future facility needs, existing school program capacity was compared to projected enrollment throughout the six-year forecast period. Without the consideration of portables, the District currently has capacity available at all grade levels (see Table 11). Table 9 assumes no new capacity construction through 2027. This factor is added in later (see Table 11).

Table 9 shows actual space needs and the portion of those needs that are “growth related” for the years 2022-2027.

Table 9
Available Student Capacity 2021-2027

Grade Span	2021 Enrollment	Existing Permanent Capacity [^]	2021 Surplus	2027 Enrollment	2027 Surplus/(Deficit)
K-5	2,411	2,882	471	2,935	(53)
6-8	1,298	1,745	447	1,203	542
9-12	1,779	2,200	421	1,608	592

[^]Existing as of Oct. 2021.

² Information on portables and interim capacity can be found in Table 4.

CHAPTER 6 – CAPITAL FACILITIES FINANCING PLAN

NEW SCHOOL CONSTRUCTION

In April 2015, the District’s voters passed a \$110.9 million bond issue for school construction to modernize and expand existing facilities and provide Districtwide improvements and major maintenance. The District is currently in the planning stages for an anticipated bond proposal to add capacity during the six years of this planning period, as further detailed herein. The identified future bond project proposals are subject to the District’s Board of Directors deciding, via resolution, to send the proposal to the voters for consideration. The school construction projects are summarized in Table 10. The primary source of funding for these projects is from the bond proceeds and supplemented by State School Construction Assistance funds and impact fees.

Elementary Level Projects

Approved 2015 Bond Projects:

Salem Woods Elementary: Add new capacity for 132 students, with associated spaces additions at Salem Woods Elementary, along with modernization of the existing facility to bring it up to current building code and educational standards. Project complete in 2018.

Frank Wagner Elementary: Add new capacity for 308 students and construct a new library and computer lab. Project complete in 2018.

Anticipated Future Bond Projects:

Salem Woods Elementary Phase II: Add new capacity for 88 students. Project projected to be complete in 2027 (assuming bond approval).

Frank Wagner Elementary: Add new capacity for 88 students as a part of modernization project. Project projected to be complete in 2027 (assuming bond approval).

Chain Lake Elementary: Add new capacity for 88 students plus an additional special education classroom as a part of modernization project. Project projected to be complete by or soon after the 2027-28 school year (assuming bond approval).

New Elementary No. 6: Construct a new 550 student elementary school to serve projected student enrollment growth. This project is projected to be outside of the six-year planning period of this Capital Facilities Plan (assuming bond approval).

Wagner Center Early Learning Center: Convert a portion of the Wagner Center to an early learning center to provide for a pre-kindergarten, ECAP, and/or other early learning programs. This project is in early consideration (assuming bond approval).

Middle School Level Projects

Approved 2015 Bond Projects:

Hidden River Middle: Construct Phase 3 Addition to the building, providing housing for an additional 139 students (including general classrooms and specialized classrooms for science, art, career/technology) and expanding the kitchen to serve the additional student load. Project complete in 2021.

Park Place Middle School: Perform complete renovation plus some demolition and replacement of older buildings to bring it up to meet current building codes and educational standards. Project includes replacement classrooms, new commons, kitchen and auxiliary gym, remodel of existing gym, and capacity addition for 23 students. Project complete in 2018.

High School Level Projects

Approved 2015 Bond Projects:

Monroe High School: Convert a currently unusable outdoor physical education space to all weather space. The net effect will be the addition of three new teaching stations. Project complete in 2018.

District Level Projects

Approved 2015 Bond Projects:

Four million dollars is allocated for a variety of facility improvements and major maintenance at all schools.

Anticipated Future Bond Projects:

Park Place, Building F: Under consideration for modernization. Specific use tbd.

Other:

The District may consider moving Sky Valley Education Center to a new location.

Portable Classrooms

The District may need to add portable classrooms to address unanticipated enrollment increases.

FINANCING FOR PLANNED IMPROVEMENTS

General Obligation Bonds

Bonds are typically used to fund construction of new schools and other capital improvement projects. A 60% voter approval is required to approve the issuance of bonds. Bonds are then retired through collection of property taxes.

The Monroe School District passed a capital improvements bond for \$10.8 million in 1987. Revenues from this bond were used to construct Frank Wagner Elementary, Chain Lake Elementary, additions to Park Place Middle School (former Monroe High School), new roofs and insulation at three schools, a play shed at Maltby Elementary, and other smaller projects. A bond was passed in 1996 for \$24 million. It was used for the construction of a new high school and Hidden River Middle School in the Maltby area, both of which opened in September 1999. It also funded several other projects. The District passed a successful bond issue in 2003 in the amount of \$21,852,000. These funds were used for the construction of Fryelands Elementary, additions to Hidden River Middle School and Monroe High School, remodeling

of Maltby Elementary School, new athletic facilities and technology upgrades. The projects were completed in 2005/2006. In April 2015, the District's voters approved a \$110.9 million bond measure to fund the improvements described above in this Chapter 6 (with the exception of portable facilities).

The District anticipates that it will enter into bond planning during the six year planning period and identify a proposed bond measure to fund some of the projects described above under "anticipated Future Bond Projects." The anticipated bond project proposals are subject to the District's Board of Directors deciding, via resolution, to send the proposal to the voters for consideration.

State School Construction Assistance

State School Construction Assistance funds come from the Common School Construction Fund. The State deposits revenue from the sale of renewable resources from State school lands set aside by the Enabling Act of 1889 into the Common School Account. If these sources are insufficient to meet needs, the Legislature can appropriate General Obligation Bond funds or the Superintendent of Public Instruction can prioritize projects for funding. School districts may qualify for State School Construction Assistance funds for specific capital projects based on a prioritization system. The District is eligible for State School Construction Assistance funds for certain projects at the 49.91% funding percentage level.

Impact Fees

Impact fees are a means of supplementing traditional funding sources for construction of public facilities needed to accommodate new development. School impact fees are generally collected by the permitting agency at the time plats are approved or building permits are issued.

Six Year Financing Plan

The Six-Year Financing Plan shown in Table 10 demonstrates how the District intends to fund new construction and improvements to school facilities for the years 2022-2027. The financing components include bond funds, impact fees, and school construction assistance funds. Projects and portions of projects which remedy existing deficiencies are not appropriate for impact fee funding. Thus, impact fees will not be used to finance projects or portions of projects which do not add capacity or which remedy existing deficiencies. See Chapter 5.

Alternative Actions

In the event that planned construction projects are not funded as expected or do not fully address space needs for student growth, the Board could consider various courses of action, including, but not limited to:

- Alternative scheduling options;
- Changes in the instructional model;
- Grade configuration changes;
- Increased class sizes; or
- Modified school calendar.
